

COSMO-ART

Status - Development - Application

Aerosols and Climate Processes, Institute for Meteorology and Climate Research - Troposphere

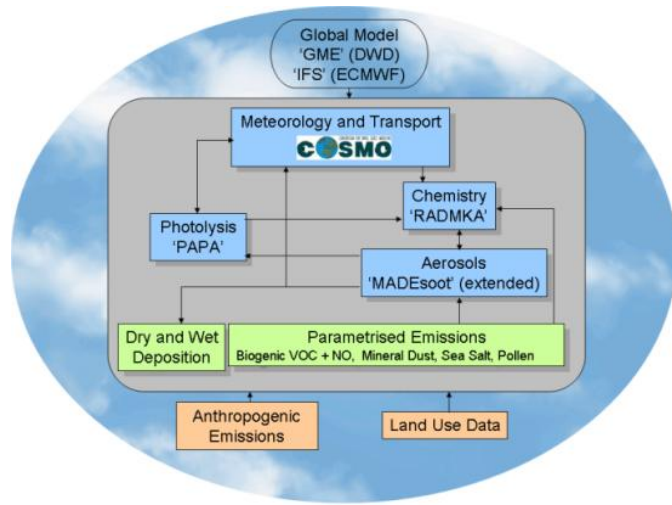

Acknowledgement:

We acknowledge all those who developed and are steadily improving the COSMO model

We appreciate the support by:

**U. Schättler, M. Baldauf, J. Förstner, A. Seifert, U. Blahak,
M. Raschendorfer**

The Model System COSMO-ART

Mineral dust modes

- Three modes

Sea salt modes

- Three modes,

$\text{Na}^+, \text{Cl}^-, \text{SO}_4^{2-}, \text{H}_2\text{O}$

+ volcanic ash and pollen

Gas phase chemistry

Interactive modes

- Two modes for $\text{SO}_4^{2-}, \text{NO}_3^-$, NH_4^+ , SOA, H_2O , internally mixed.

- One mode for pure soot.

- Two modes for $\text{SO}_4^{2-}, \text{NO}_3^-$, NH_4^+ , SOA, H_2O , soot, internally mixed.

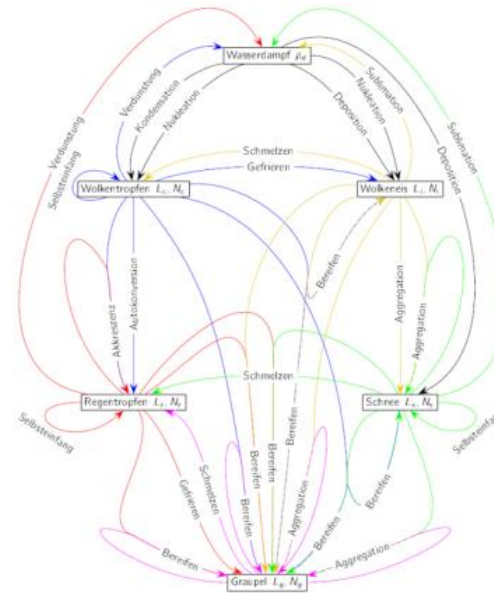

Cloud Microphysics (support by Axel and Uli B.)

Two Moment cloud microphysics (Seifert and Beheng, 2006)

- number and mass concentration of all hydrometeors

Six hydrometeor classes

- water droplets
- ice crystals
- rain droplets
- snow flakes
- graupel
- Hail

Parameterization of cloud optical properties

- function of cloud droplet and ice crystal number concentration
- long and short wave (Hu & Stamnes 1993, Edwards et al. 2007)

Aerosol-Cloud-Coupling in COSMO-ART

Ice Nucleation

(Barahona and Nenes 2009)

- competition of heterogeneous freezing involving dust with homogenous freezing of droplets

Aerosol Activation

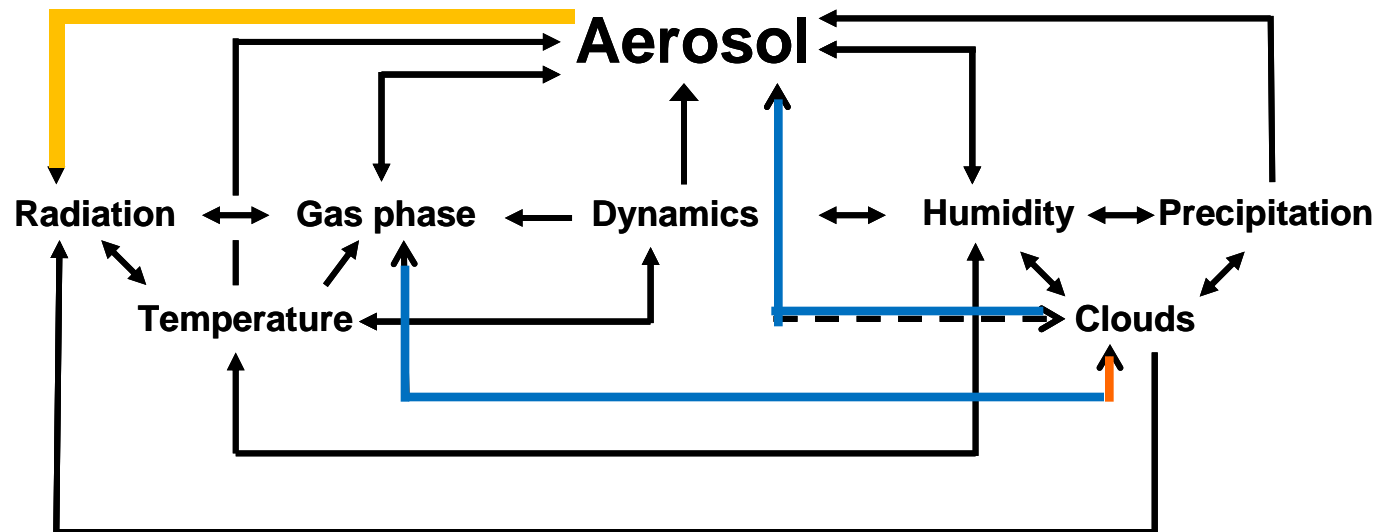

(Kumar et al. 2009, Barahona et al. 2010)

- adsorption activation of dust particles
- competition of the different aerosol particles for water vapor
- considering all simulated aerosol properties

Distribution of subgrid scale updrafts

- mean = grid scale updraft
- standard deviation = \sqrt{TKE}

Feedback processes realized in COSMO-ART

— cloud processes

Comparison of scaled simulated number concentrations with observations at MO Hohenpeißenberg (Flentje et al. 2010)

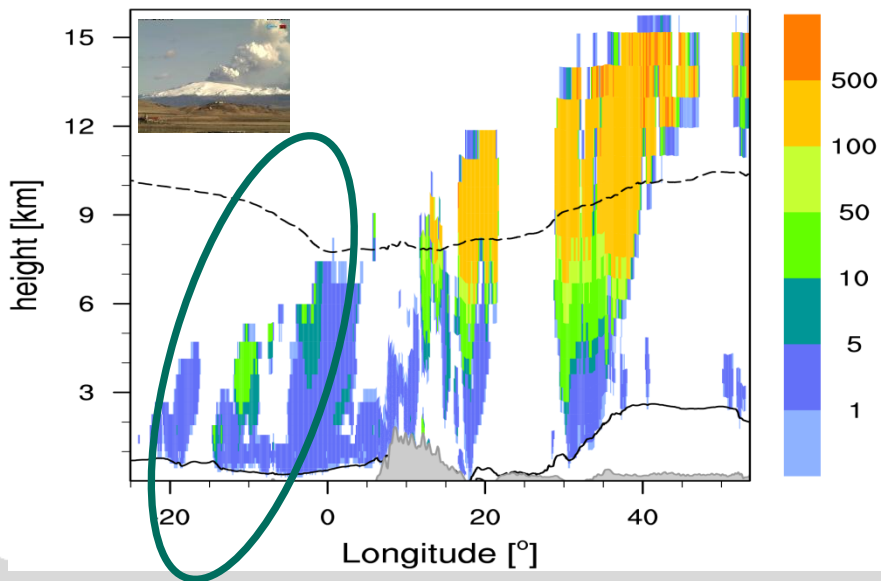

number density of ash particles

difference of ice crystals

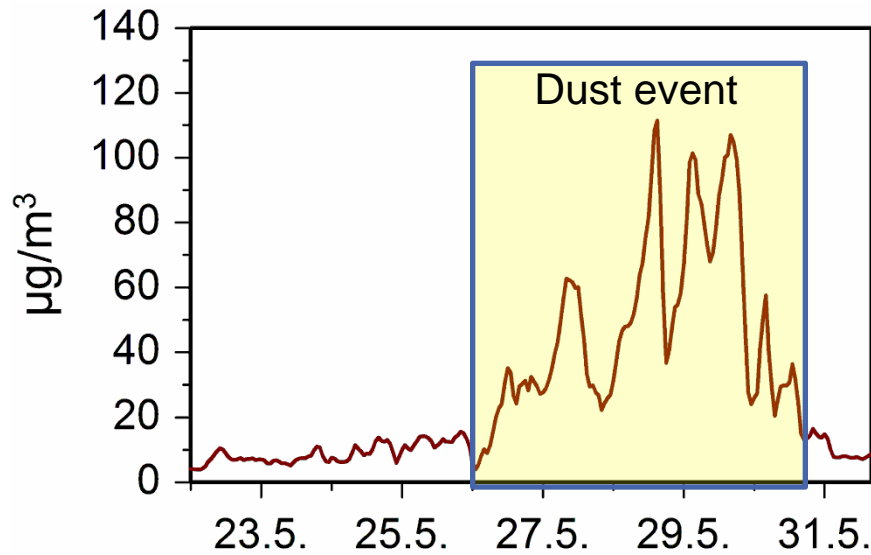

ice crystal number concentration [L⁻¹]

ice crystal number concentration [L⁻¹]

Observed aerosol mass concentration at Hohenpeissenberg
(Data: H. Flentje, DWD)

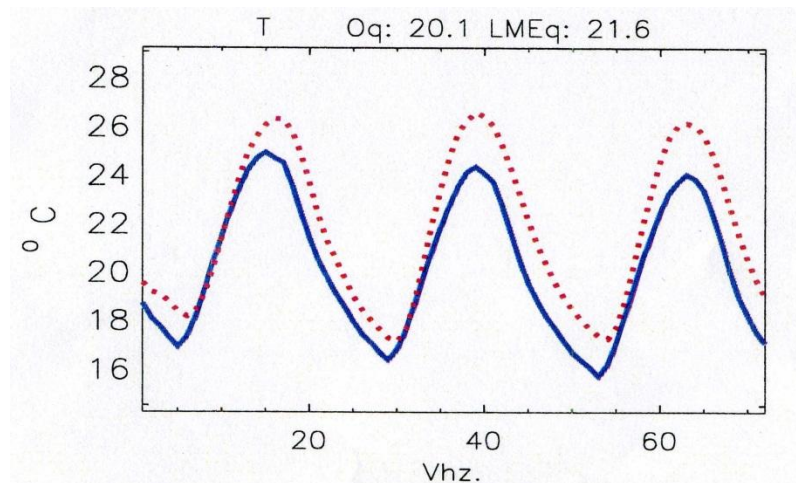

Meteosat picture, 28 May, 2008, 12:00 UTC

May 2008

- A **positive temperature bias** was detected in the operational weather forecast by the DWD during the dust event.

26.05.2008 – 30.05.2008

Observed (blue line) and predicted (dotted red line)
 2m-temperatures for SW-Germany (Data: U. Damrath, DWD)

Can the bias be explained by the interaction of dust with the atmosphere?

2-m Temperatures

Average over SW-Germany

season is taken into account, too. Towards the end of the pollen season less pollen are emitted. The end of flowering is calculated using a temperature model as well.

The important advantage of the new birch pollen forecasts is the complete spatial coverage of Switzerland

Operational use of COSMO-ART for UAE

Simulated mass concentration, 4-6 February 2010
