

KENDA and physics perturbations / model error in experimental COSMO-DE-EPS

-- WG 7 parallel session --

Richard Keane, Ekaterina Machulskaya,
Regina Kohlhepp, Christoph Gebhardt

Deutscher Wetterdienst, DWD

Outline

→ operational set up & changes since last COSMO GM

→ TIGGE-LAM (including COSMO-DE-EPS)

→ KENDA in COSMO-DE-EPS

→ model uncertainty in COSMO-DE-EPS

experimental

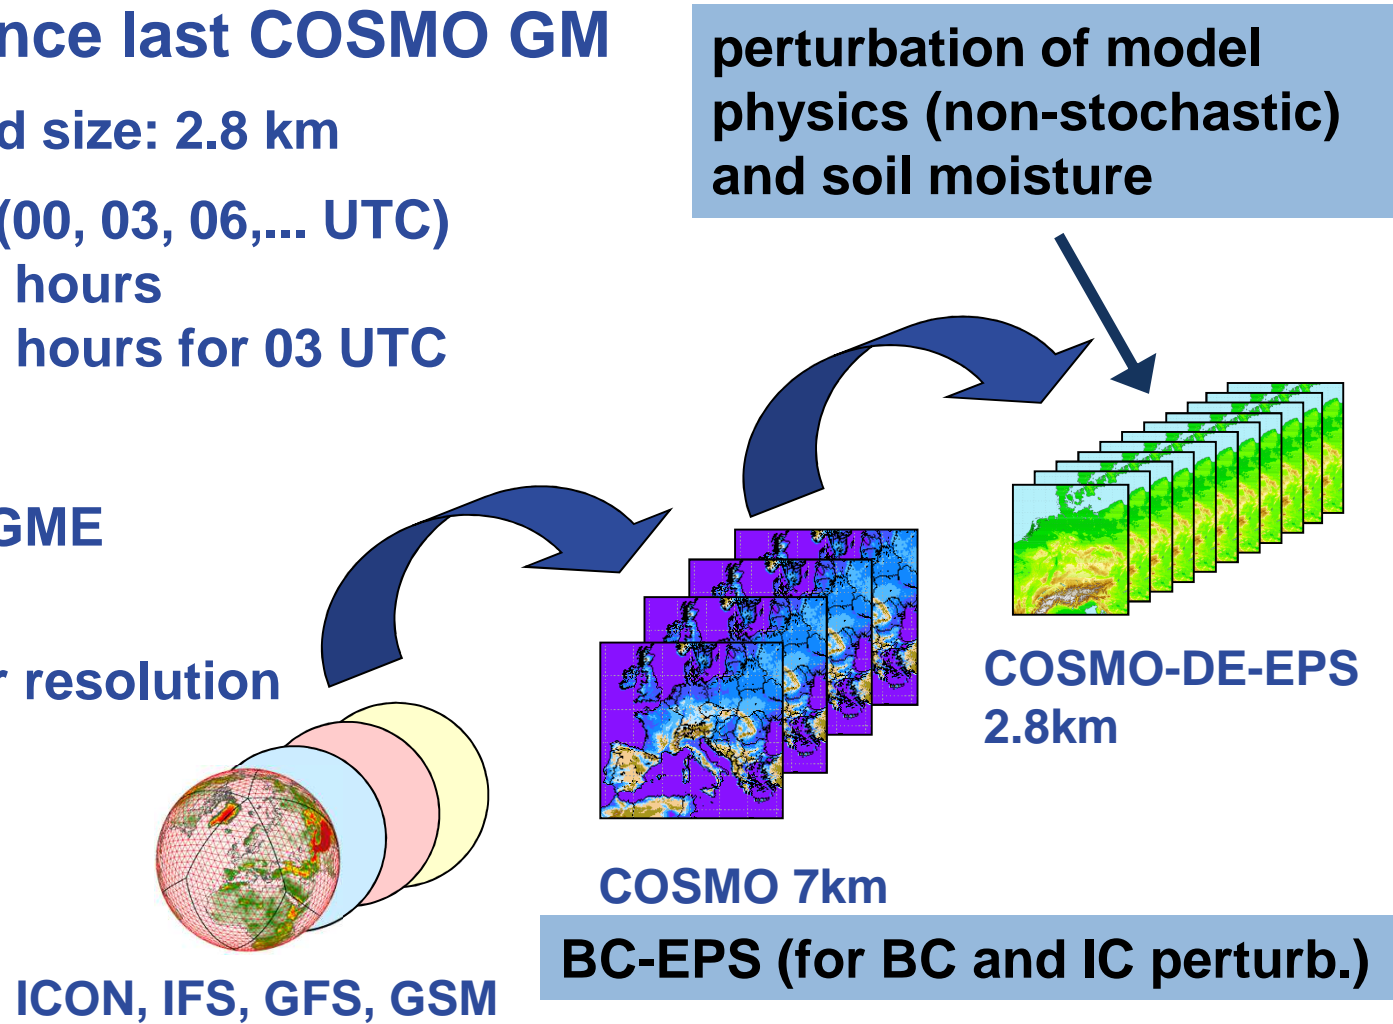

→ other research topics

→ upcoming changes

COSMO-DE-EPS operational set-up & changes since last COSMO GM

- 20 members, grid size: 2.8 km
- 8 starts per day (00, 03, 06,... UTC)
lead time: 0 - 27 hours
0 - 45 hours for 03 UTC

- ICON replaced GME (Jan. 2015)
- GFS with higher resolution (Jan. 2015)

Contribution to TIGGE-LAM data set

- COSMO-DE-EPS available since 1st Jan 2014
- 00, 06, 12, 18 UTC
- selected variables of all members with 27h forecast range
- including COSMO-LEPS and LAM-EPS versions of

ALADIN

HIRLAM

MOGREPS

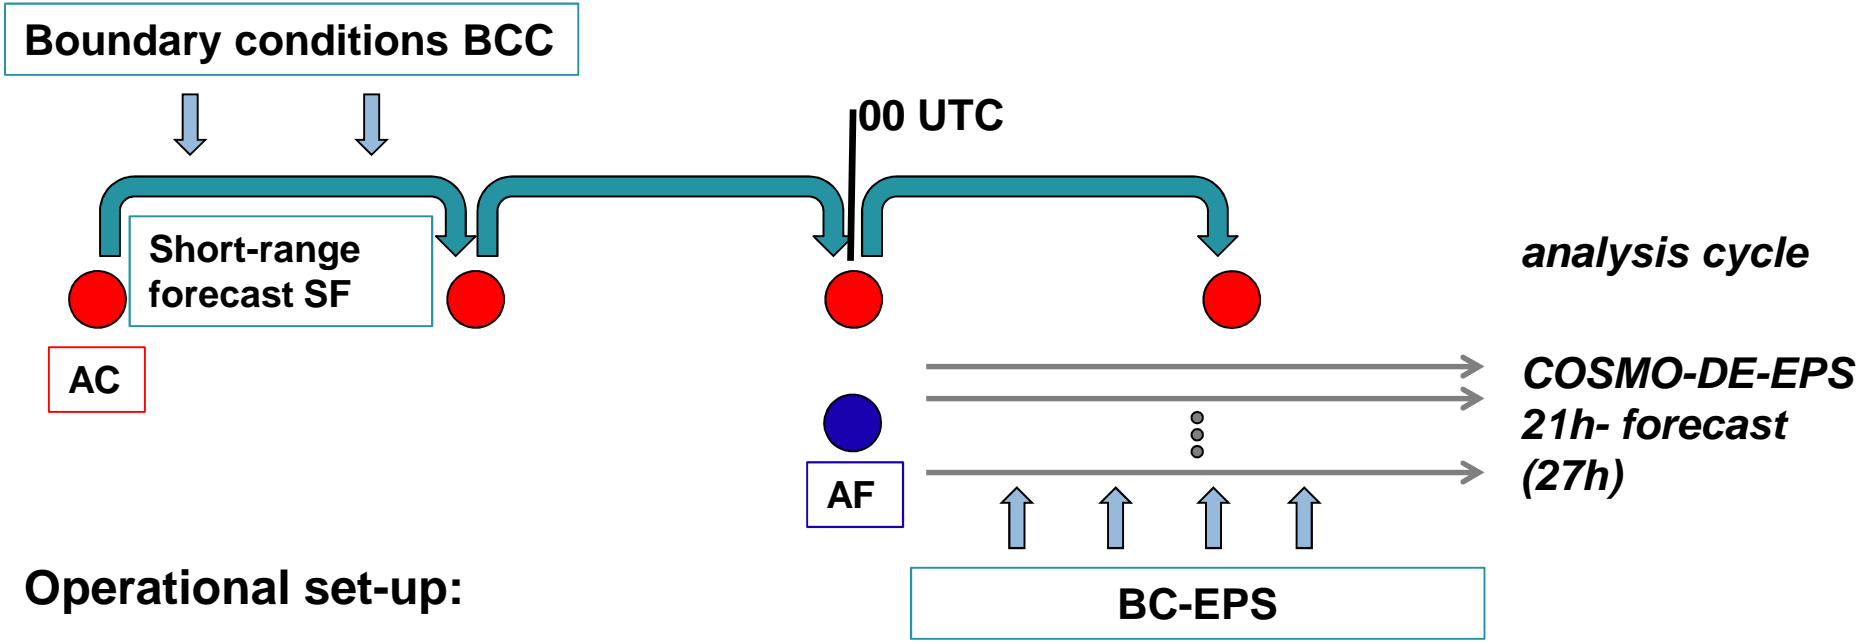

PEARP

KENDA in COSMO-DE-EPS

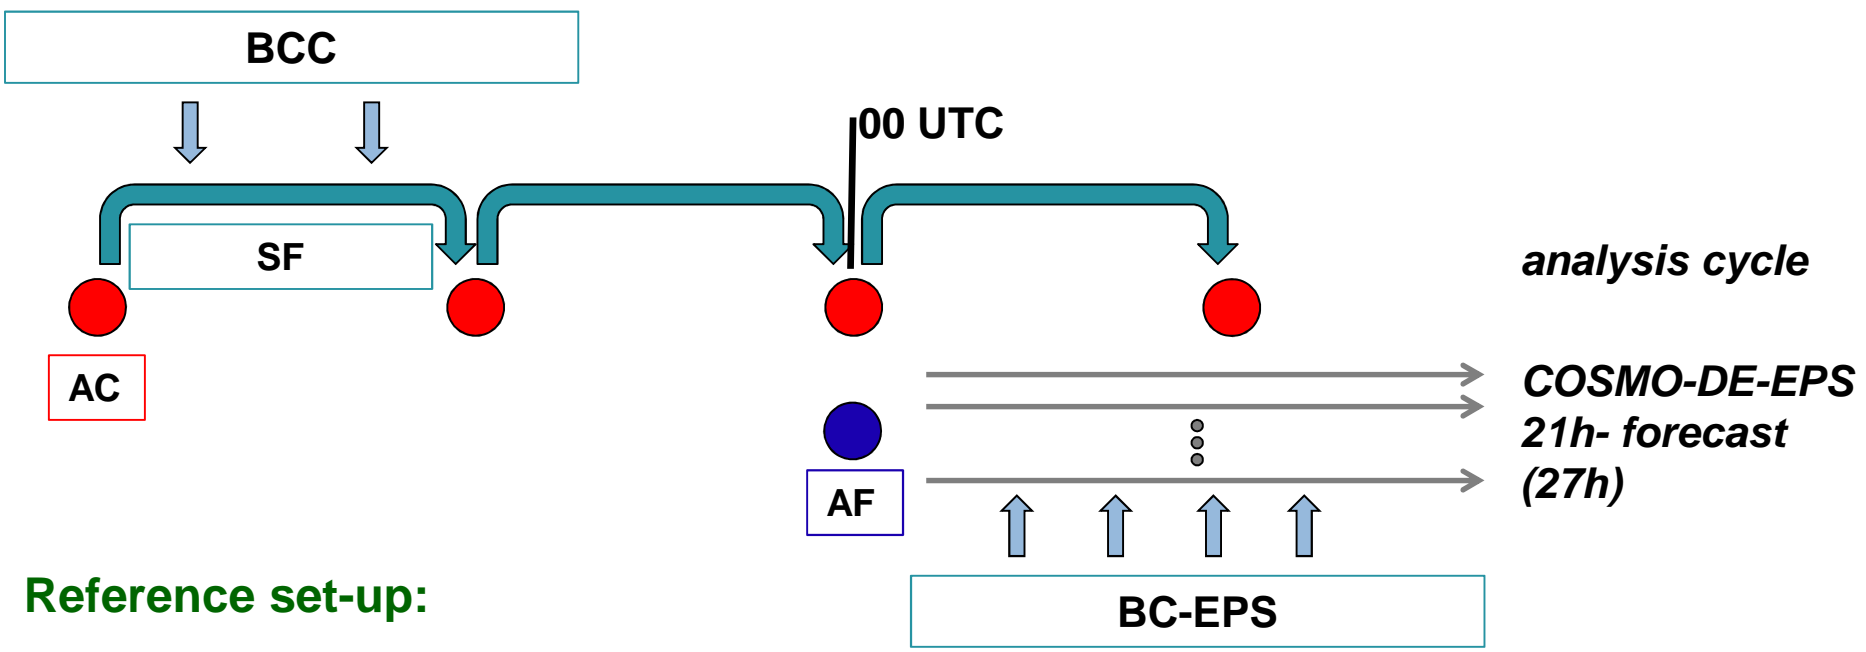

Operational set-up:

- AC = Nudging
- SF = COSMO-DE
- BCC = COSMO-EU
- AF = Nudging + BC-EPS perturbations

KENDA in COSMO-DE-EPS

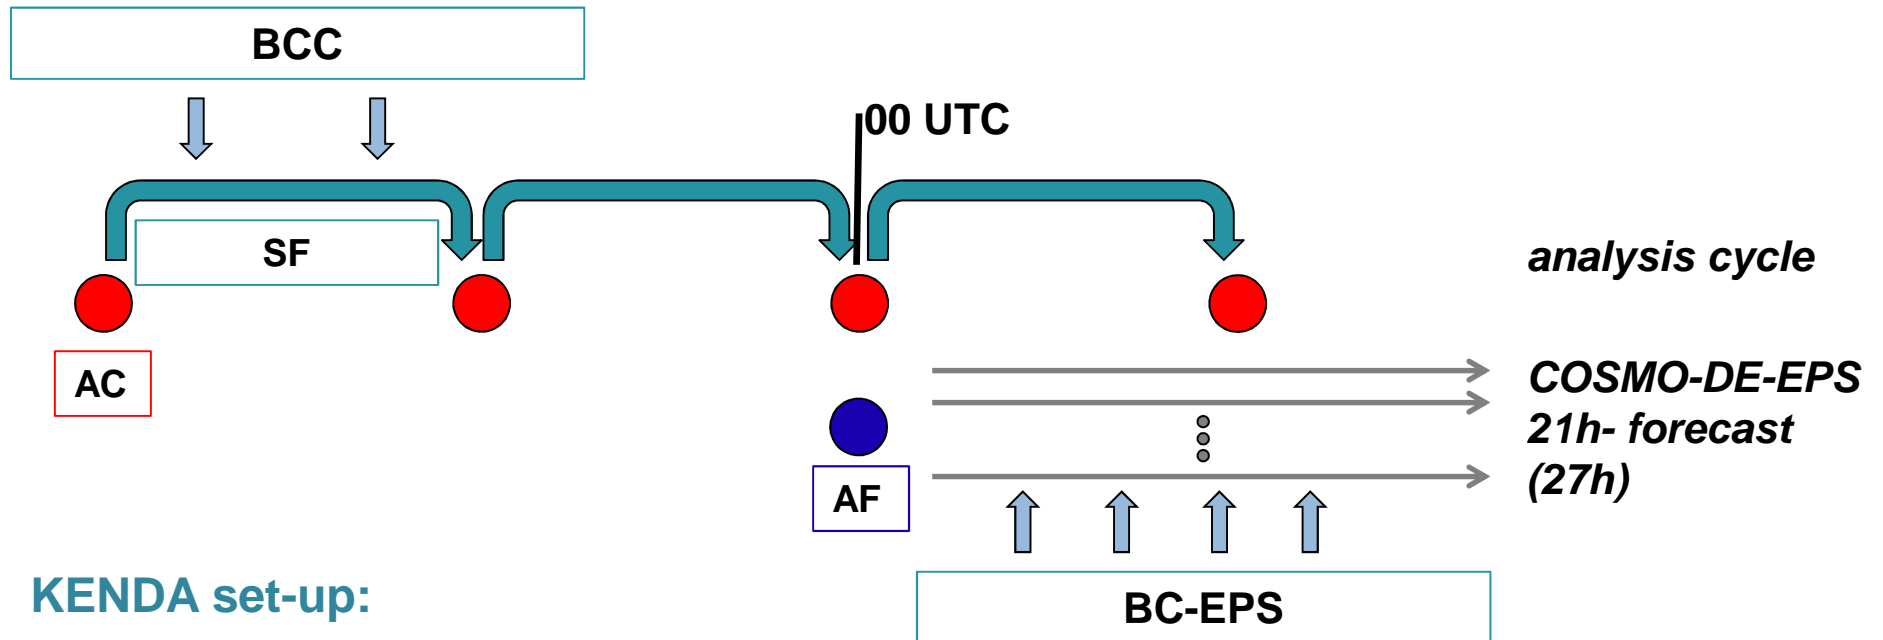

Reference set-up:

- AC = Nudging
- SF = COSMO-DE
- BCC = ICON 80km** ←
- AF = Nudging + BC-EPS perturbations

KENDA in COSMO-DE-EPS

KENDA set-up:

AC = KENDA

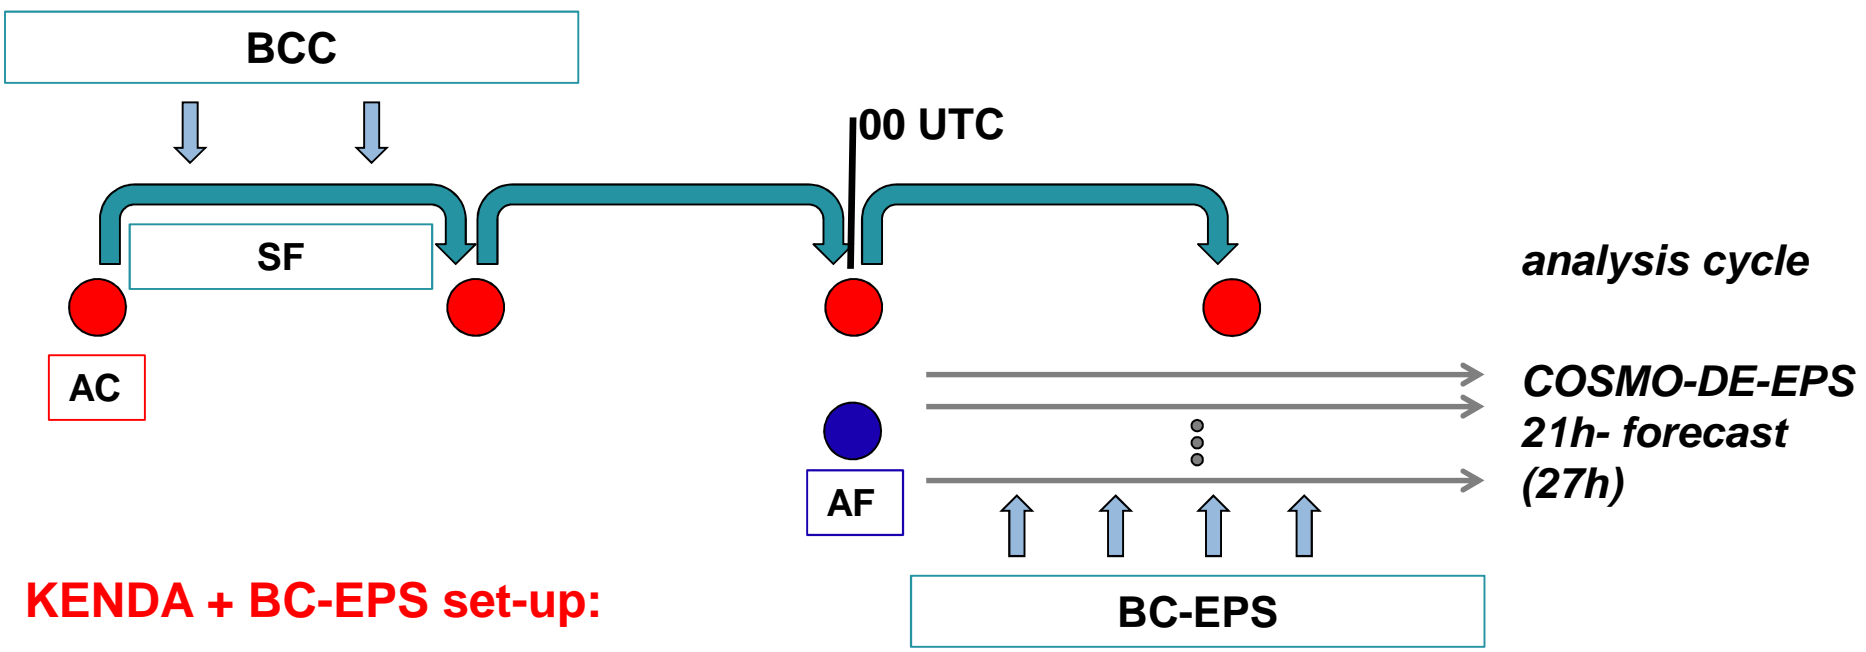

SF = 20 members on 2.8km

BCC = ICON+LETKF 80km (20 members)

AF = Ensemble Kalman filter

KENDA in COSMO-DE-EPS

KENDA + BC-EPS set-up:

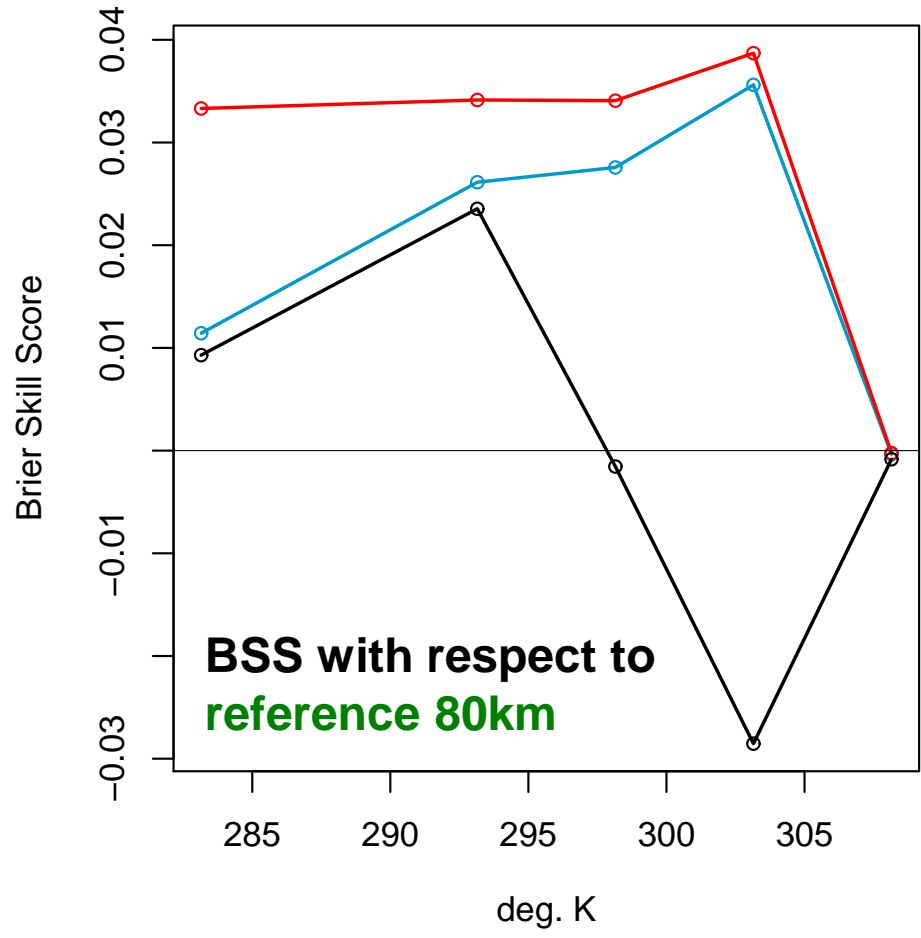

- AC = KENDA**
- SF = 15 members + „KENDA deterministic“**
- BCC = ICON+LETKF 80km**
- AF = Ensemble Kalman filter + BC-EPS perturb.**

Model error / physics perturbations

- EM-scheme – a model for the model error
- SPPT
- randomly perturbed parameters
- combined parameter perturbations + randomization

EM-scheme – a model for the model error (E. Machulskaya)

$$\frac{\partial \psi}{\partial t} = \left[\frac{\partial \psi}{\partial t} \right]_{\text{det}} + \eta(t) \qquad \frac{\partial \eta}{\partial t} = -\gamma \eta + \gamma \lambda^2 \nabla^2 \eta + \sigma \xi(t)$$

ψ : prognostic variables (T, QV, U, V)

$\eta(t)$: noise field / model error, correlated in time and space

$\xi(t)$: Gaussian noise

γ, λ, σ : standard deviation and spatial and temporal correlation

γ, λ and σ are weather-dependent and are derived from past data.

Potential predictors are $\left| \frac{dT}{dt} \right|, |U|, \text{cl.cover}, \left| \frac{dq}{dt} \right|$
for different model levels („offline“ training).

SPPT

$$\frac{\partial \psi}{\partial t} = \left[\frac{\partial \psi}{\partial t} \right]_{\text{det}} + \eta(t) * \left[\frac{\partial \psi}{\partial t} \right]_{\text{det}}$$

ψ : prognostic variables

noise field $\eta(t)$

- random number field on a coarse grid
interpolated onto the COSMO grid
- spatial correlation scale: 5.0 degrees
- temporal correlation scale: 6 hours
- standard deviation: 1.0

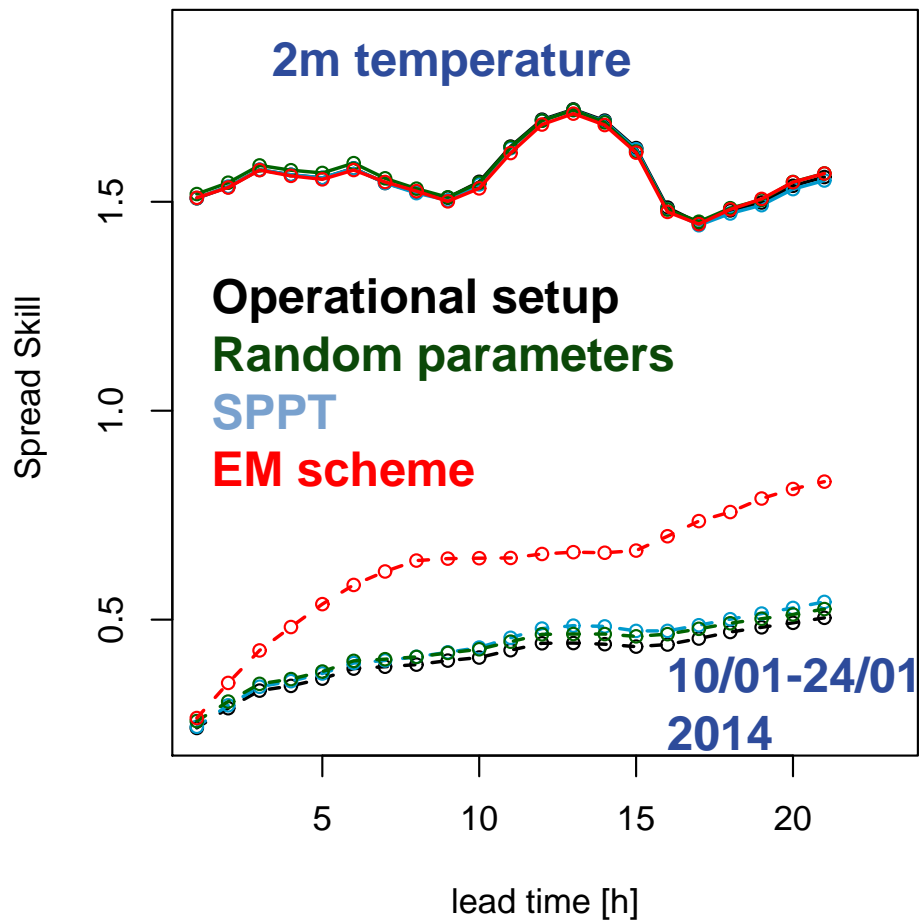

Randomly perturbed parameters

- operational COSMO-DE-EPS:
fixed parameter perturbations
- modification:
randomly select either the default value or the fixed perturbed
value (each with 50% chance)
- done for each forecast start, not changed during forecast

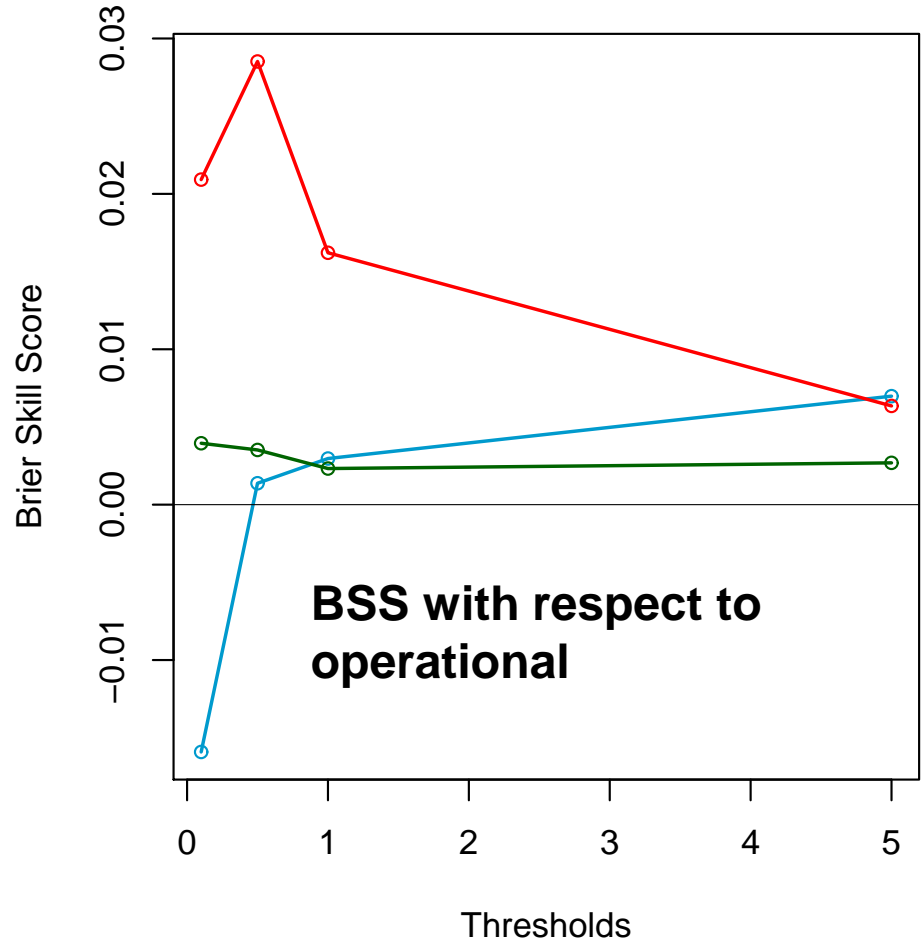

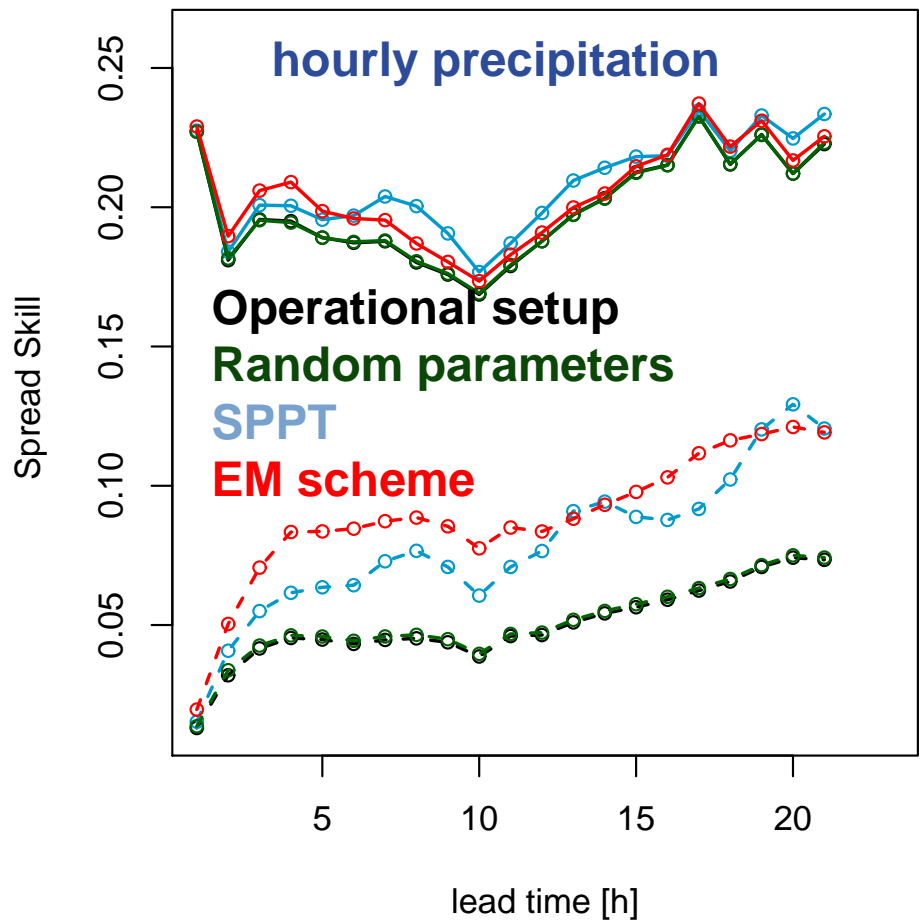

Model error / physics perturbations

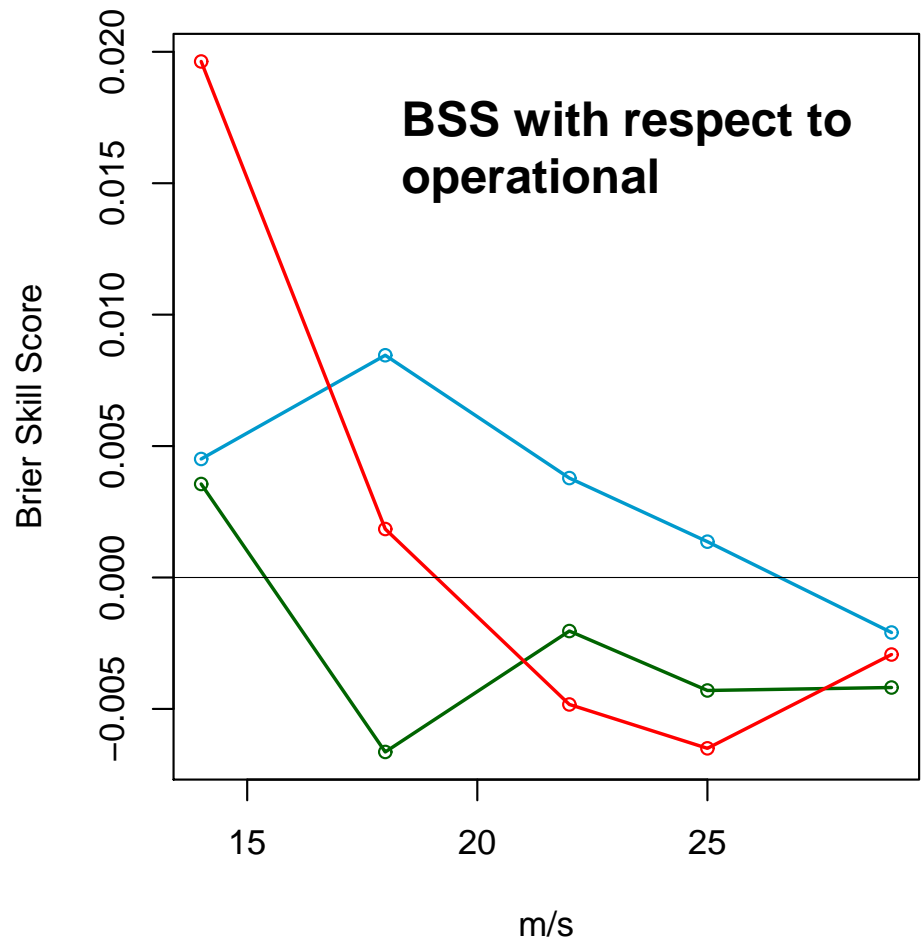

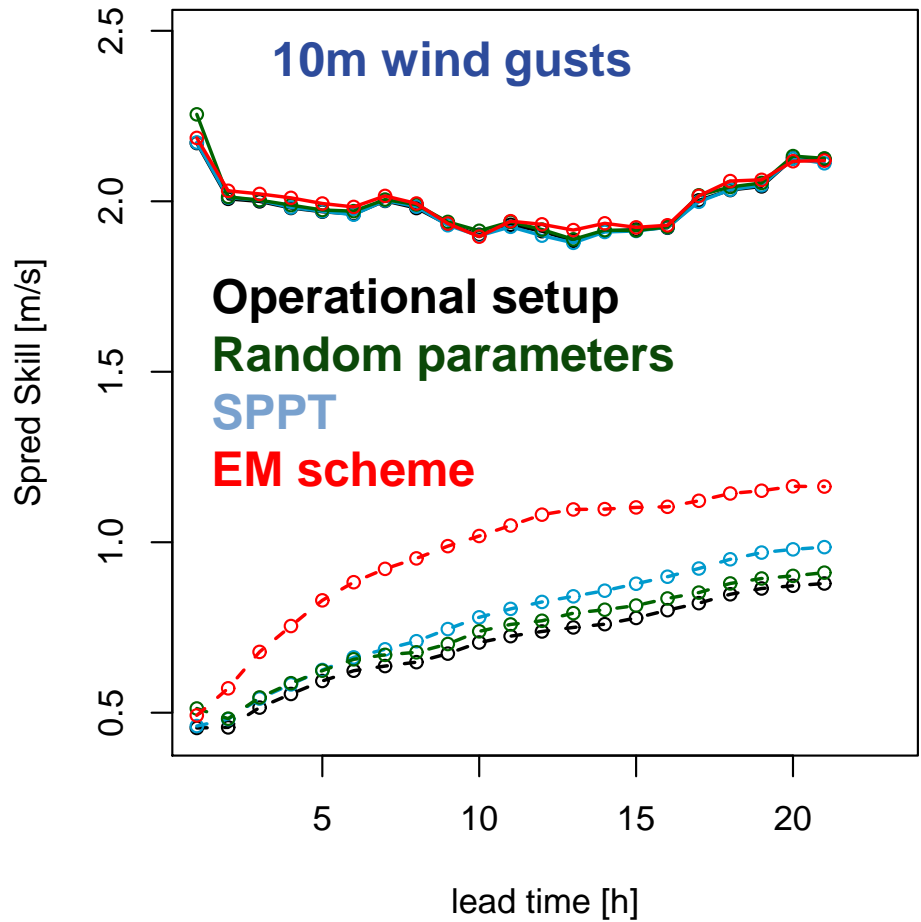

Model error / physics perturbations

Model error / physics perturbations

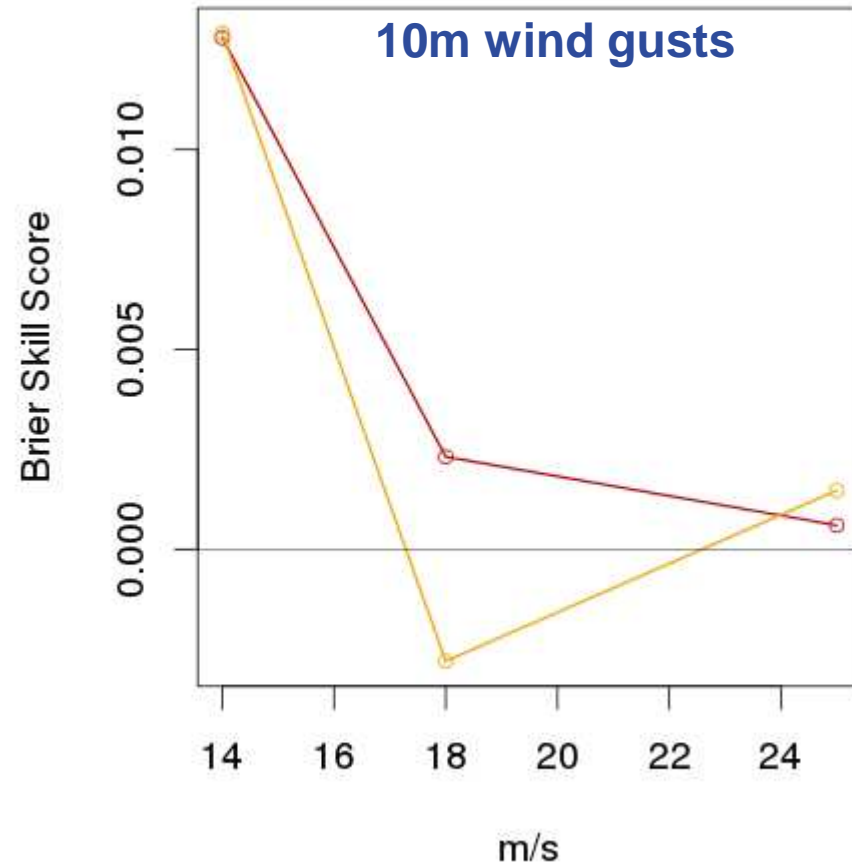

Combined parameter perturbations + randomization

ORKA project
Regina Kohlhepp

- more parameter perturbations
(focus on renewable energy applications: radiation, wind at hub heights:
radqx_fact, thick_sc, c_diff, a_stab)
optimized combination of perturbations (criterion: CRPS)
red line in following plot
- randomly select a combination of all parameters and additionally apply the random value approach
(done for each forecast start, not changed during forecast)
dark yellow line in following plot

Model error / physics perturbations

ORKA project
Regina Kohlhepp

Other research topics

- extension of COSMO-DE-EPS to 40 members
BC perturbations as combination of multi-model/single-model EPS

BC-EPS \pm COSMO-LEPS anomalies

- parameter perturbations
e.g. $r_{lam_heat} \times rat_sea = const.$
for consistency of T_{2M} spread over land and sea
- dependence of minimum diffusion (tkh_{min}) on stability and the effect on COSMO-DE-EPS

Upcoming changes

- KENDA operational (second half of 2016)
- COSMO-D2-EPS
with 2.2km, 65 levels, westward extension of model domain
(second half of 2016)
- 40 members (2016/17)
- ICON-EPS as BC for COSMO-DE-EPS (not before 2017)
