

Overview of Italian verification

Naima Vela
Elena Oberto

This work has been done with the collaboration and the funds of Civil Protection Department. Furthermore thanks again to Civil Protection Department for making available the high resolution rain gauges dataset usefull for the verification tools.

Cosmo General Meeting 2016 – Offenbach

The methodology

Precipitation- high resolution network

- Common area → Italy
- Dataset → high res raingauges
- Method → 24h/6h averaged cumulated precipitation or maximum values (both observed and forecasted) over meteo-hydrological basins

LONG TREND PRECIPITATION with high resolution stations

BIAS run 00 th= 0.2 mm/24h time=0024

LOW THRESHOLDS

- Ecmwf overestimation
- Summer overestimation
- Reduction of the overestimation for LAM

BIAS run 00 th= 0.2 mm/24h time=2448

- Ecmwf overestimation
- Reduction of bias
- Increasing winter underestimation

LONG TREND PRECIPITATION with high resolution stations

BIAS run 00 th= 20 mm/24h time=0024

HIGH THRESHOLDS

- General underestimation, especially 7, EU
- Different behavior

BIAS run 00 th= 20 mm/24h time=2448

- General overestimation
- ECMWF and 7 underestimation

LONG TREND PRECIPITATION with high resolution stations

ETS run 00 th= 0.2 mm/24h time=0024

LOW THRESHOLDS

- Very slightly positive/steady trend
- Good ME,7
- Big seasonal oscillation
- LAM perform better than ECMWF

ETS run 00 th= 0.2 mm/24h time=2448

LONG TREND PRECIPITATION with high resolution stations

ETS run 00 th= 20 mm/24h time=0024

HIGH THRESHOLDS

- Very slightly positive trend
- Big seasonal oscillation
- ECMWF often performs better than LAM

ETS run 00 th= 20 mm/24h time=2448

201506- 201605: Average over area > 0.2 mm/24h

- ECMWF -> overestimation

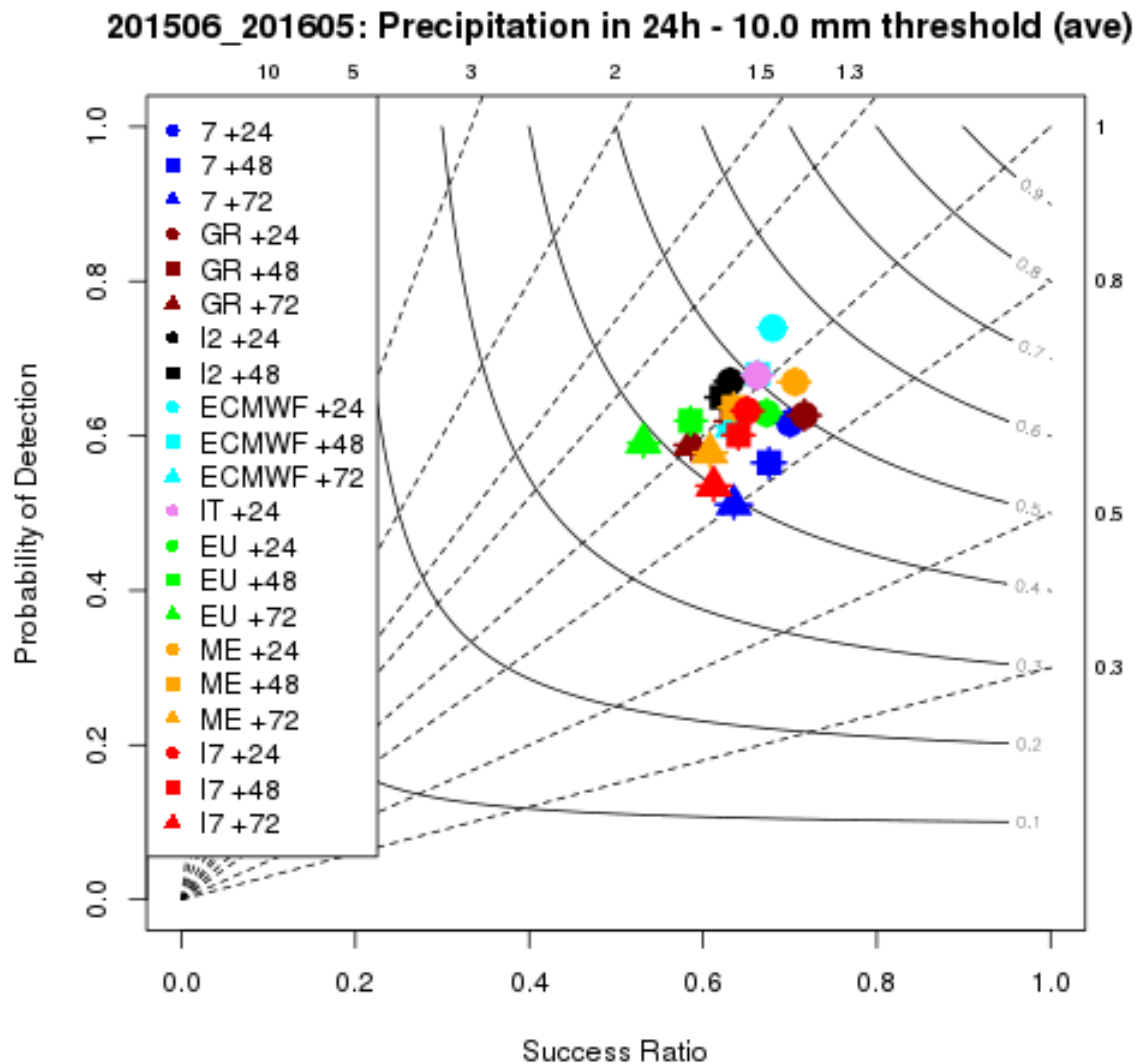

201506- 201605: Average over area > 2 mm/24h

201506_201605: Precipitation in 24h - 2.0 mm threshold (ave)

Ecmwf → overestimation
 IT, ME, I2, I7 → good

201506- 201605: Average over area > 10 mm/24h

- ECMWF -> best performance

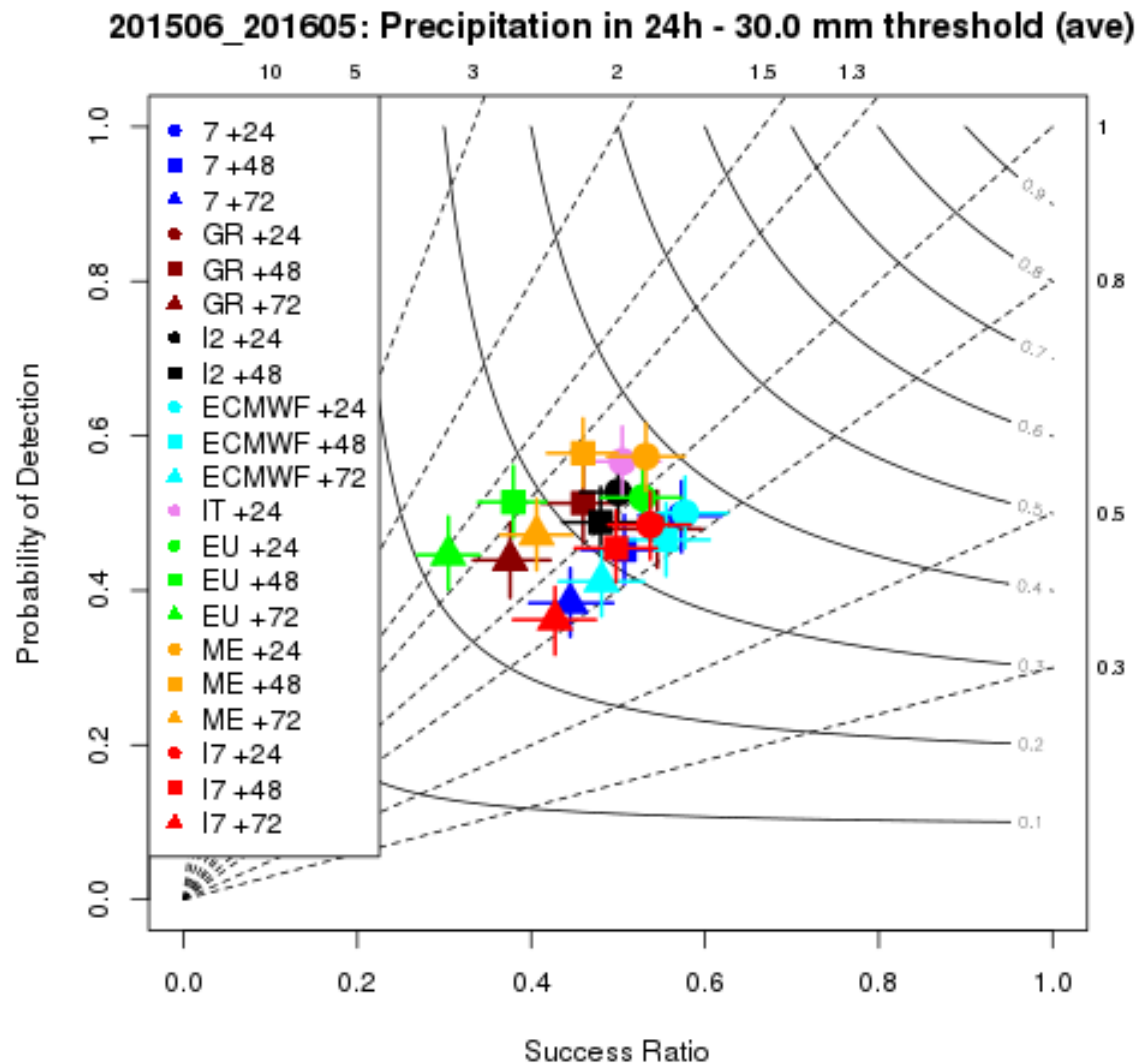

201506- 201605: Average over area > 20 mm/24h

201506_201605: Precipitation in 24h - 20.0 mm threshold (ave)

Ecmwf -> best
 ME, I2,
 I7,GR,IT, EU ->
 good
 7 -> lower
 skills

201506- 201605: Average over area > 30 mm/24h

ME, I2, IT, EU → good

I7, 7, ecmwf → underestimation

201506- 201605: Average over area > 50 mm/24h

201506_201605: Precipitation in 24h - 50.0 mm threshold (ave)

ME, EU → best
IT → good
7, I7, GR,
ecmwf → low
skills/underesti
mation

201506-201605: Maximum over area > 0.2 mm/24h

201506_201605: Precipitation in 24h - 0.2 mm threshold (max)

ecmwf → good
 other →
 underestimation

ECMWF -> best performance

201506-201605: Maximum over area > 2 mm/24h

201506_201605: Precipitation in 24h - 2.0 mm threshold (max)

Same behaviour for all models

201506-201605: Maximum over area > 10 mm/24h

201506_201605: Precipitation in 24h - 10.0 mm threshold (max)

Split into 2 groups:

1) 2,8km overestimation

2) Ecmwf and 7km underestimator

201506-201605: Maximum over area > 20 mm/24h

201506_201605: Precipitation in 24h - 20.0 mm threshold (max)

Split into 3 groups:

1) 2,8km overestimation

2) 7km below but close to bisector

3) ecmwf underestimator

201506-201605: Maximum over area > 30 mm/24h

201506_201605: Precipitation in 24h - 30.0 mm threshold (max)

Split into 3 groups:

1) 2,8km overestimation

2) 7km below but close to bisector

3) ecmwf underestimator

201306-201406: Maximum over area > 50 mm/24h

201506_201605: Precipitation in 24h - 50.0 mm threshold (ave)

ME, EU -> best

IT -> good

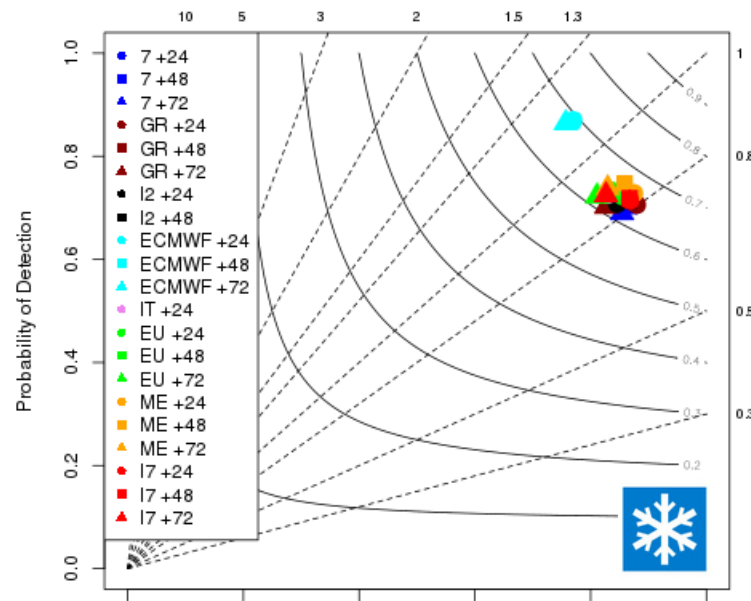

Other LAM -> underestimation

Ecmwf -> worse

201506_201508: Precipitation in 24h - 0.2 mm threshold (ave)

201512_201602: Precipitation in 24h - 0.2 mm threshold (ave)

Average over area > 0.2 mm/24h

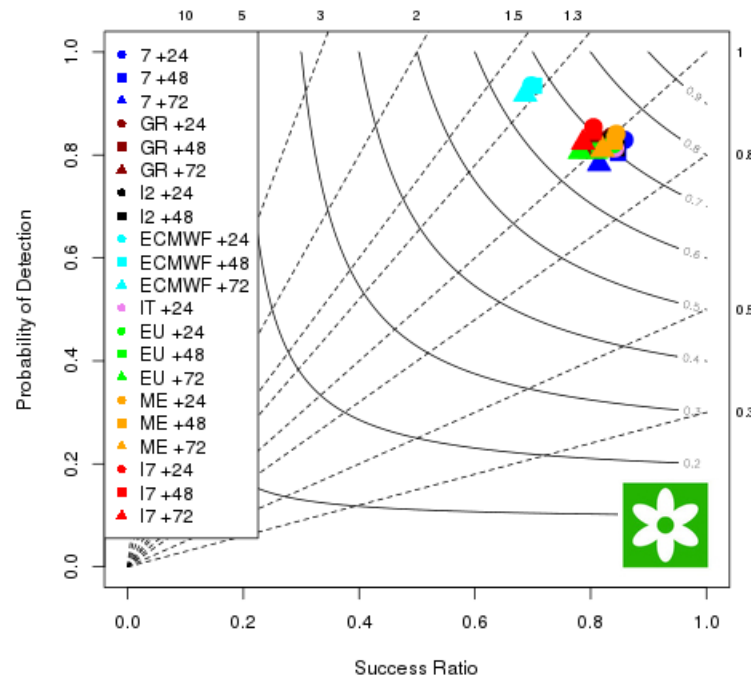

ecmwf → overestimation

other → underestimation for SON15 and DJF16

201509_201511: Precipitation in 24h - 0.2 mm threshold (ave)

201603_201605: Precipitation in 24h - 0.2 mm threshold (ave)

201506_201508: Precipitation in 24h - 2.0 mm threshold (ave)

201512_201602: Precipitation in 24h - 2.0 mm threshold (ave)

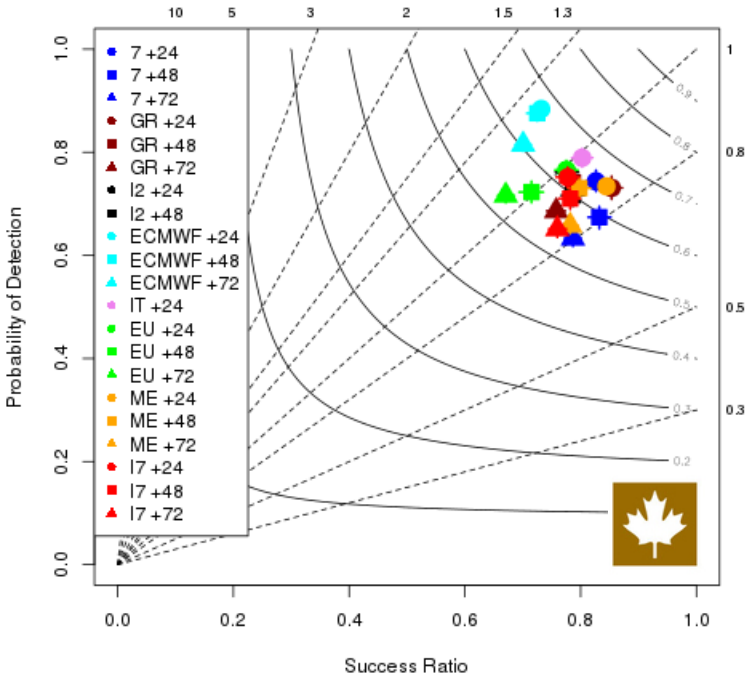

Average over area > 2 mm/24h

ecmwf → overestimation

Jja15 → low skill

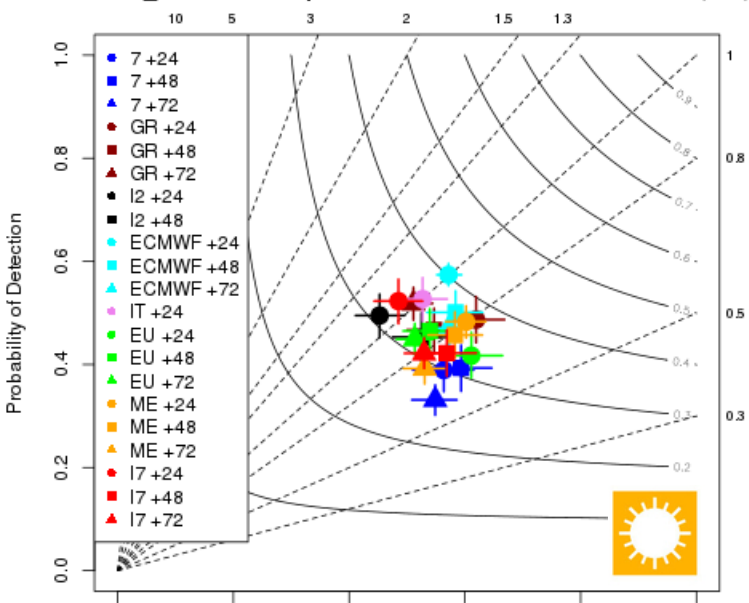

201509_201511: Precipitation in 24h - 2.0 mm threshold (ave)

201603_201605: Precipitation in 24h - 2.0 mm threshold (ave)

201506_201508: Precipitation in 24h - 10.0 mm threshold (ave)

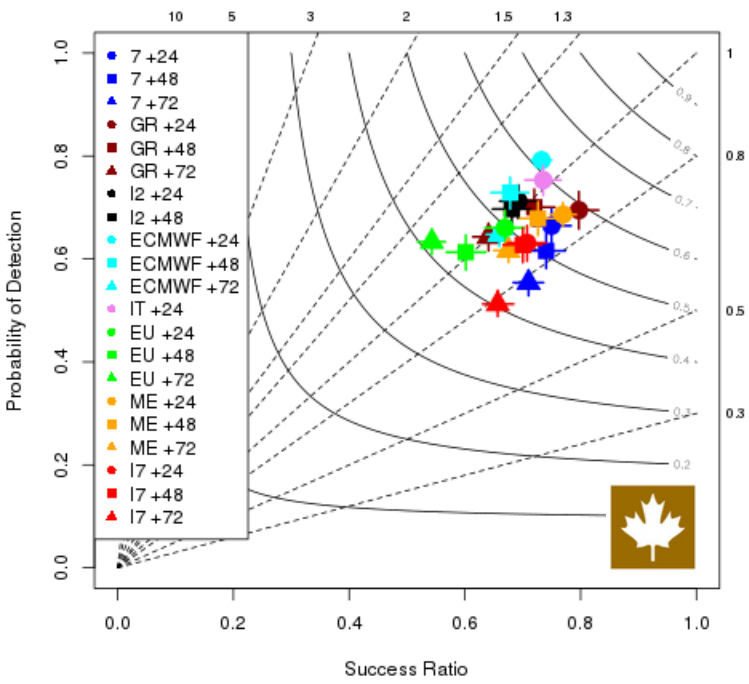

201512_201602: Precipitation in 24h - 10.0 mm threshold (ave)

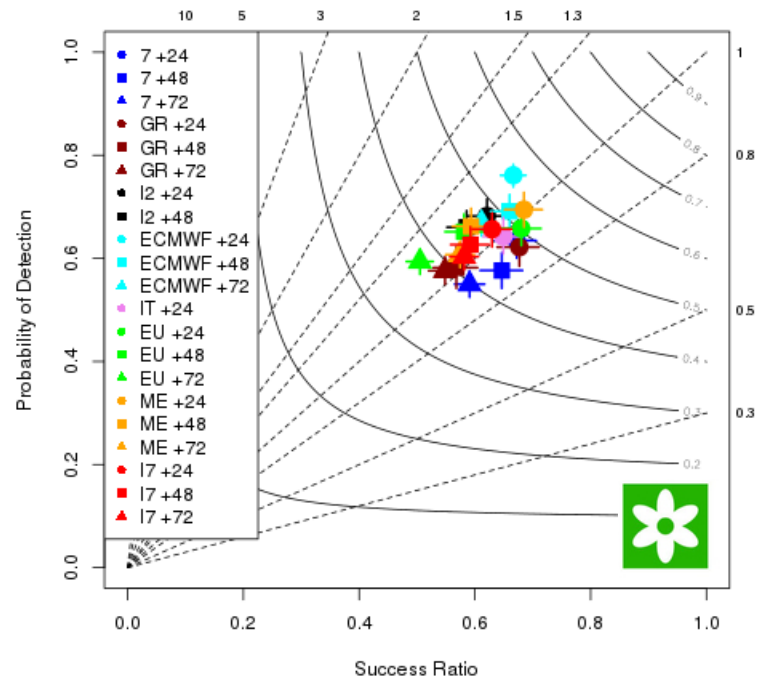

Average over area > 10 mm/24h

Good behaviour for ECMWF

201509_201511: Precipitation in 24h - 10.0 mm threshold (ave)

201603_201605: Precipitation in 24h - 10.0 mm threshold (ave)

Jja15 -> low skill

201506_201508: Precipitation in 24h - 20.0 mm threshold (ave)

201512_201602: Precipitation in 24h - 20.0 mm threshold (ave)

Average over area > 20 mm/24h

Similar behaviour for all models
Jja15 -> low skill

201509_201511: Precipitation in 24h - 20.0 mm threshold (ave)

201603_201605: Precipitation in 24h - 20.0 mm threshold (ave)

Better performance during winter

201506_201508: Precipitation in 24h - 30.0 mm threshold (ave)

201512_201602: Precipitation in 24h - 30.0 mm threshold (ave)

Average over area > 30 mm/24h

Jja15 -> low skill

Djf16 -> best skill

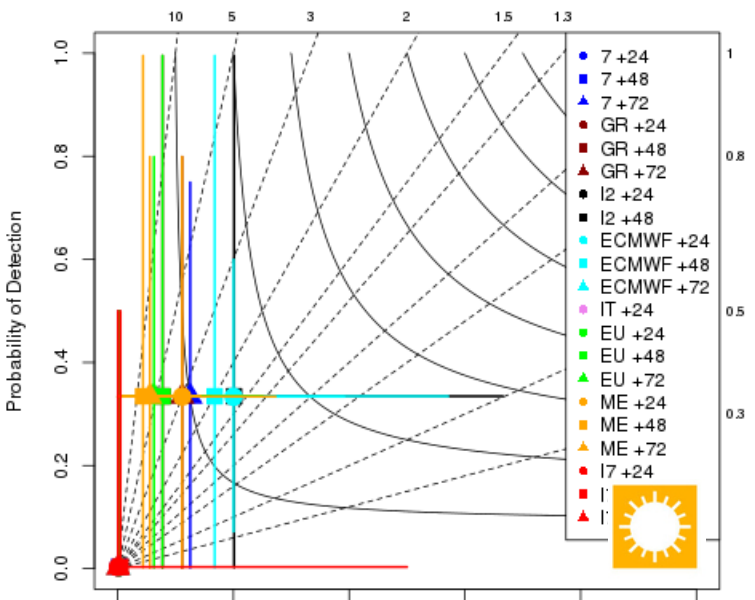

201509_201511: Precipitation in 24h - 30.0 mm threshold (ave)

201603_201605: Precipitation in 24h - 30.0 mm threshold (ave)

201506_201508: Precipitation in 24h - 50.0 mm threshold (ave)

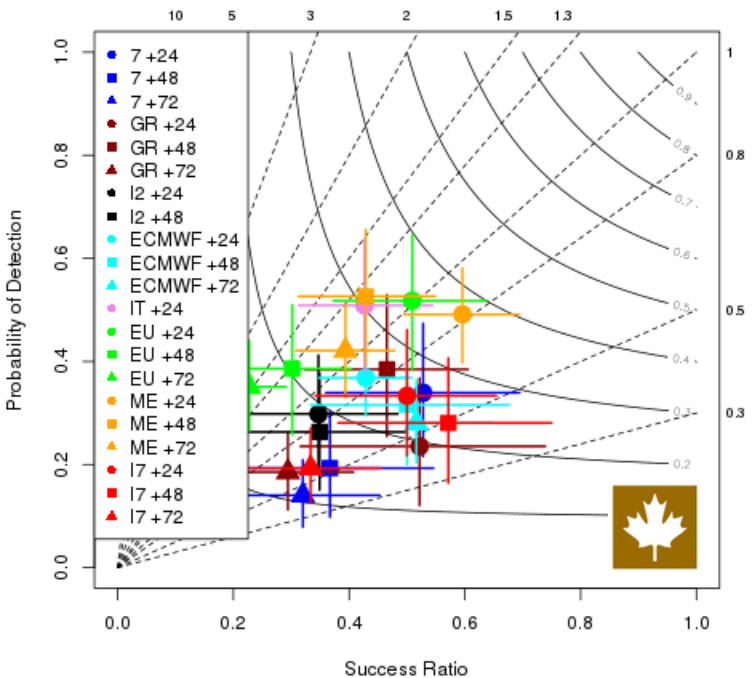

201509_201511: Precipitation in 24h - 50.0 mm threshold (ave)

Average over area > 50 mm/24h

201509_201511: Precipitation in 24h - 50.0 mm threshold (ave)

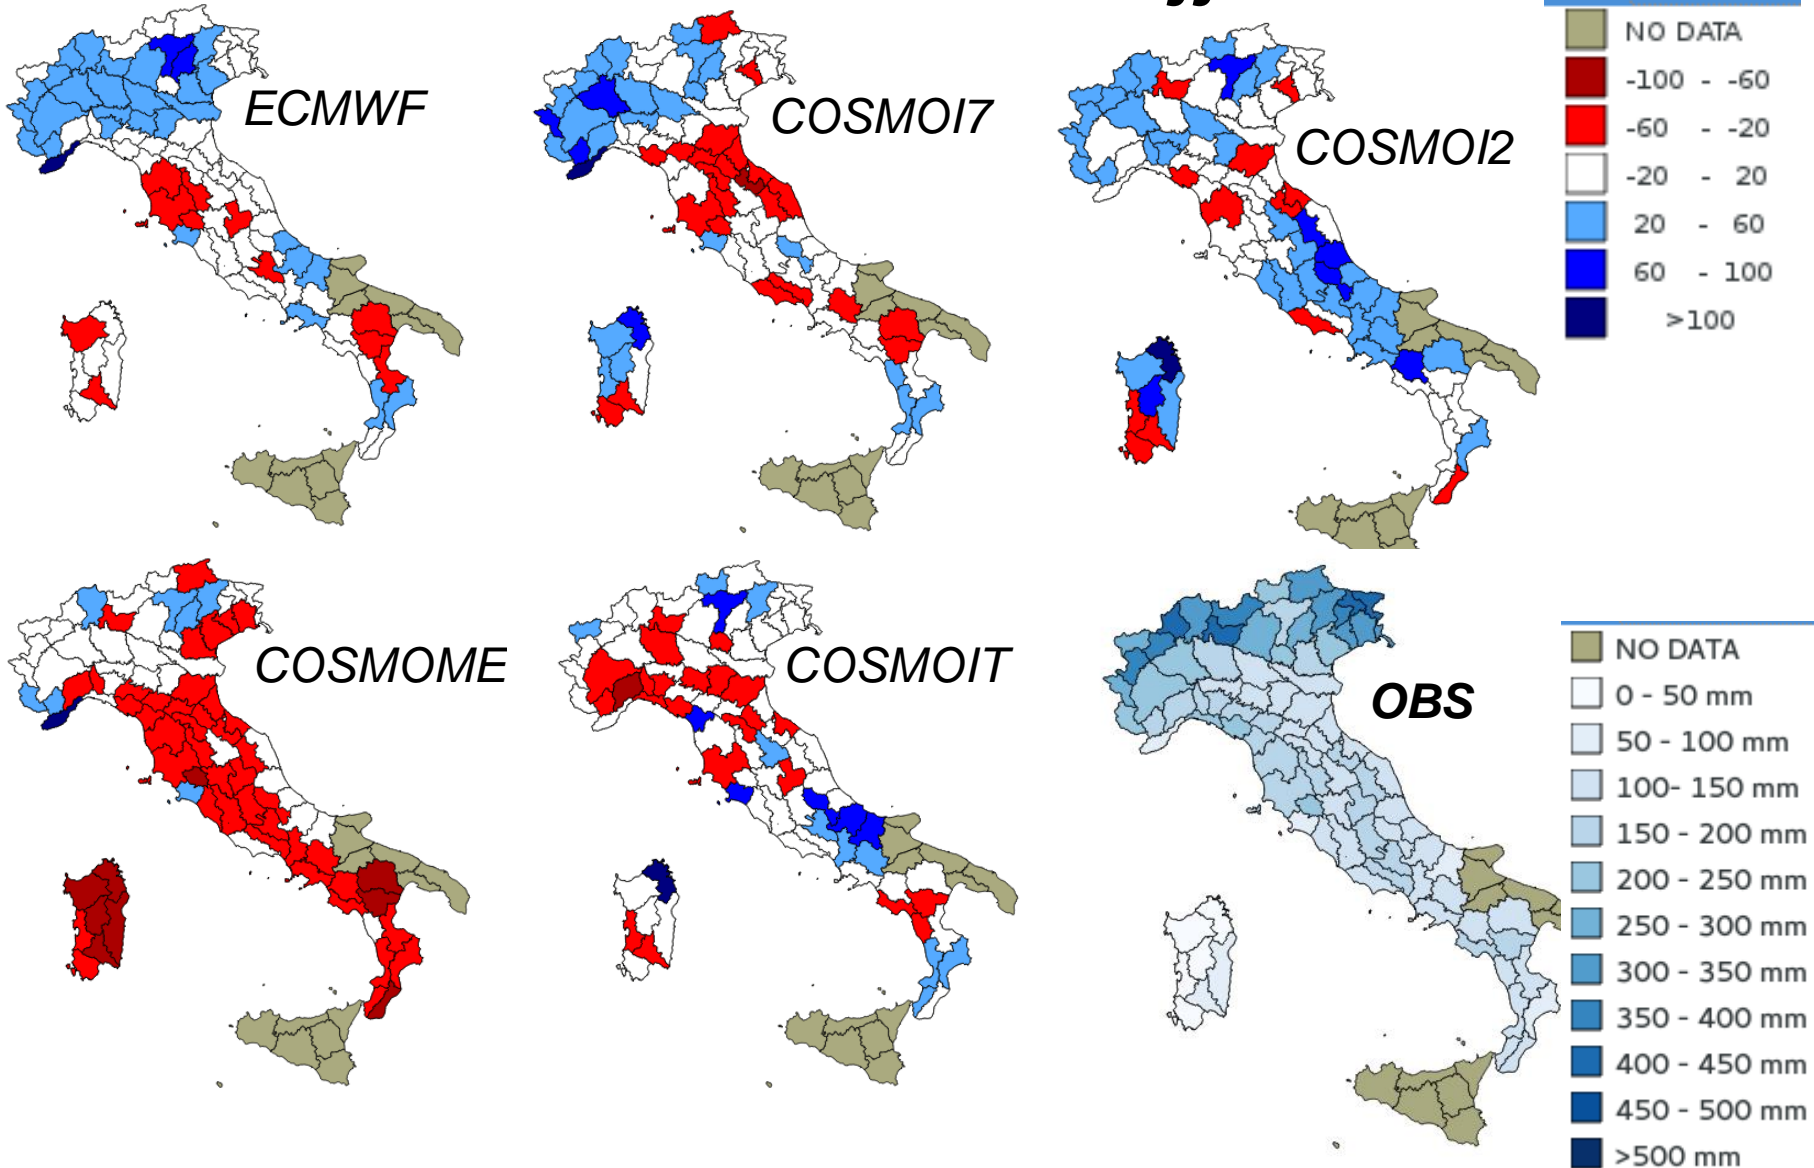

201603_201605: Precipitation in 24h - 50.0 mm threshold (ave)

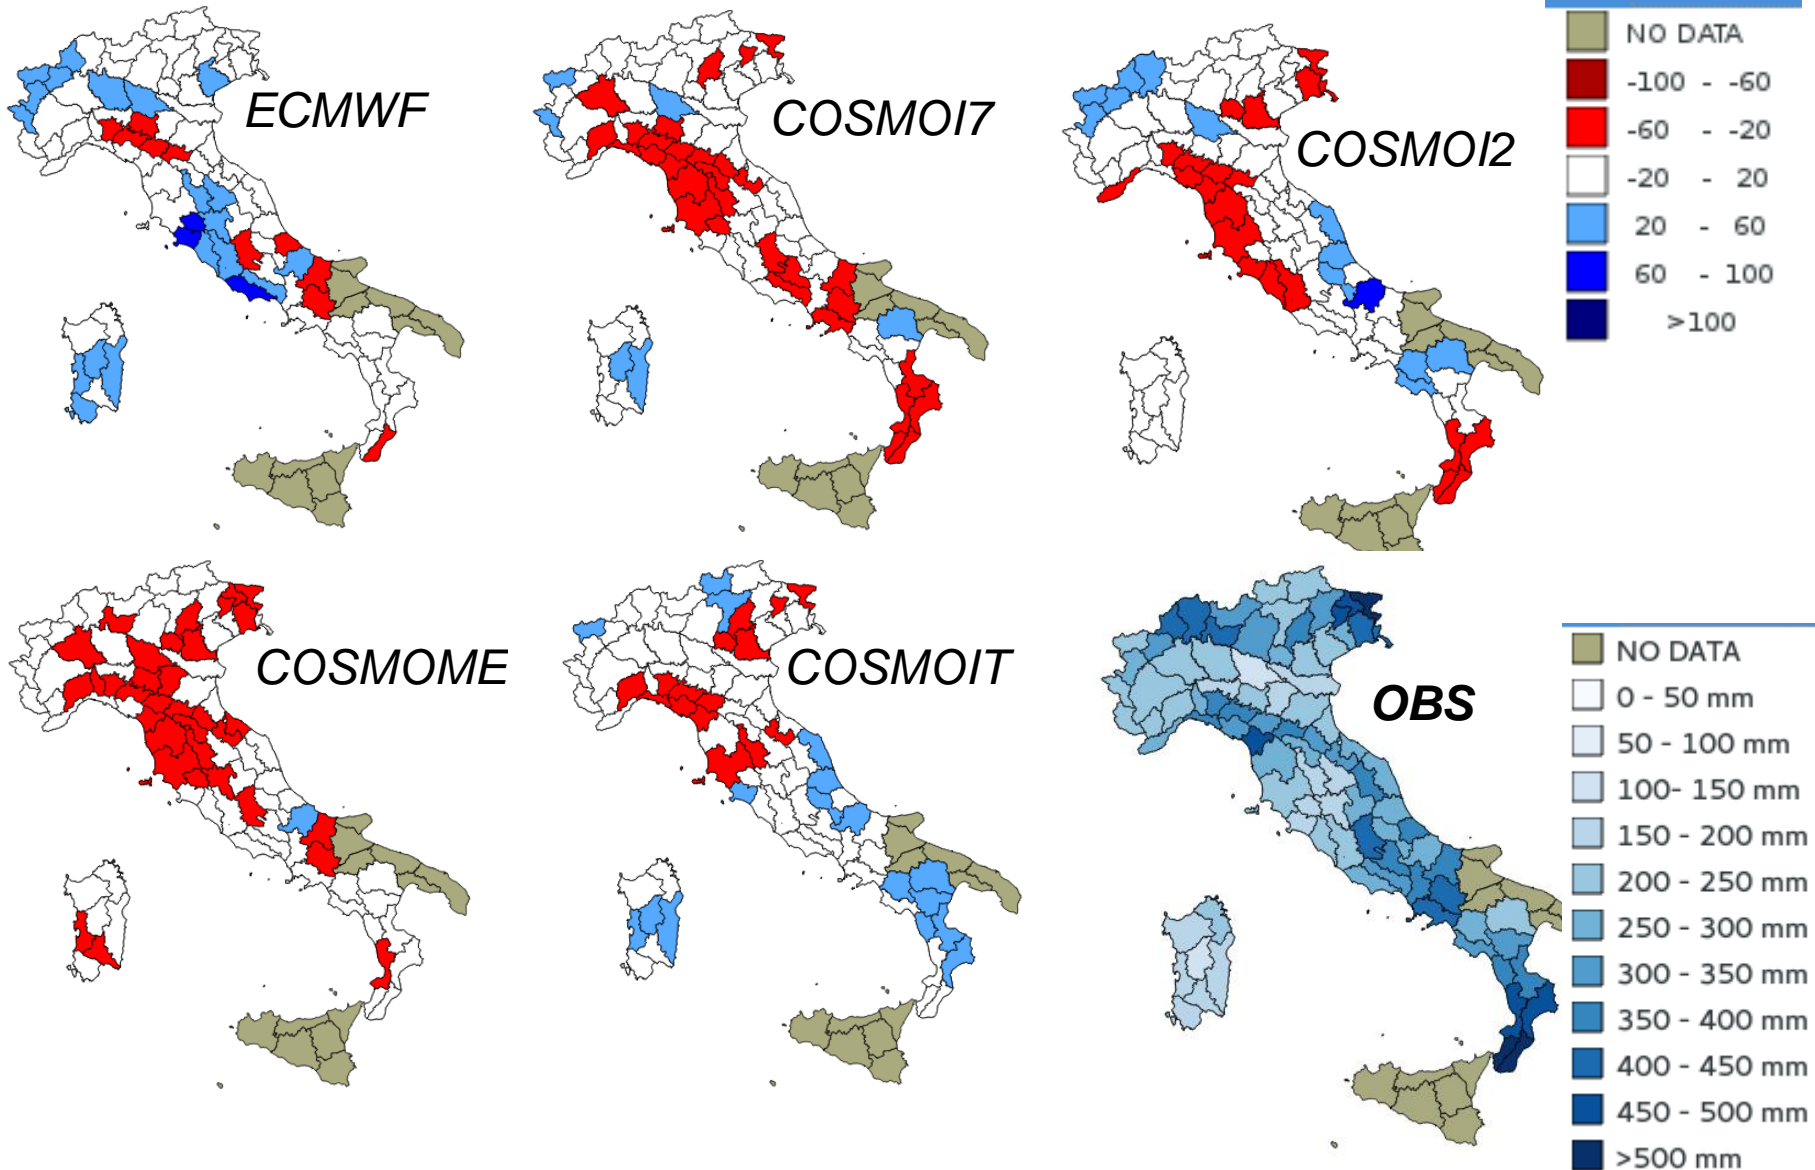

Jja15 -> low skill
ME -> good behaviour

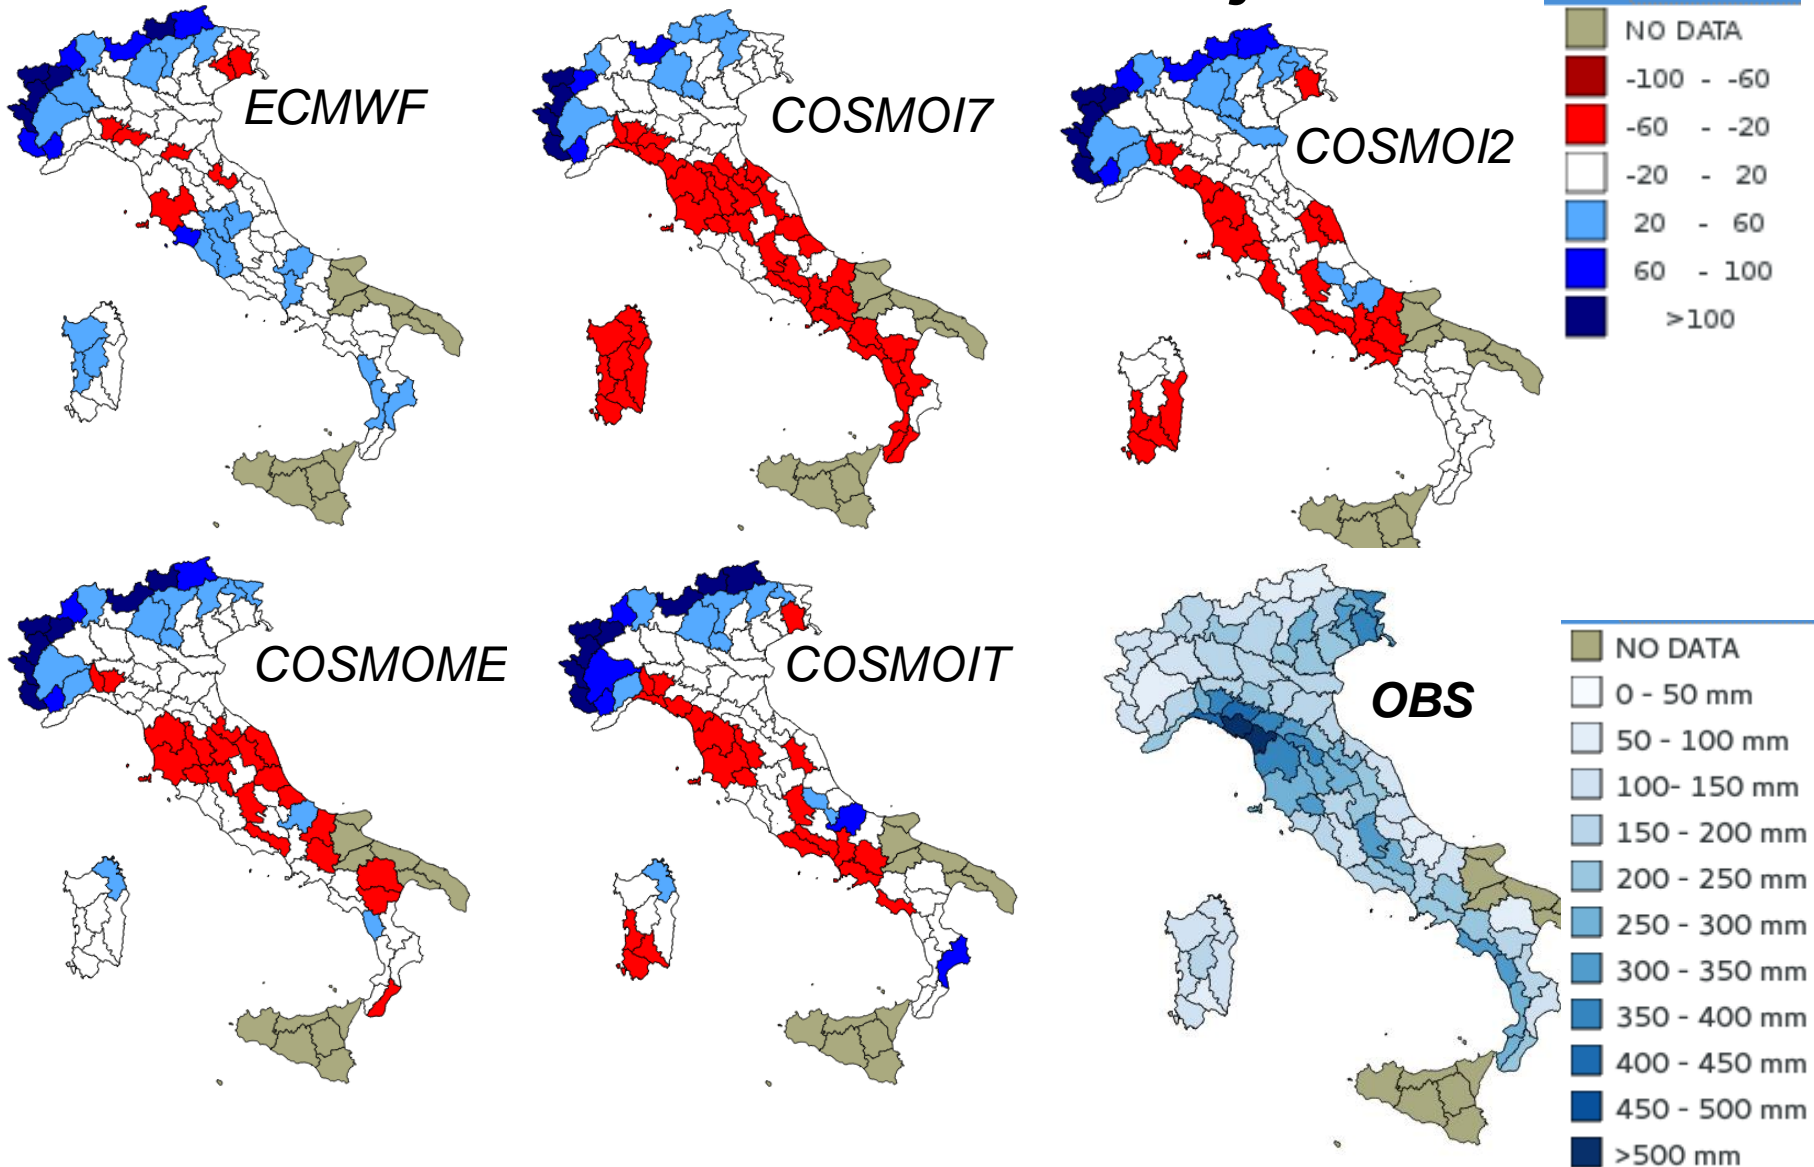

Relative error – jja15

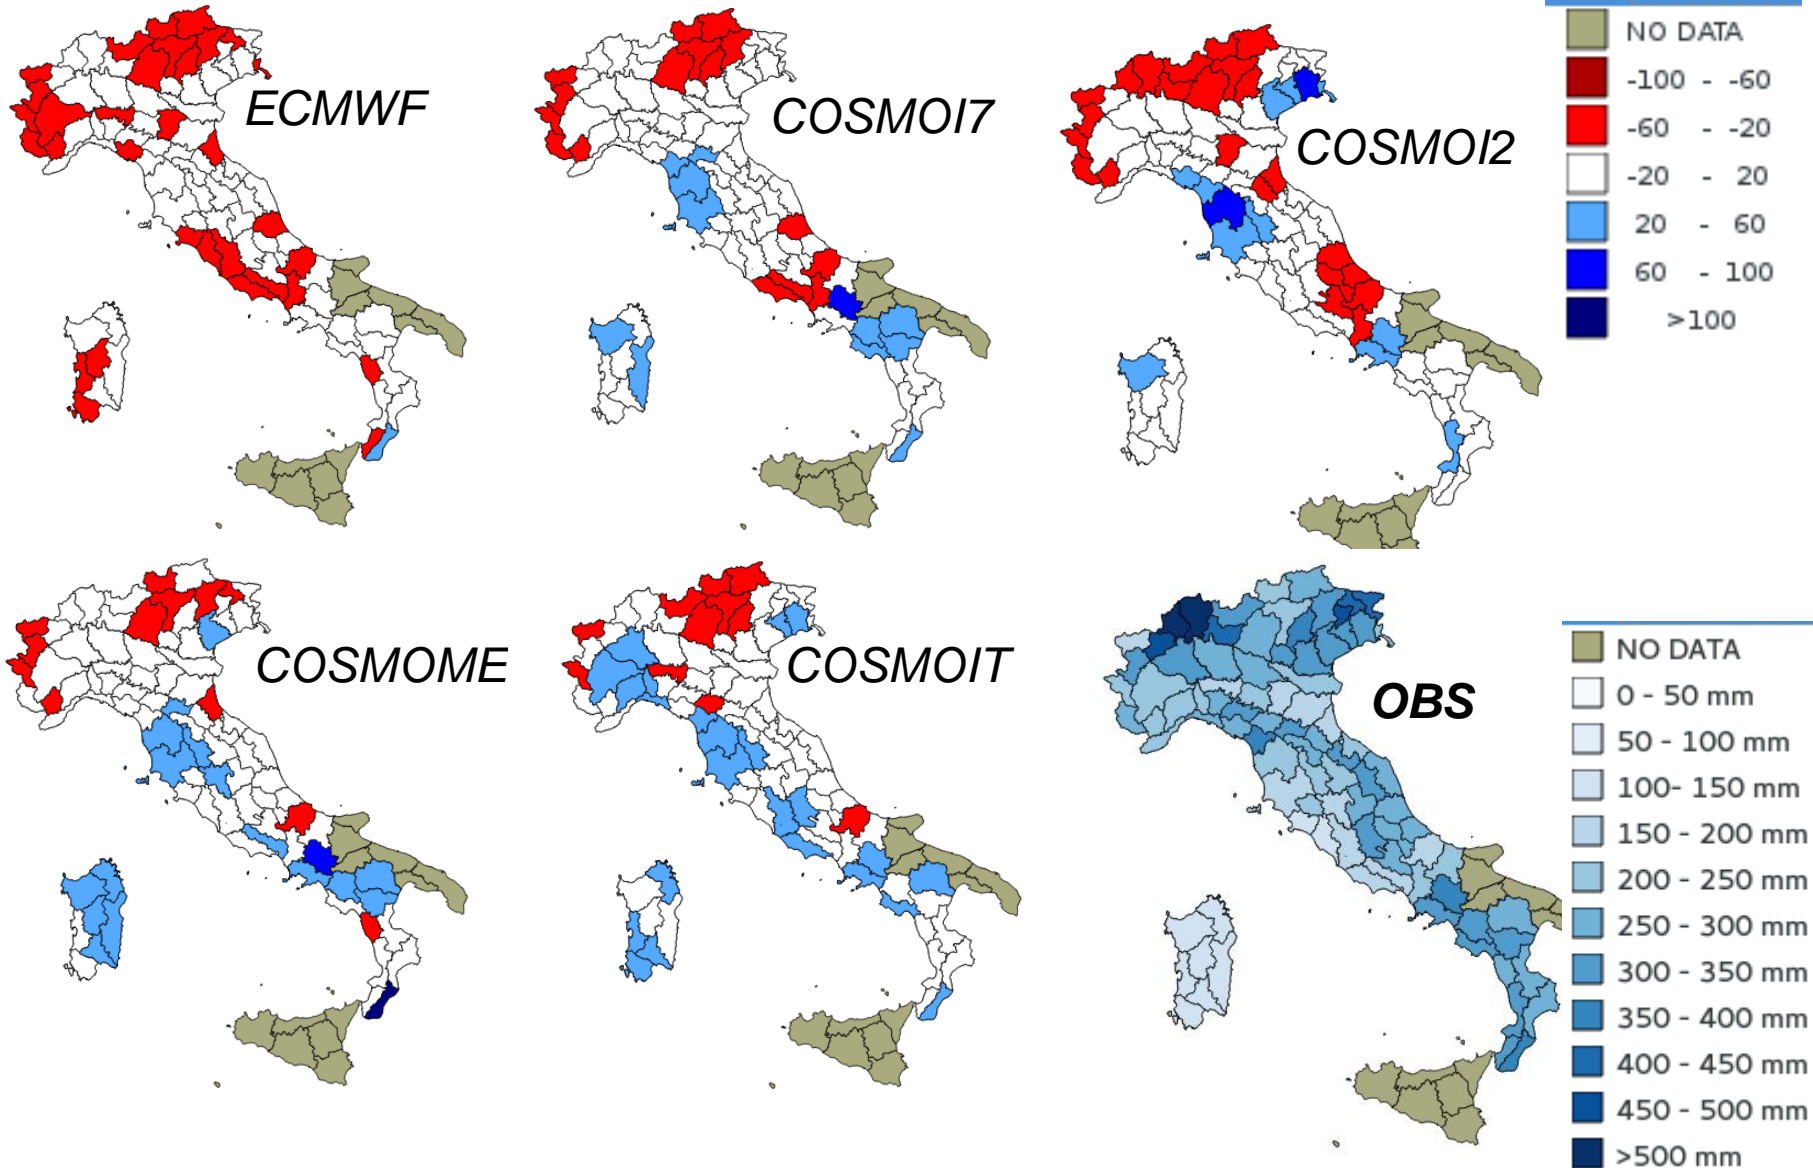

Relative error – son15

Relative error – djf16

Relative error – mam16

BIAS – ITALIAN MODELS

ME, IT very related

*17 underestimates
12 overestimates*

EDS (Extreme Dependency Score)– ITALIAN MODELS

*Better performance for
COSMO ME*

*Worst performance for
ECMWF*

(High thresholds)

*Similar behavior for
ECMWF, COSMO I7 and
COSMO I2*

(High thresholds)

THANK YOU FOR YOUR ATTENTION!
