DEW POINT TEMPERATURES

5 SOIL TYPES

SON/DJF/MAM

10 Soil Types in COSMO

Soil Types (used in COSMO model)	
Soil Type 1	Ice
Soil Type 2	Rock
Soil Type 3	Sand
Soil Type 4	Sandy Loam
Soil Type 5	Loam
Soil Type 6	Clay loam
Soil Type 7	Clay
Soil Type 8	Peat
Soil Type 9	Sea water
Soil Type 10	Sea Ice

Methodology

- After a preliminary analysis, it was found that only soil types 4, 5, 6, 7, 8 are represented from the 97 Common Area Stations.
- For the purpose of this experiment, one only station was chosen to represent each category.(station with same soil type for all participating models)
- For Soil Type 5 that is the most populated, a stratification based on the station height (<200m, >800m) is applied.

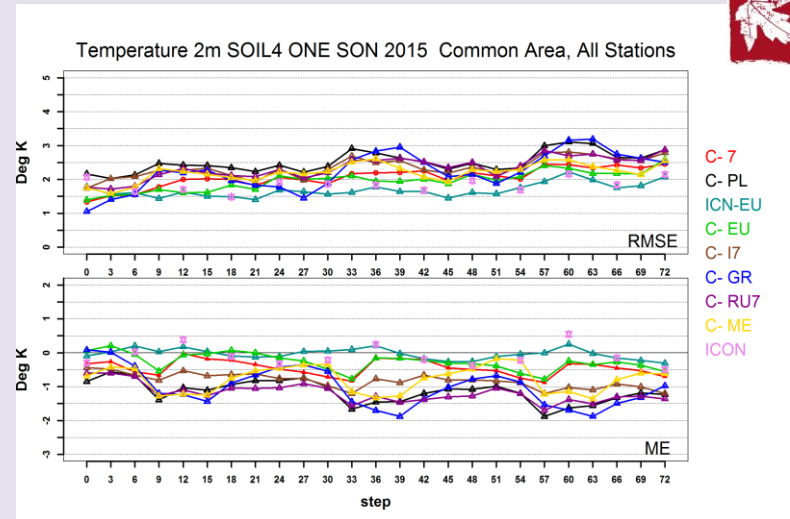

Soil characteristics for each type

soil type	1 ice	2 rock	3 sand	4 sandy loam	5 loam	6 loamy clay	7 clay	8 peat
volume of voids w_{PV} [1]	-	-	0.364	0.445	0.455	0.475	0.507	0.863
field capacity w_{FC} [1]	-	-	0.196	0.260	0.340	0.370	0.463	0.763
permanent wilting point w_{PWP} [1]	-	-	0.042	0.100	0.110	0.185	0.257	0.265
air dryness point w_{ADP} [1]	-	-	0.012	0.030	0.035	0.060	0.065	0.098
minimum infiltration rate I_{K2} [kg/(m ² s)]	-	-	0.0035	0.0023	0.0010	0.0006	0.0001	0.0002
hydraulic diffusivity parameter D_0 [10 ⁻⁹ m ² /s]	-	-	18400	3460	3570	1180	442	106
hydraulic diffusivity parameter D_1 [1]	-	-	-8.45	-9.47	-7.44	-7.76	-6.74	-5.97
hydraulic conductivity pa- rameter K_0 [10 ⁻⁹ m/s]	-	-	47900	9430	5310	764	17	58
hydraulic conductivity pa- rameter K_1 [1]	-	-	-19.27	-20.86	-19.66	-18.52	-16.32	-16.48
heat capacity $\rho_0 c_0$ [10 ⁶ J/(m ³ K)]	1.92	2.10	1.28	1.35	1.42	1.50	1.63	0.58
heat conductivity λ_0 [W/(K m)]	2.26	2.41	0.30	0.28	0.25	0.21	0.18	0.06
$\Delta\lambda$ [W/(K m)]	0.0	0.0	2.40	2.40	1.58	1.55	1.50	0.50
exponent B [1]	1.0	1.0	3.5	4.8	6.1	8.6	10.0	9.0

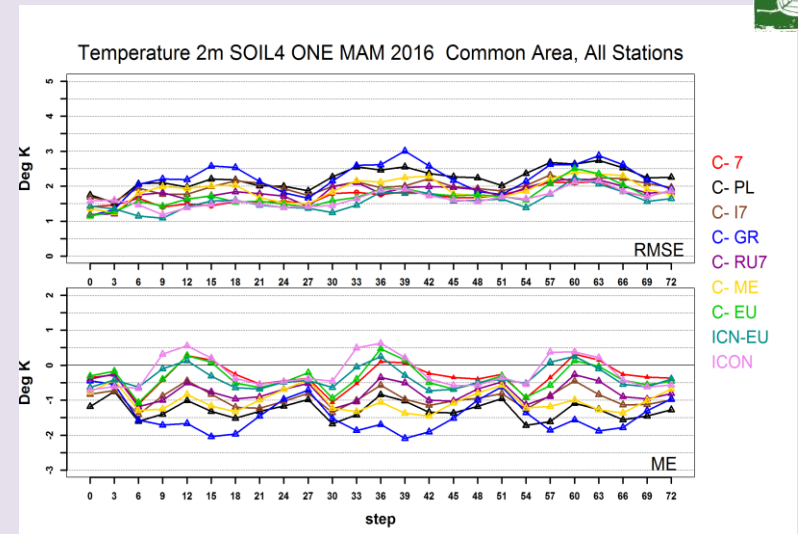

Each soil Type has different characteristics, eg. Sandy soils have increased hydraulic diffusivity and infiltration rate

- Bias mostly negative with slight diurnal variation.
- Sharper diurnal cycle in MAM
- Slight bias positive tendency for ICON and ICON-EU

Temperatures for SOIL 4 (Sandy Loam)

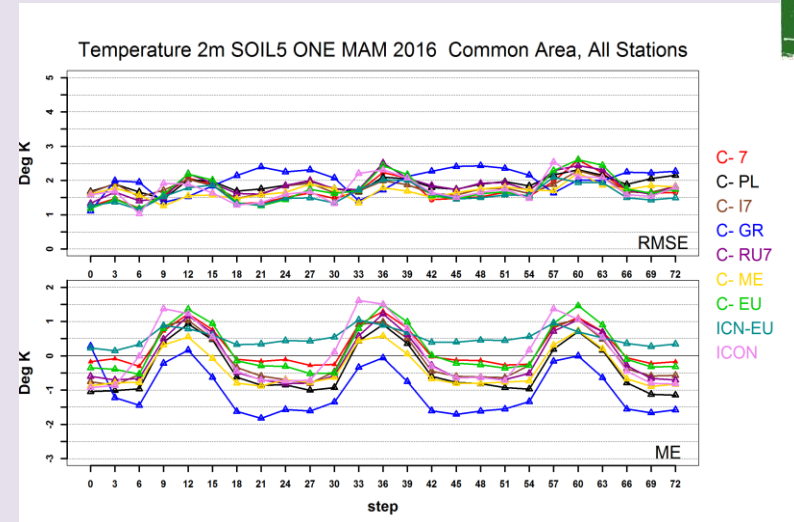

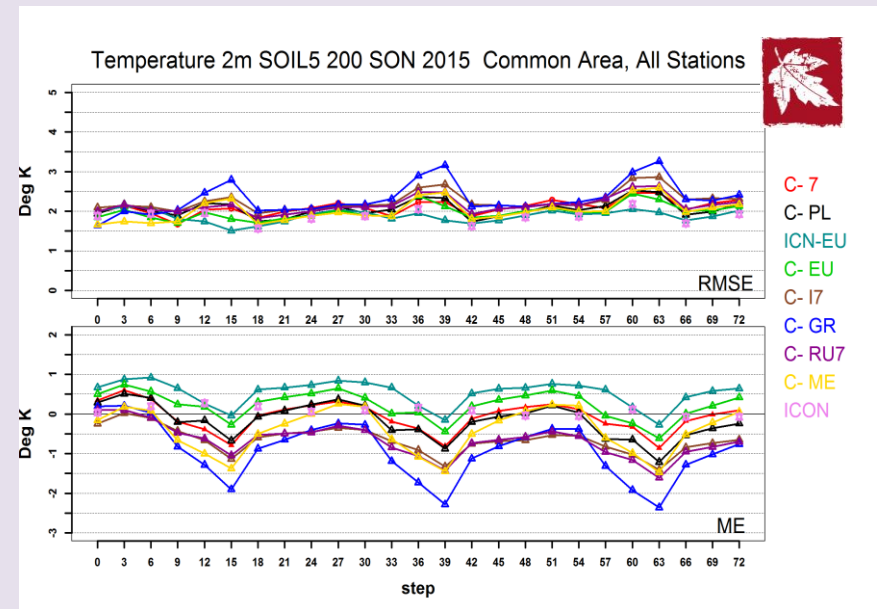

- Overestimation in DJF (all models)
- Higher Positive bias for ICON, ICON-EU
- Sharper diurnal cycle in MAM with positive peaks in the day.

Temperatures for SOIL 5 (Loam)

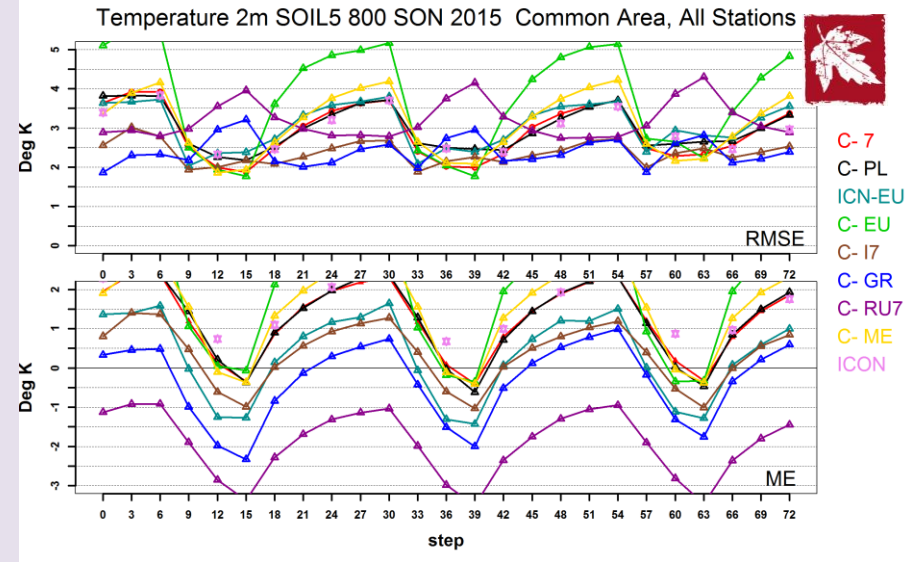

- Smooth bias diurnal cycle with negative trend in the day (SON and DJF)
- But slightly positive trend in the day for MAM.
- Slight overestimation for ICON-EU, ICON, C-EU, and underestimation for C-GR

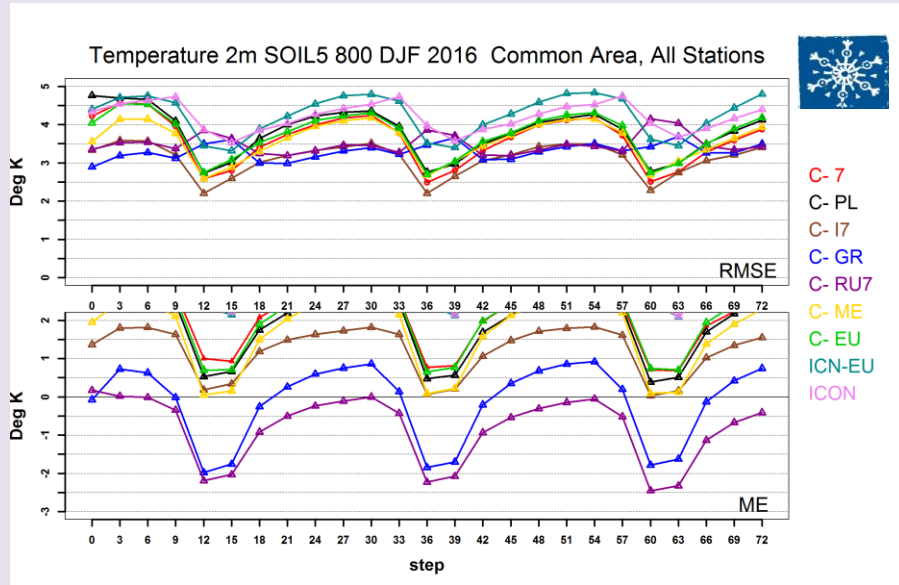

Temperatures for SOIL 5 (Loam) <200m

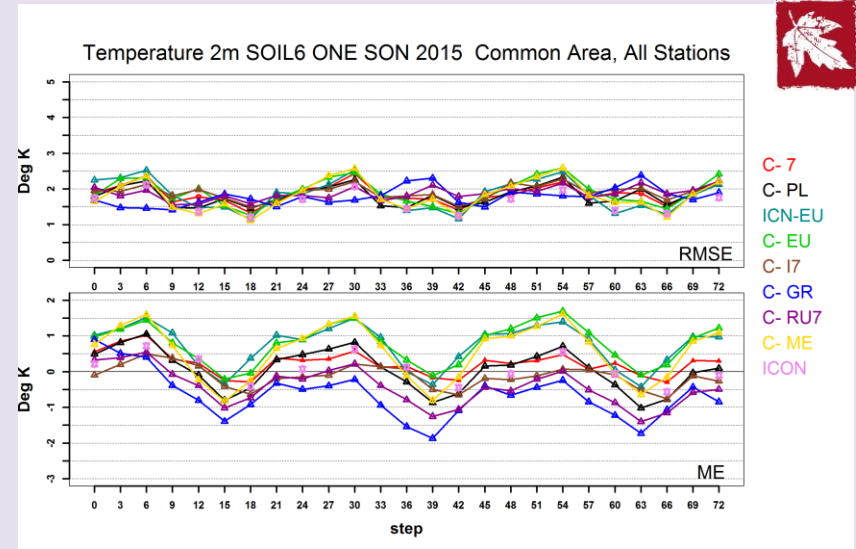

- Sharp diurnal ME cycle with negative trend in the day (all seasons)
- shift to negative values for MAM
- More positive values for ICON-EU, ICON, more negative for C-GR, C-RU7
- RMSE MAM peaks in the day- DJF night, SON variable

Temperatures for SOIL 5 (Loam) > 800m

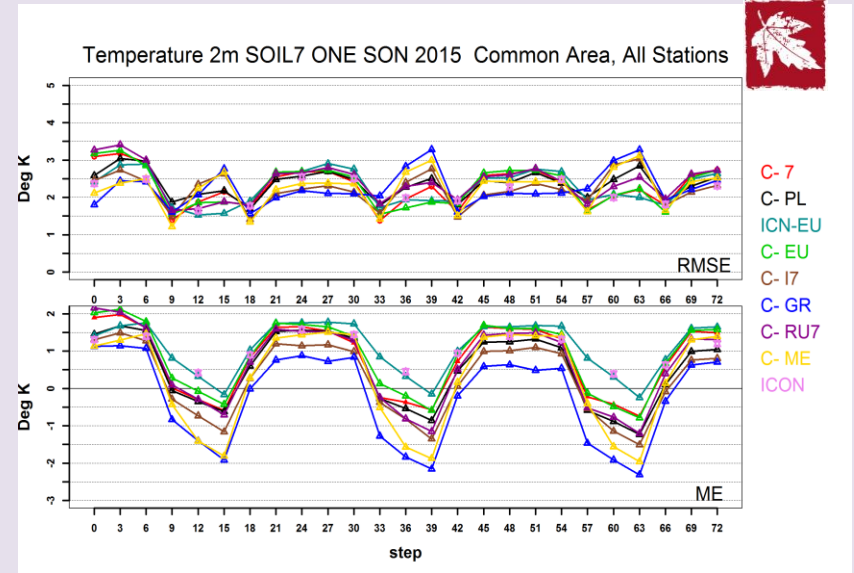

- Similar diurnal bias cycle with negative trend in the day (all seasons)
- More positive values for ICON-EU, C-EU, C-I7 and more negative for C-GR

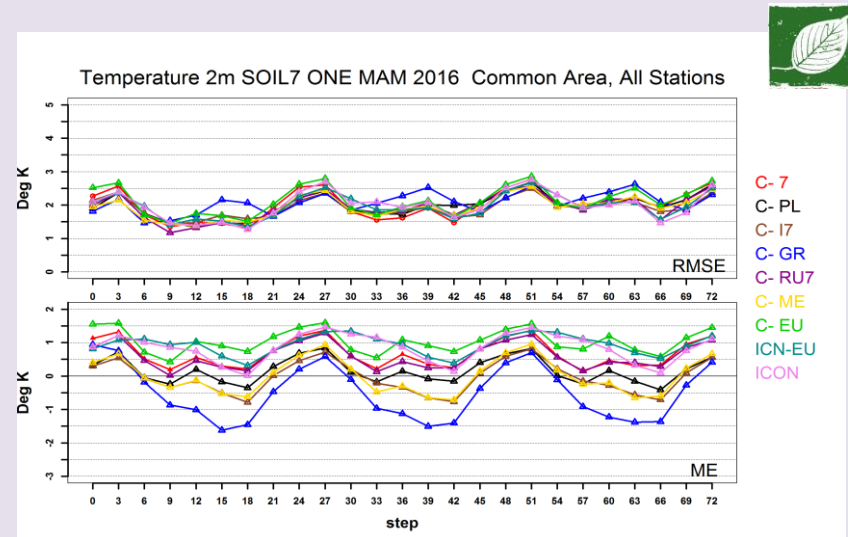

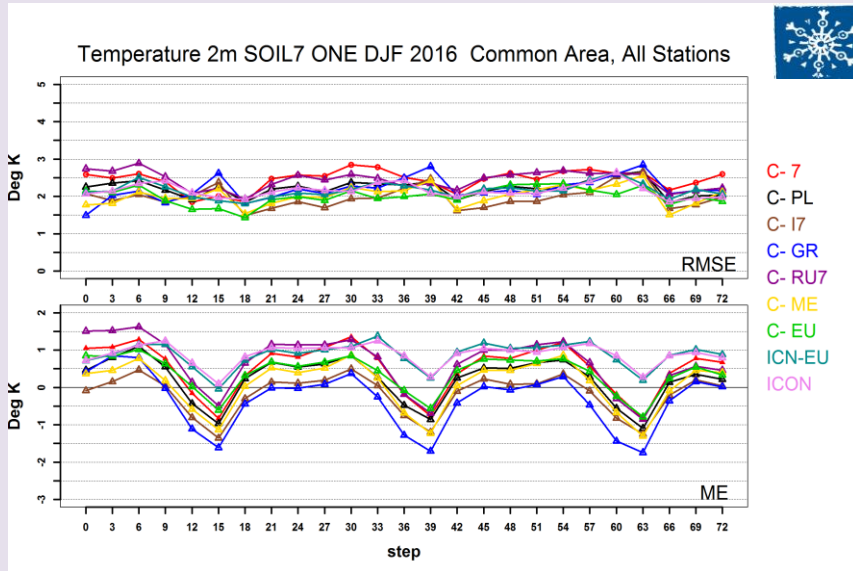

Temperatures for SOIL 6 (Clay Loam)

- Similar diurnal ME cycle with negative trend in the day (all seasons)
- sharper diurnal cycle for SON with RMSE peaks, smoother in MAM.

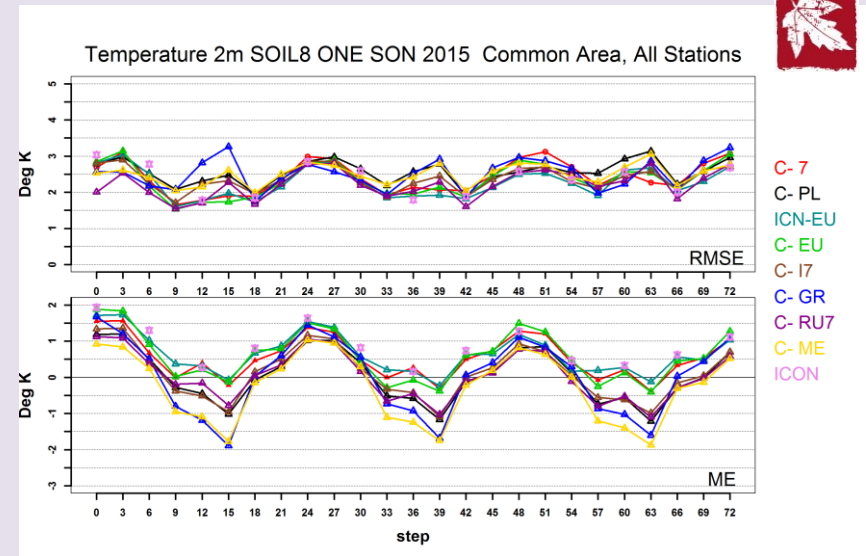

Temperatures for SOIL 7 (Clay)

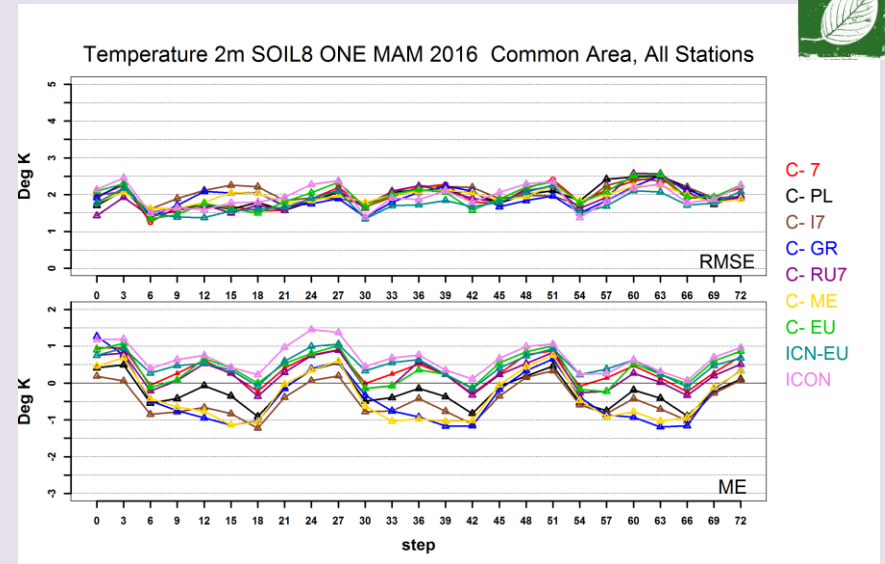

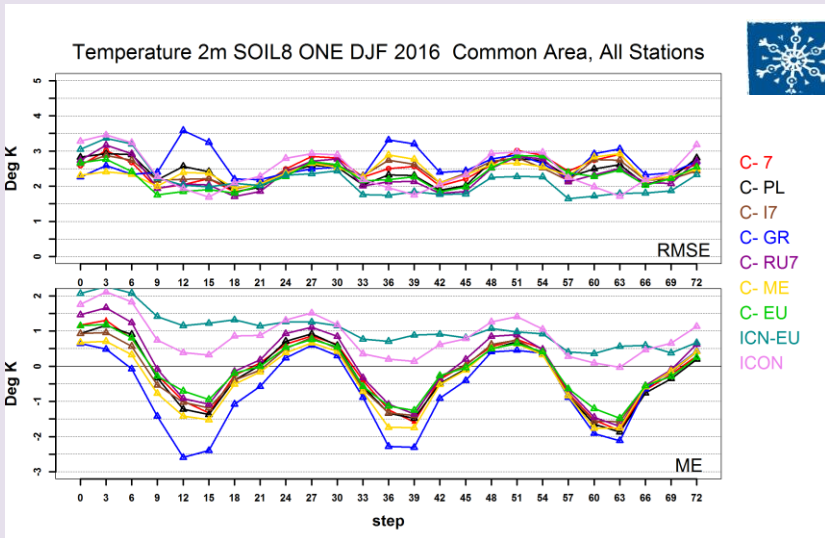

- Similar diurnal ME cycle with negative trend in the day (SON and DJF)
- ICON and ICON-EU almost no diurnal cycle in DJF, with ME >0
- MAM smooth cycle with slight positive peaks in the day.

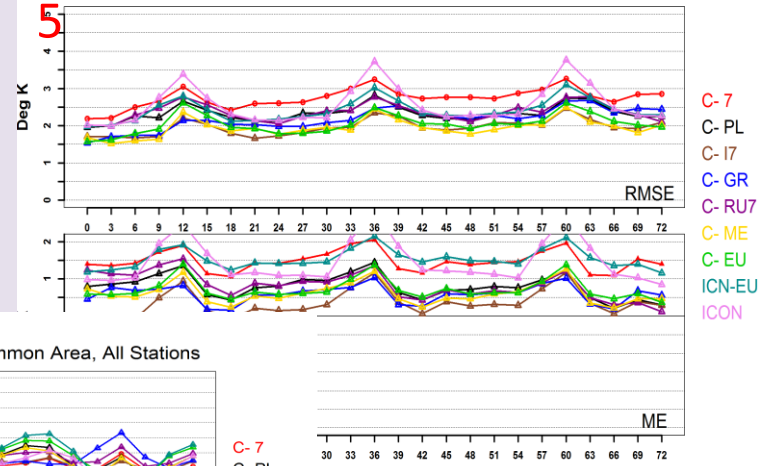

Temperatures for SOIL 8 (Peat)

Temperature 2m SOIL4 ONE DJF 2016 Common Area, All Stations

Temperature 2m SOIL5 ONE DJF 2016 Common Area, All Stations

Temperature 2m SOIL6 ONE DJF 2016 Common Area, All Stations

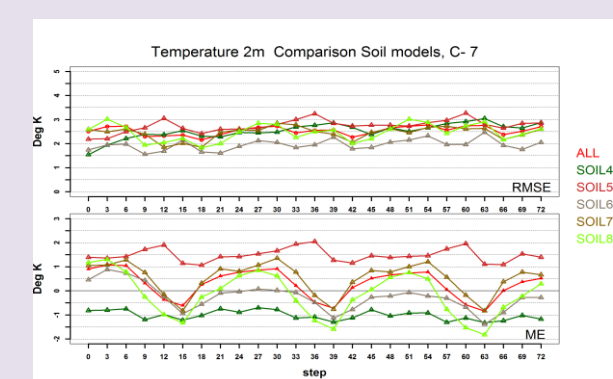

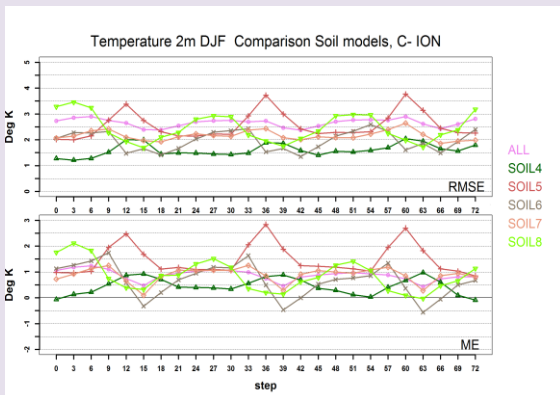

Temperature 2m SOIL7 ONE DJF 2016 Common Area, All Stations

Temperature 2m SOIL8 ONE DJF 2016 Common Area, All Stations

Conditional Verification

- Td bias slight diurnal cycle SON, DJF
- Sharper diurnal cycle in MAM with RMSE max and extreme ME for C-GR, C-7.
- ME >0 ICON ME <0 C-I7 in DJF

Dew Point Temperature 2m SOIL4 ONE SON 2015 Common Area, All Stations

Dew Point Temperatures for SOIL 4 (Sandy Loam)

Dew Point Temperature 2m SOIL4 ONE DJF 2016 Common Area, All Stations

Dew Point Temperature 2m SOIL4 ONE MAM 2016 Common Area, All Stations

- Bias and RMSE diurnal cycle for SON and MAM
- Constant Overestimation in DJF.

Dew Point Temperature 2m SOIL5 ONE SON 2015 Common Area, All Stations

Dew Point Temperatures for SOIL 5 (Loam)

Dew Point Temperature 2m SOIL5 ONE DJF 2016 Common Area, All Stations

Dew Point Temperature 2m SOIL5 ONE MAM 2016 Common Area, All Stations

- ME similar smooth diurnal cycles for SON and MAM with negative ME trend in the day.
- Positive daytime ME trend for DJF.
- Sharper diurnal RMSE cycle in MAM

Dew Point Temperature 2m SOIL5 200 SON 2015 Common Area, All Stations

Dew Point Temperatures for SOIL 5 (Loam) < 200m

Dew Point Temperature 2m SOIL5 200 DJF 2016 Common Area, All Stations

Dew Point Temperature 2m SOIL5 200 MAM 2016 Common Area, All Stations

- similar sharp diurnal cycles with negative bias and positive trends in the day.
- Slightly more positive ME for DJF with ICON and ICON-EU ME >0 in the day.

Dew Point Temperatures for SOIL 5 (Loam) > 800m

- ME similar diurnal cycles for SON and DJF with positive peaks in the day. ICON-EU ME >0 C-7 ME <0.
- RMSE increases with time in SOIL6 max C-7)

Dew Point Temperature 2m SOIL6 ONE SON 2015 Common Area, All Stations

Dew Point Temperatures for SOIL 6 (Clay Loam)

Dew Point Temperature 2m SOIL6 ONE DJF 2016 Common Area, All Stations

Dew Point Temperature 2m SOIL6 ONE MAM 2016 Common Area, All Stations

■ ME similar diurnal cycles for SON and MAM with positive peaks in the day. Smoother cycle for DJF.

Dew Point Temperature 2m SOIL7 ONE SON 2015 Common Area, All Stations

Dew Point Temperatures for SOIL 7 (Clay)

Dew Point Temperature 2m SOIL7 ONE DJF 2016 Common Area, All Stations

Dew Point Temperature 2m SOIL7 ONE MAM 2016 Common Area, All Stations

- Bias >0 in MAM positive peaks around 18 UTC.

Dew Point Temperature 2m SOIL8 ONE SON 2015 Common Area, All Stations

Dew Point Temperatures for SOIL 8 (Peat)

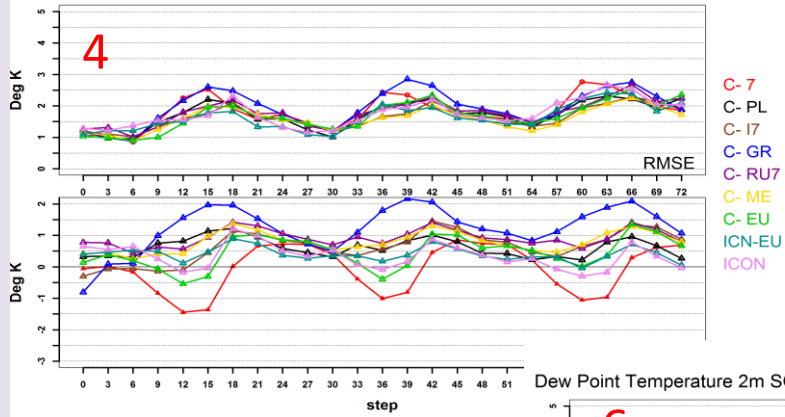

Dew Point Temperature 2m SOIL8 ONE DJF 2016 Common Area, All Stations

Dew Point Temperature 2m SOIL8 ONE MAM 2016 Common Area, All Stations

Dew Point Temperature 2m SOIL4 ONE MAM 2016 Common Area, All Stations

Dew Point Temperature 2m SOIL5 ONE MAM 2016 Common Area, All Stations

Dew Point Temperature 2m SOIL6 ONE MAM 2016 Common Area, All Stations

Td

Dew Point Temperature 2m SOIL7 ONE MAM 2016 Common Area, All Stations

Dew Point Temperature 2m SOIL8 ONE MAM 2016 Common Area, All Stations

Td Conditional Verification

Conclusions

Temperatures

- For Sandy loam soil (Soil Type 4) there is a tendency of T negative bias with almost no diurnal cycle.
- For loam (Soil Type 5), in DJF season, there is a tendency of T overestimation, with bias positive peaks in the daytime, (while other soil types underestimate in the day).
- For Soil Type 5 and stations >800m bias diurnal cycle is very sharp with more negative values in MAM.
- For all soil Types (but less for Soil 6), ICON and ICON-EU T bias is more positive than COSMO models.

Dew Point Temperatures

- For loam (Soil Type 5), in DJF season, ME is positive and constant, (while other soil types exhibit a diurnal cycle).
- Sharp ME negative peaks in MAM in the daytime (especially for ICON driven models)
- For Soil Type 5 and stations >800m sharp bias cycles with negative bias and positive tendency in the day,
