Raman Lidar (RALMO)

- Vertical profiles of Temperature and WV Mixing Ratio at 30 min temporal resolution
- Coverage of about 60% below 2000m (see below)

🔥 H₂O

Lidar Windows

N₂

Laser Beam

A new observation operator in MEC-light

- Convert QV to mixing ratio and interpolate to observation levels
- Observations are 30 min averages and available every 30 min. In the obs operator, the temporal averaging over the last 30 min and the interpolation between model values at t=0 and t=60min is approximated by finite differences in time as follows:

RALMO against radiosondes

Temperature

Experiment setup C

Time period: 20-30.07.2019

	Assimilation Experiment	Forecast
RALMO + operational obs	326	426
Operational obs	325	325

Model: COSMO-1E + KENDA-1

÷

- observation error: 1 K for T ; 1 g/kg for MIXR
- Every 30 minutes RALMO is assimilated
- ÷ ÷ 순 ት ት ት ት **公** 子 \$ RALMO is almost bias free (w.r.t. radiosonde) → no bias correction needed 5 52 53

Synoptic setting - 20-30 July 2019

O-A and O-B statistics (MIXR)

Verification of FG against surface data (TD2m)

Verification of FG against surface data (T2m)

Verification of FG against surface data (RAD)

Verification of FG against MWR (Brightn. Temp.)

- Payerne; zenith angle 0°
- Moisture sensitive channels show large improvement
- Similar for other angles (not shown)

Operational obs

Summary of First Guess verification

	Surface	Radiosonde / MWR (PAY only)
Temperature	neutral	better
RH / TD	better	better < 600hPa
Radiation	worse	-
Brightness Temperature	-	Moisture-sensitive channels better

C Summary

- Successful assimilation of Raman lidar mixing ratio and temperature profiles
- Dry bias in model is corrected
- Precipitation improves ←→ cloud cover and radiation got worse
- Potentially related to model tuning

	First Guess (FG)	Forecast (FCT)					
	Surface	Profile (PAY only)	Surface				
Temperature	neutral	better	neutral				
RH / TD	better	better < 600hPa	better				
Radiation / Cloud Cover	worse	-	worse				
Brightness Temperature	-	Moisture-sensitive channels better	-				
Precip	-	-	better				

New case studies •

÷

÷

53

c)-

- More convective cases (improve statistics)
- Other seasons
- Observation error 'tuning' •
 - Lower the prescribed observation error?
