

# Testing the New COSMO Radiation Scheme with CAMS Prognostic Aerosols

Harel Muskatel ([IMS](#)), Uli Blahak ([DWD](#)), Pavel Khain ([IMS](#))  
(Supported by Alessio Bozzo ECMWF)

Part of **T<sup>2</sup>(RC)<sup>2</sup> PP**

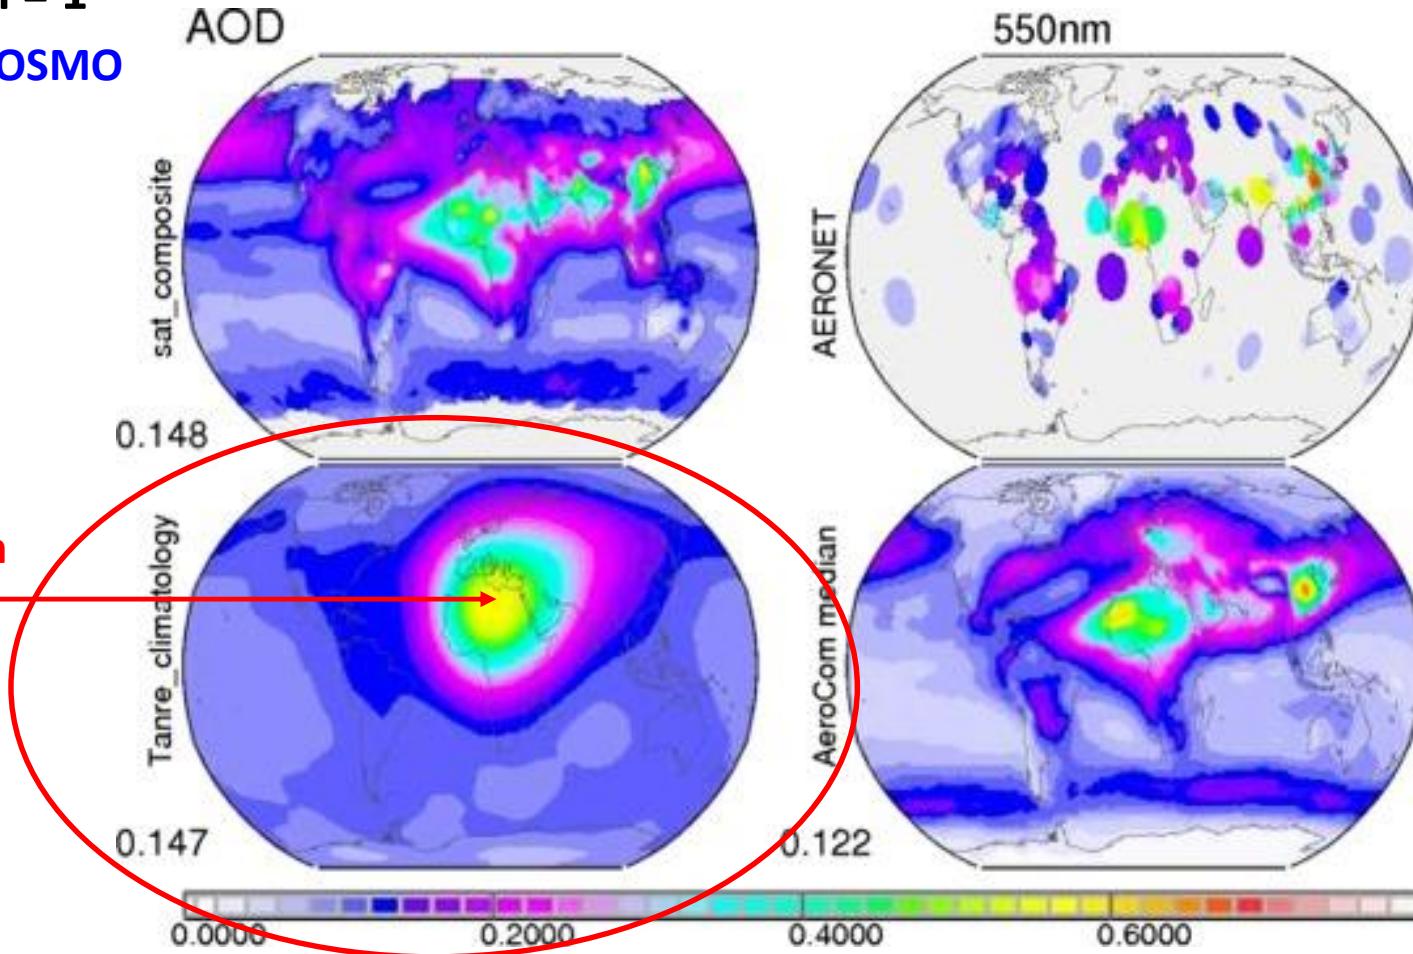

COSMO User Seminar- March 6, 2017

# Outline

- Aerosols models currently available in COSMO radiation scheme
- Explanation on the verification system
- Verifications in **clear** & **cloudy** skies in 29 test cases:
  - Aerosols optical depth - AOD
  - Global radiation - GR
  - Surface temperature – T2m
  - Rain
- Concluding remarks
- Outlook

# Tanre (1984) aerosols annual climatology

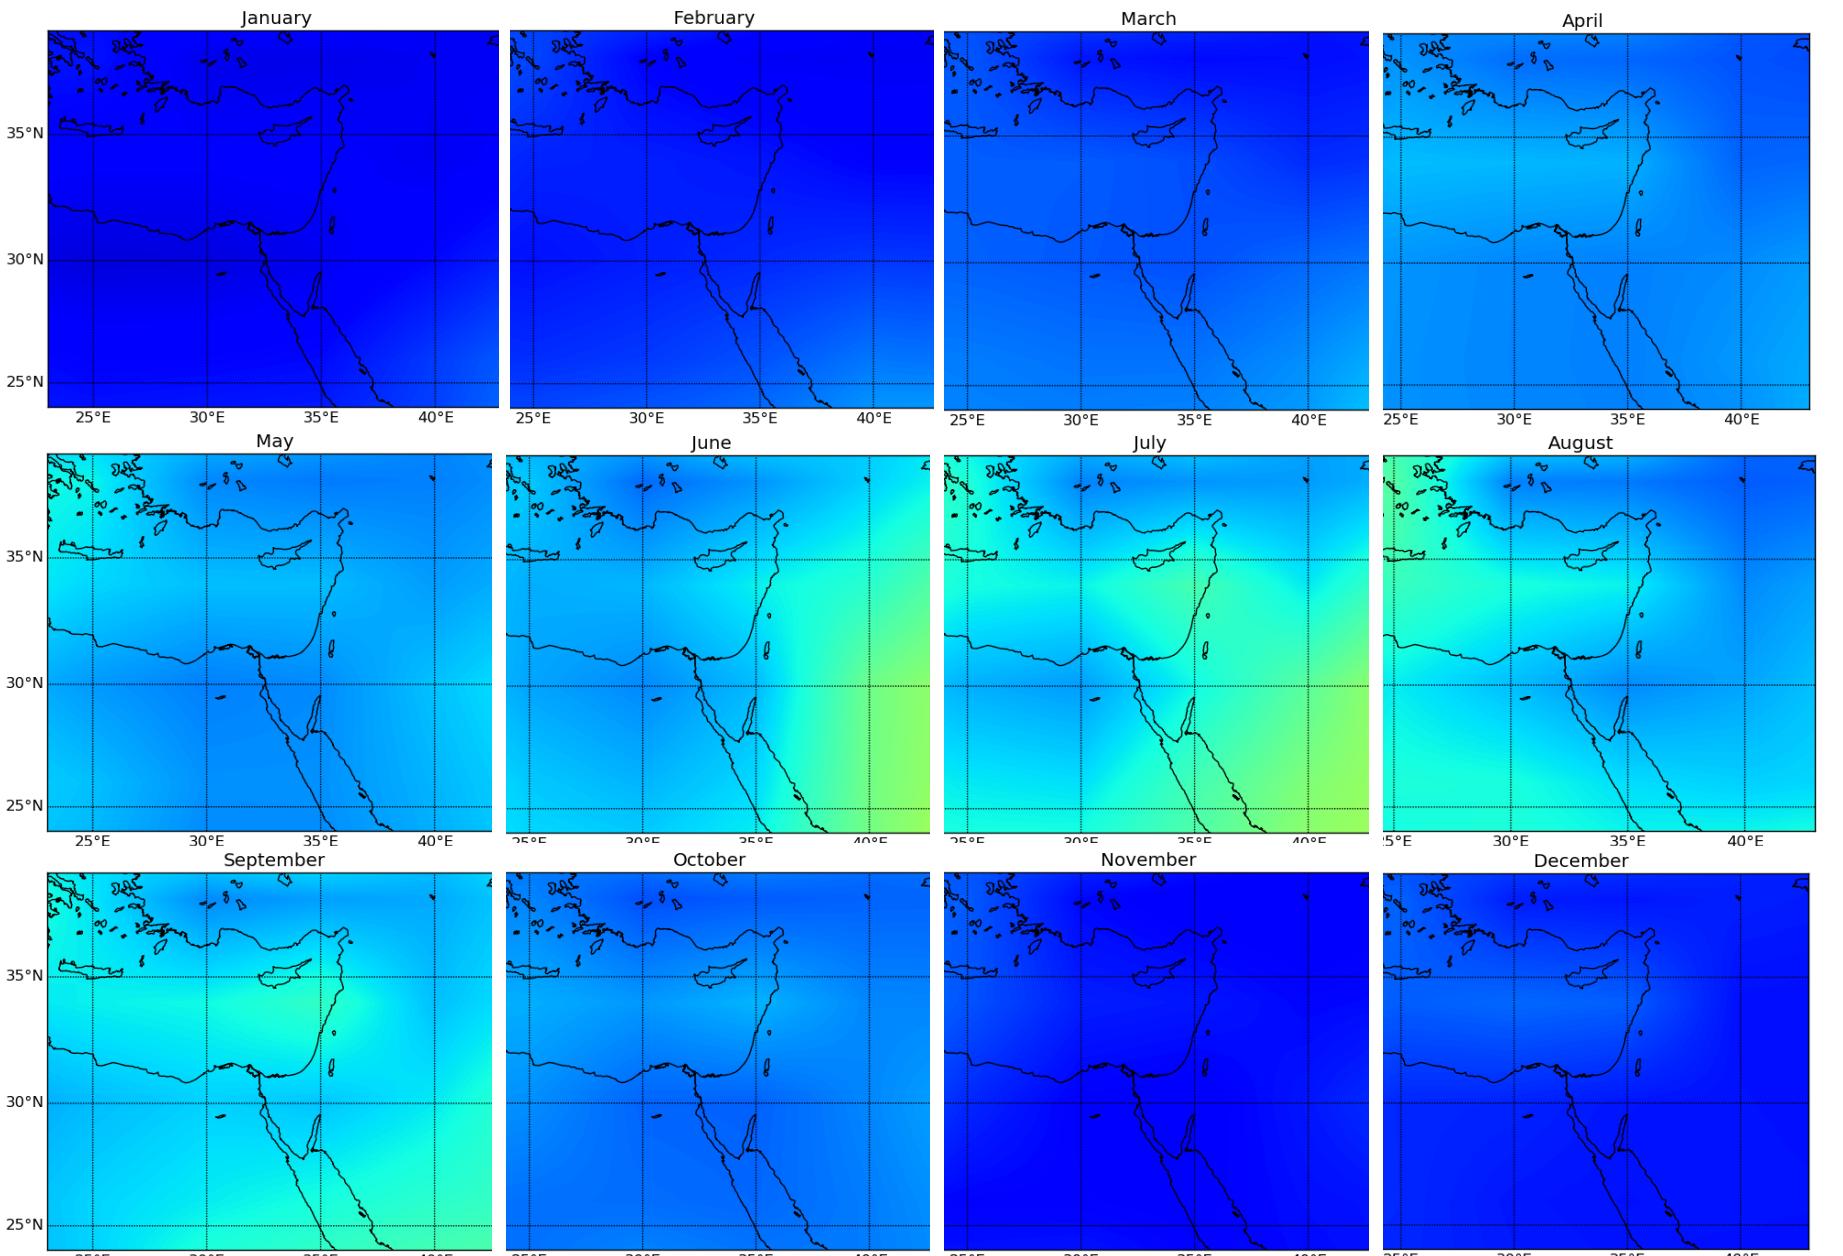

`itype_aerosol = 1`  
Operational in COSMO

# Tegen (1997) aerosols monthly climatology

**itype\_aerosol = 2**

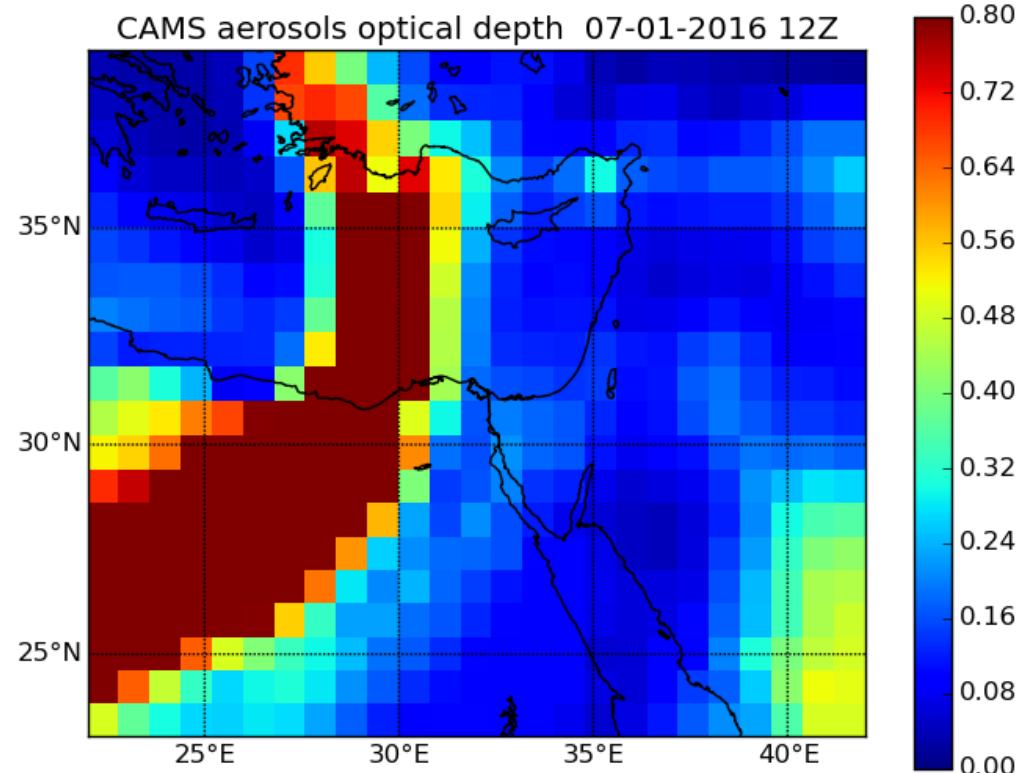

**Operational in IFS**

# CAMS prognostic aerosols

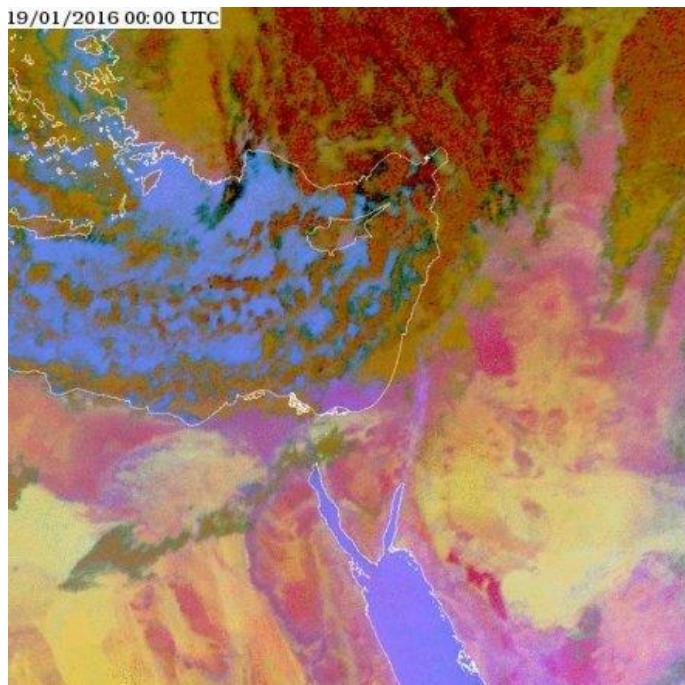

**itype\_aerosol = 4**

- Built on the ECMWF NWP system with additional prognostic aerosol variables
- Input aerosols analysis:
  - NASA/MODIS Terra and Aqua Aerosol Optical Depth at 550 nm
  - NASA/CALIOP CALIPSO Aerosol Backscatter
  - AATSR, PMAP, SEVIRI, VIIRS
- Verification based on AERONET  
 (text adapted from Benedetti CUS2016)

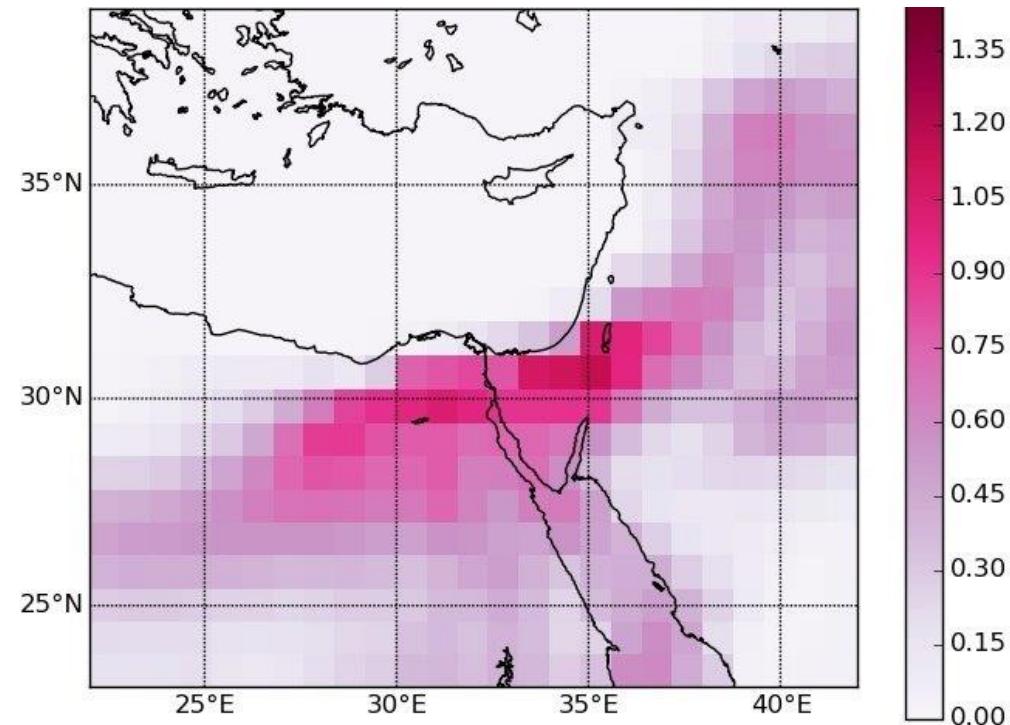

# 16-20/01/2016 Dust Storm Test Case

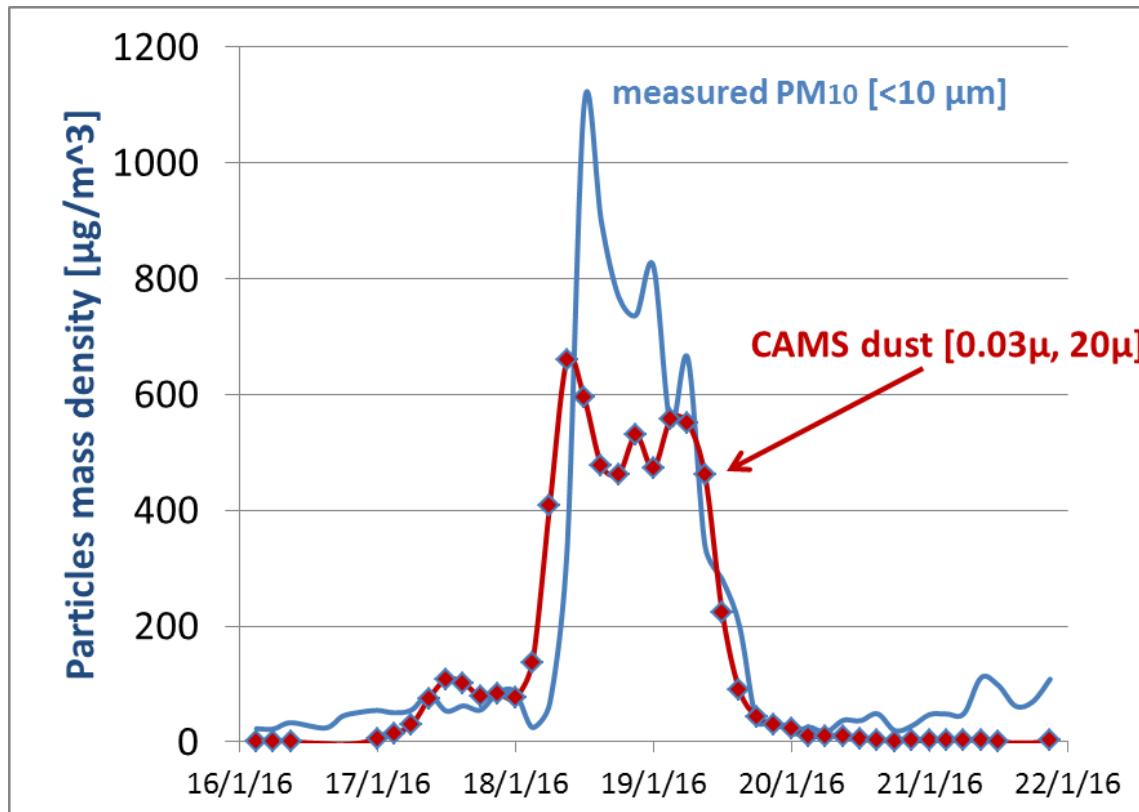

MSG – dust

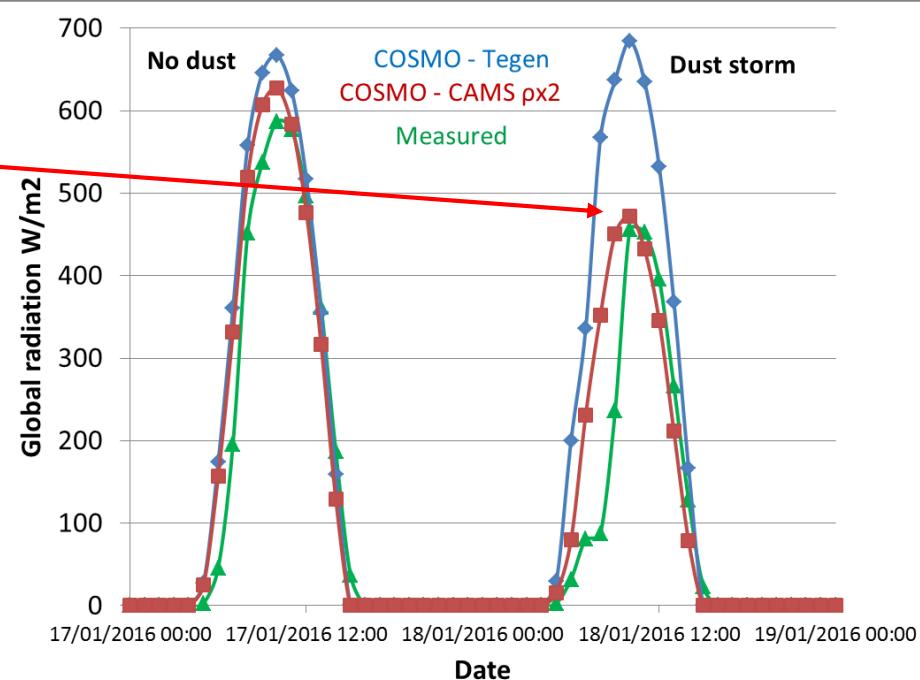

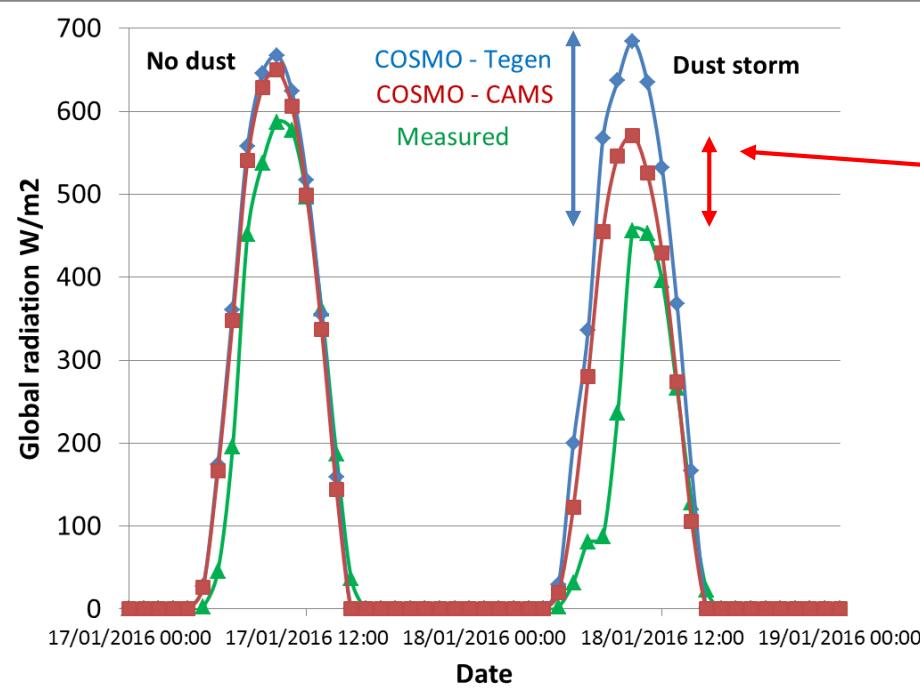

CAMS DOD at 550nm

## CAMS aerosols mass density forecast performance vs. measurements in Tel-Aviv

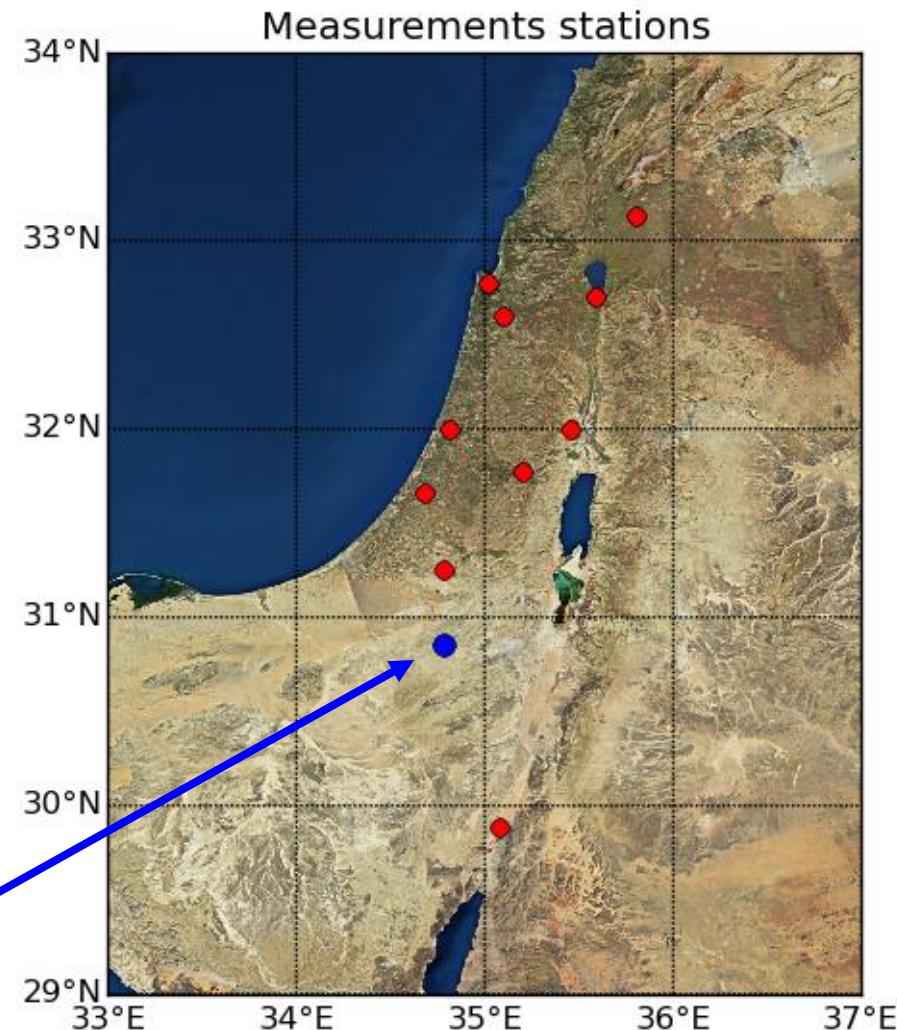

## COSMO radiation schemes verification vs. measurements in Bet-Dagan (near TA)

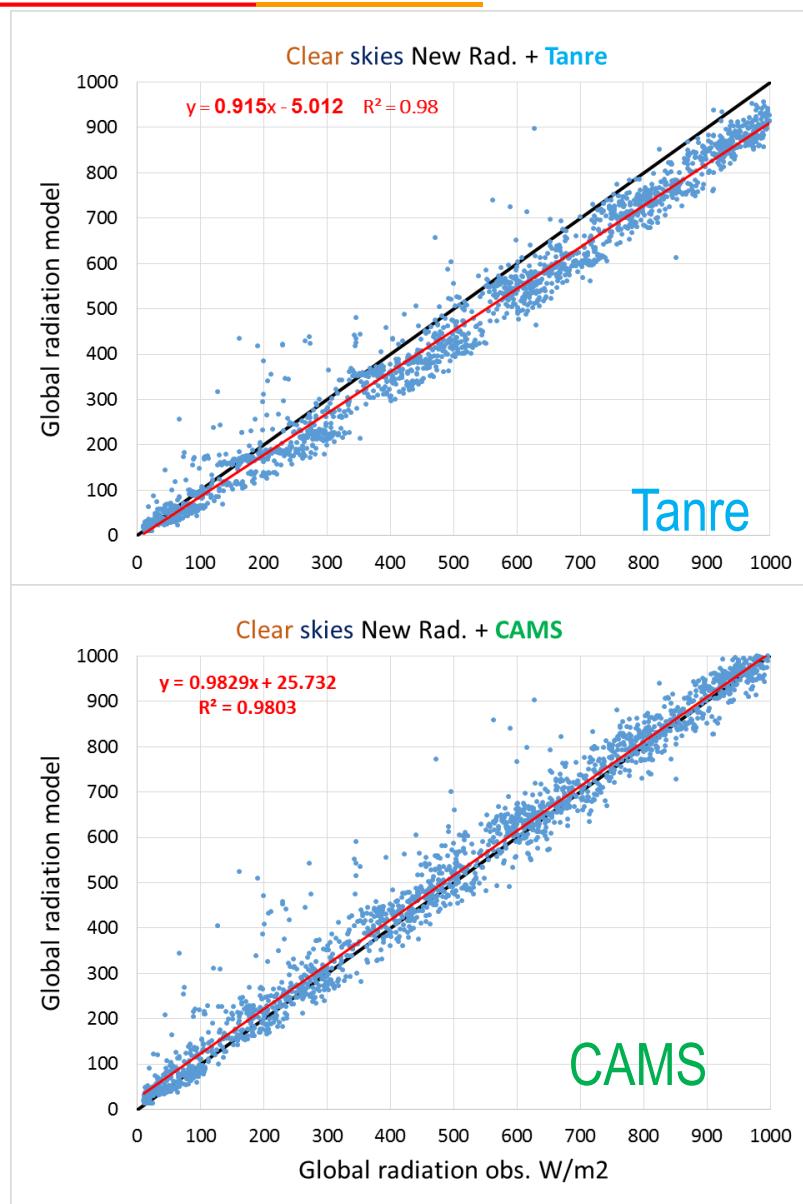

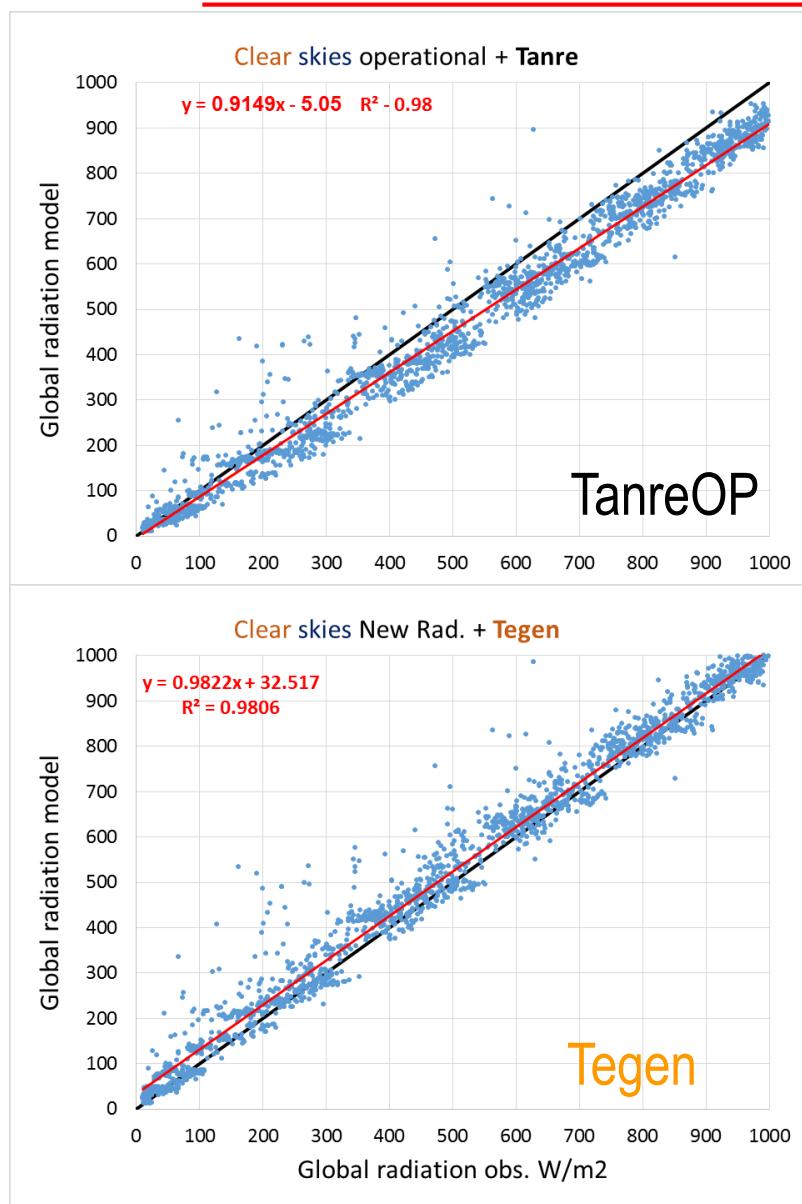

## The Verification system

- **29 test cases** in different weather situations lead time of 30h/42h in 2015-2016
- **10** measurement stations (T2m, GR)
- **1 AEORNET** station in **Sede-Boker** (AOD)
- **Rain** verifications using radar data (10 cases)
- **4 models**: **COSMO 2.8km 5.0** (driving model IFS):
  - Oper. rad. scheme + **Tanre**
  - New rad. Scheme + **Tanre**
  - New rad. scheme + **Tegen**
  - New rad. Scheme + **CAMS**
- **CAMS** data taken from previous day (-24h but -12h is also available)

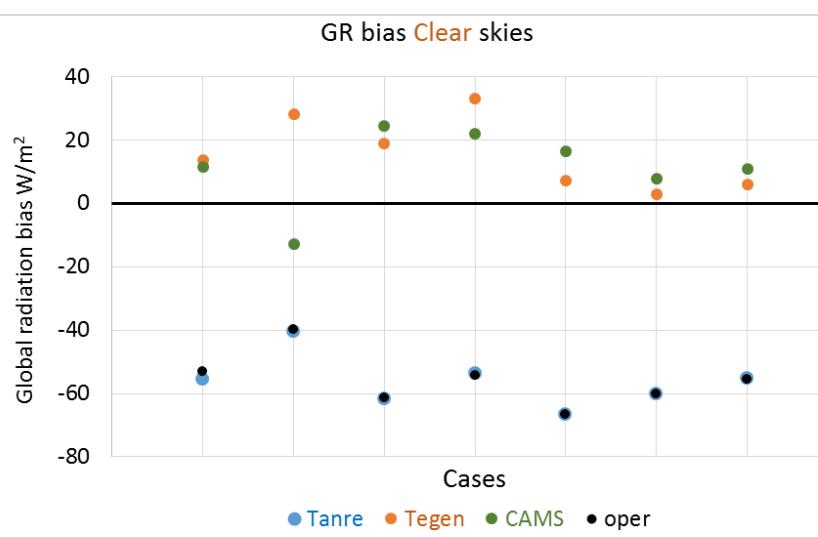

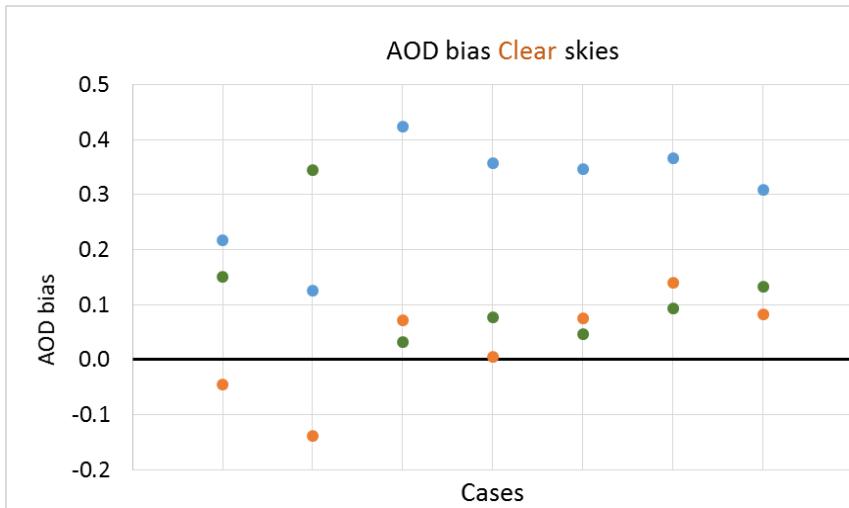

## Global radiation – model vs. Observations clear skies

## Global radiation and AOD – model vs. Observations clear skies

Cases:  
 2015-05-17  
 2015-05-18  
 2016-02-14  
 2016-02-26  
 2016-04-18  
 2016-06-19  
 2016-06-24

AOD bias:  
 Tanre 0.31  
 Tegen 0.03  
 CAMS 0.12

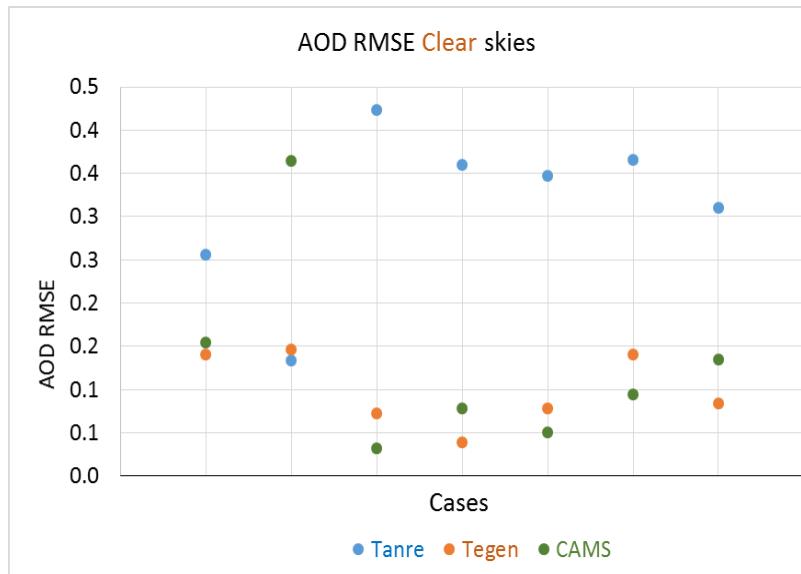

GR bias:  
 TanreOP  $-55.9 \text{ W/m}^2$   
 Tanre  $-56.2 \text{ W/m}^2$   
 Tegen  $15.6 \text{ W/m}^2$   
 CAMS  $11.4 \text{ W/m}^2$

## Global radiation and AOD – model vs. Observations clear skies

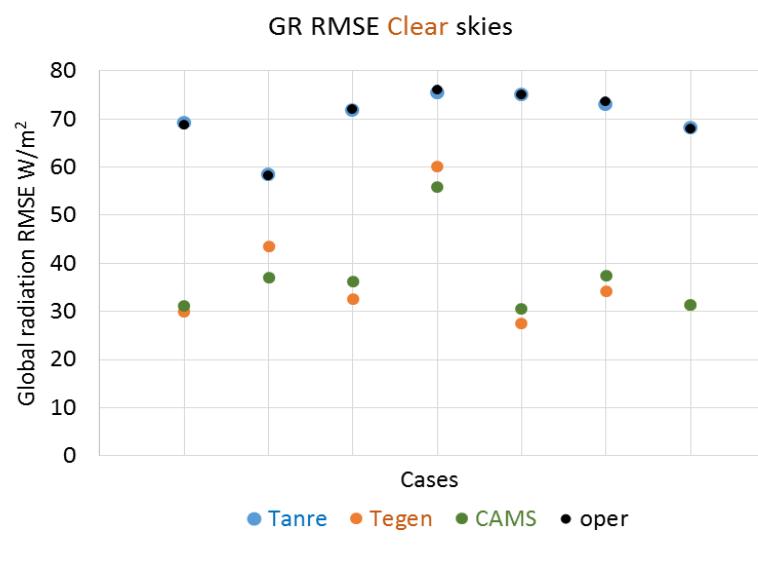

Cases:

2015-05-17  
2015-05-18  
2016-02-14  
2016-02-26  
2016-04-18  
2016-06-19  
2016-06-24

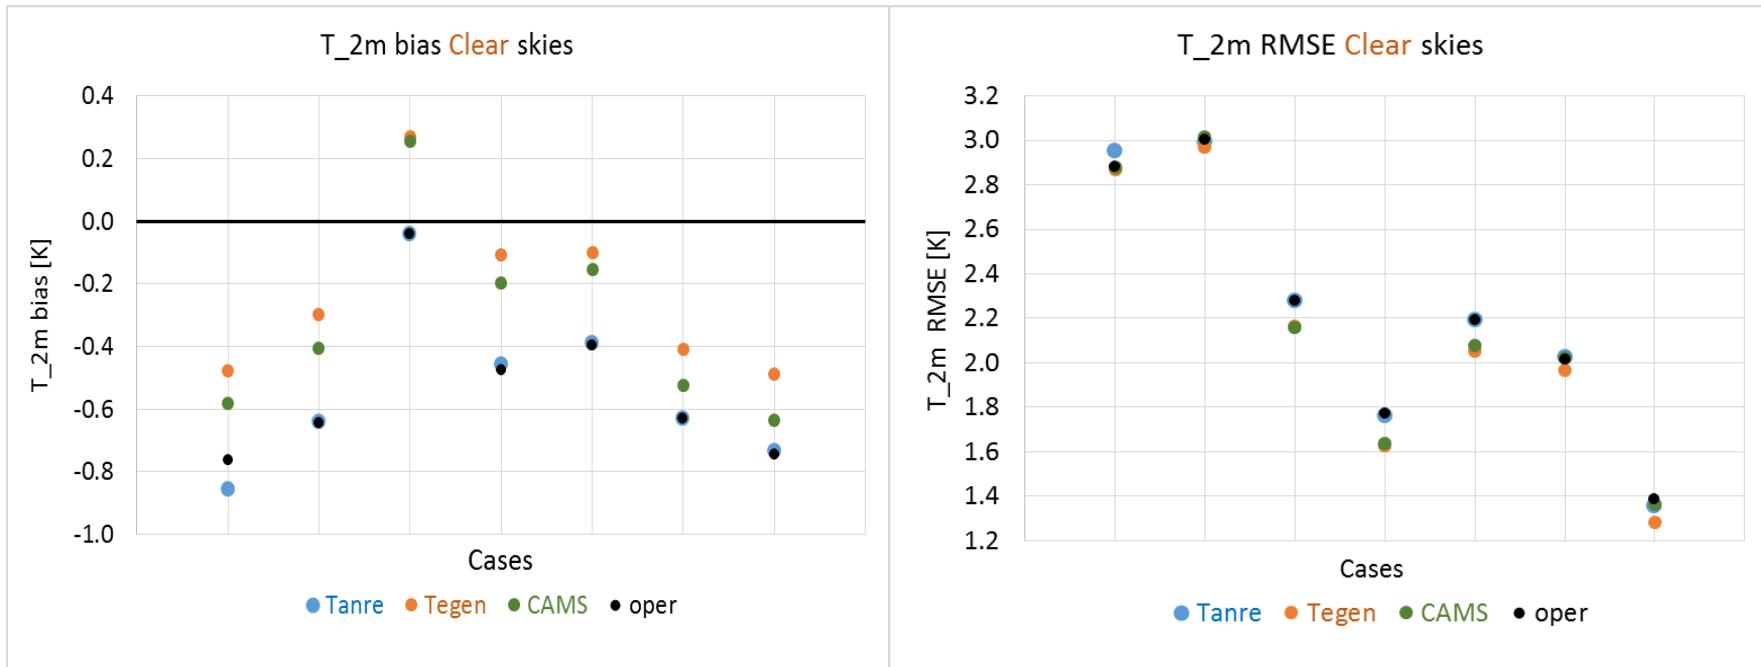

AOD RMSE:  
Tanre 0.31  
Tegen 0.10  
CAMS 0.13

GR RMSE:  
TanreOP 70.2 W/m<sup>2</sup>  
Tanre 70.1 W/m<sup>2</sup>  
Tegen 37.0 W/m<sup>2</sup>  
CAMS 37.1 W/m<sup>2</sup>

## 2m-Temperature – model vs. Observations clear skies

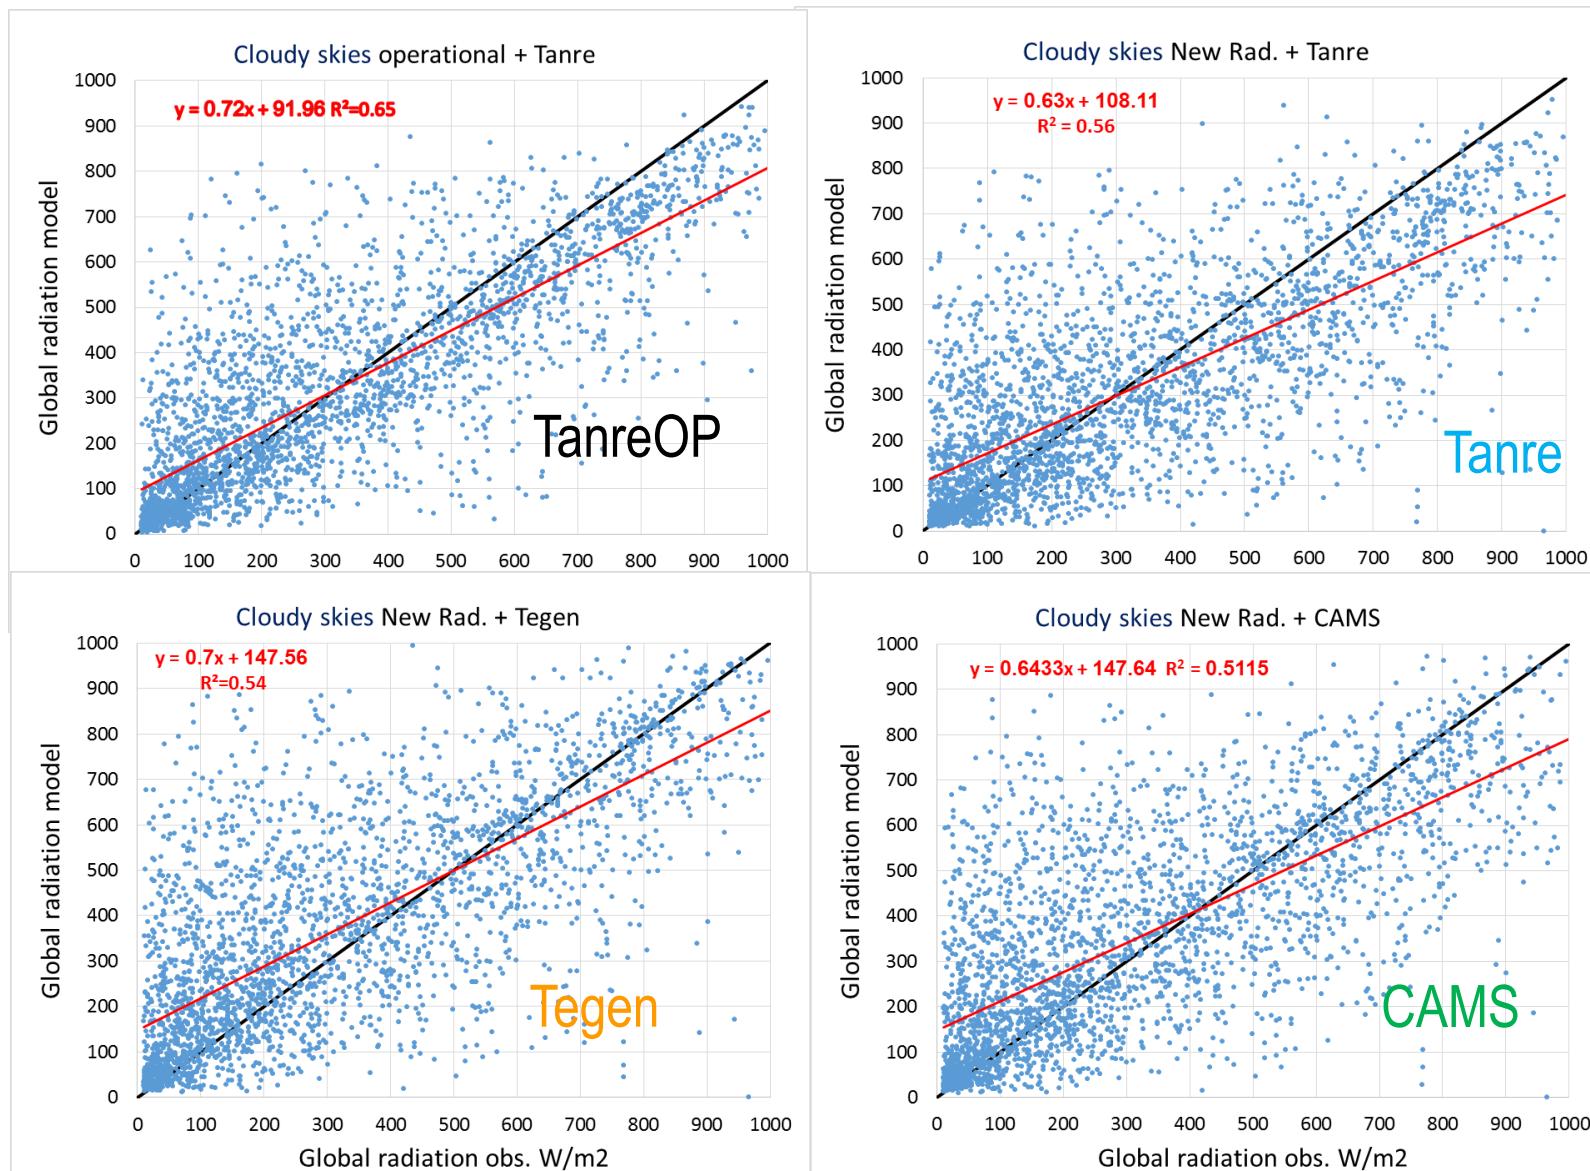

### T2m bias:

TanreOP	-0.5 K
Tanre	<b>-0.5 K</b>
Tegen	<b>-0.2 K</b>
CAMS	<b>-0.3 K</b>

### T2m RMSE:

TanreOP	2.2 K
Tanre	<b>2.2 K</b>
Tegen	<b>2.1 K</b>
CAMS	<b>2.2 K</b>

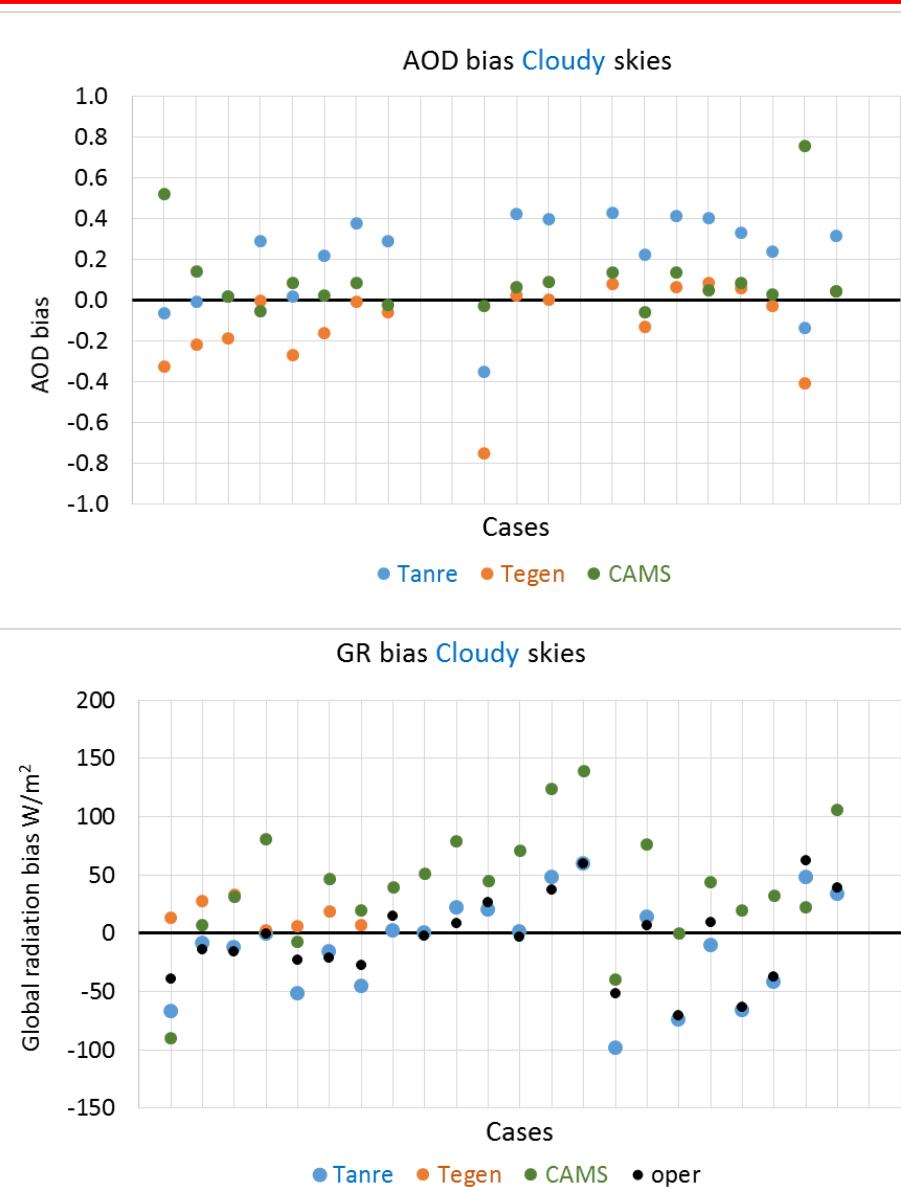

## Global radiation – model vs. Observations cloudy skies

## Global radiation and AOD – model vs. Observations cloudy skies

Cases:

- 2015-05-27
- 2015-09-14
- 2015-09-15
- 2015-10-07
- 2015-10-12
- 2015-11-08
- 2015-11-28
- 2015-12-17
- 2015-12-31
- 2016-01-01
- 2016-01-07
- 2016-01-13
- 2016-01-24
- 2016-01-26
- 2016-02-17
- 2016-02-21
- 2016-02-28
- 2016-03-23
- 2016-04-03
- 2016-04-06
- 2016-04-09
- 2016-04-12

AOD bias:

- Tanre 0.20
- Tegen -0.12
- CAMS 0.11

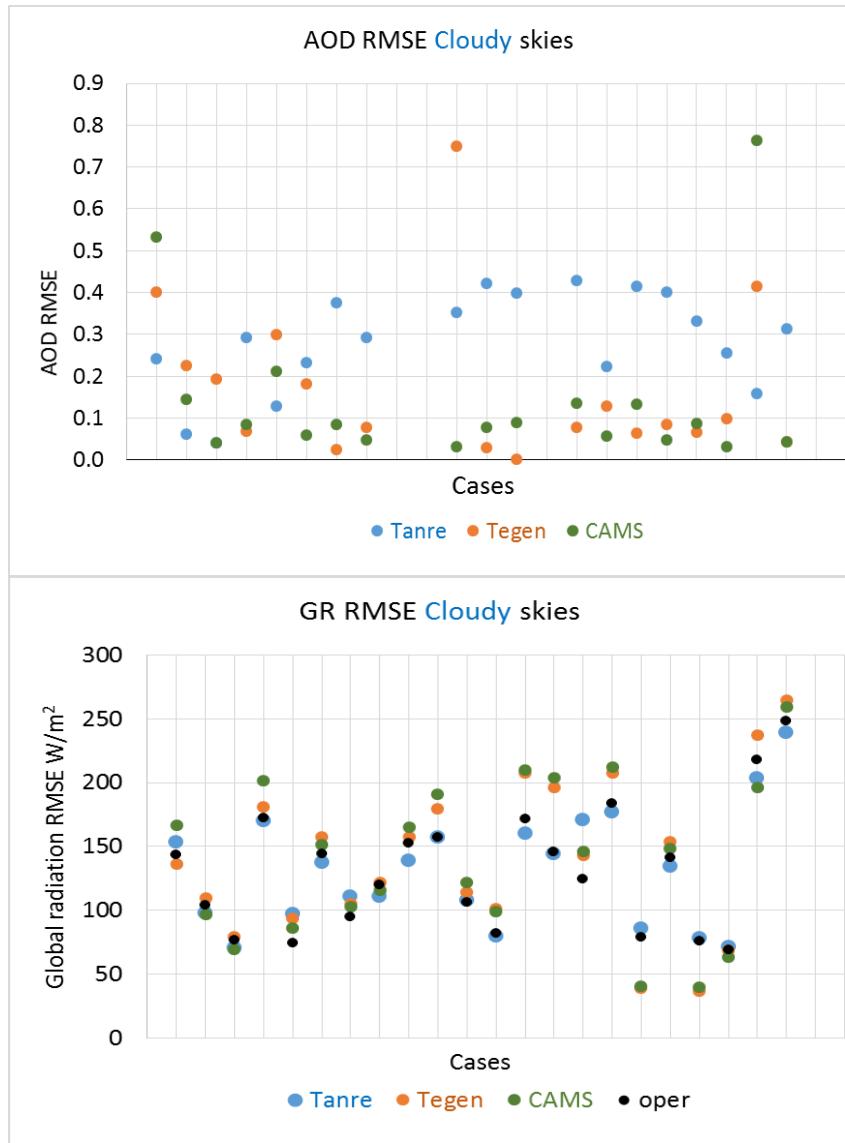

GR bias:

- TanreOP -4.8 W/m<sup>2</sup>
- Tanre -11.1 W/m<sup>2</sup>
- Tegen 54.2 W/m<sup>2</sup>
- CAMS 40.7 W/m<sup>2</sup>

## Global radiation and AOD – model vs. Observations cloudy skies

Cases:

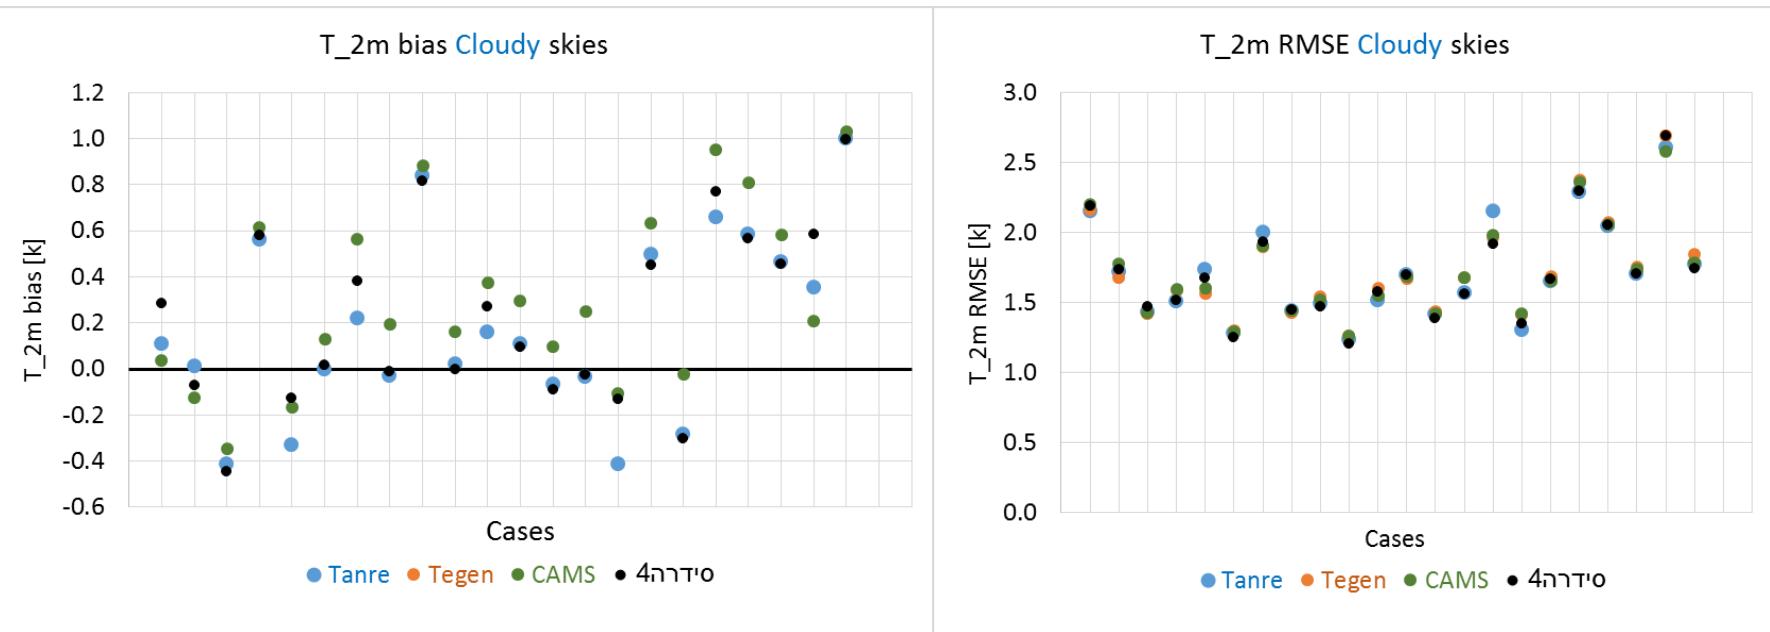

- 2015-05-27
- 2015-09-14
- 2015-09-15
- 2015-10-07
- 2015-10-12
- 2015-11-08
- 2015-11-28
- 2015-12-17
- 2015-12-31
- 2016-01-01
- 2016-01-07
- 2016-01-13
- 2016-01-24
- 2016-01-26
- 2016-02-17
- 2016-02-21
- 2016-02-28
- 2016-03-23
- 2016-04-03
- 2016-04-06
- 2016-04-09
- 2016-04-12

AOD RMSE:  
 Tanre 0.28  
 Tegen 0.17  
 CAMS 0.14

GR RMSE:  
 TanreOP 131.1 W/m<sup>2</sup>  
 Tanre 131.5 W/m<sup>2</sup>  
 Tegen 140.5 W/m<sup>2</sup>  
 CAMS 140.4 W/m<sup>2</sup>

## 2m-Temperature – model vs. Observations cloudy skies

### T2m bias:

TanreOP 0.23 K

Tanre 0.18 K

Tegen 0.42 K

CAMS 0.32 K

### T2m RMSE:

TanreOP 1.70 K

Tanre 1.71 K

Tegen 1.73 K

CAMS 1.72 K

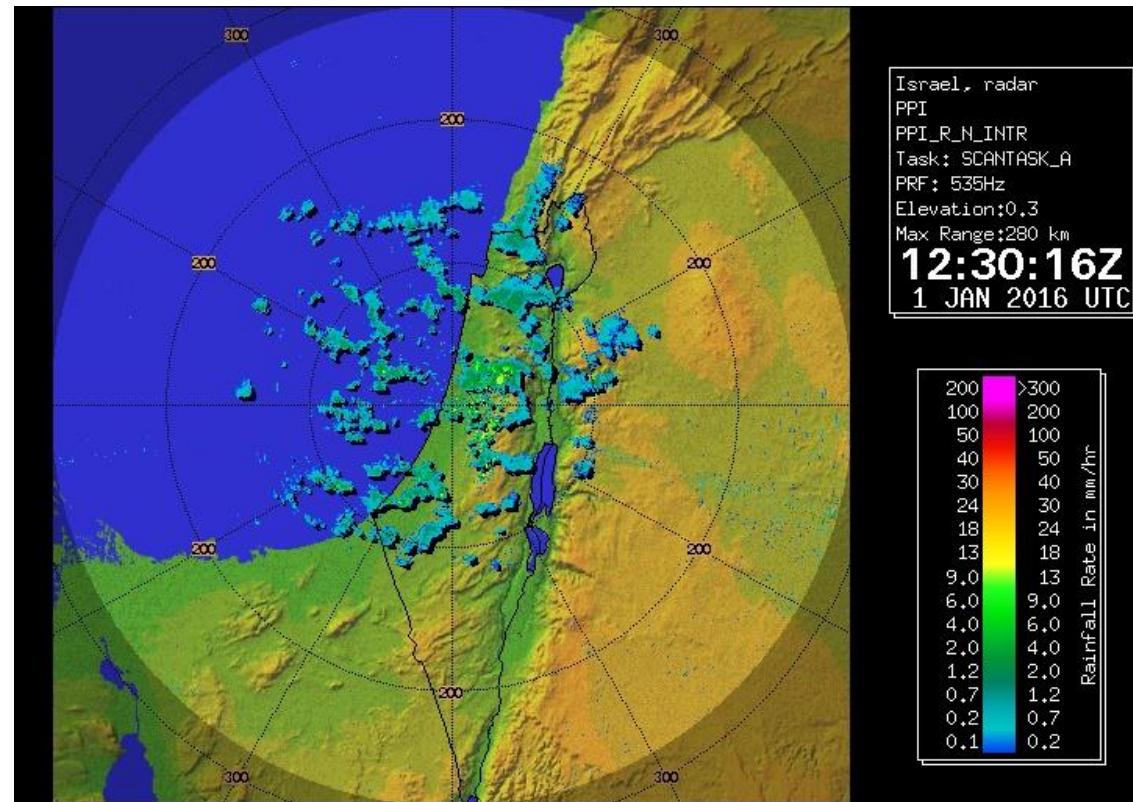

## Rain verification

Verifications using radar corrected with rain gauge measurements  
 (Credit: Elyakom Vadislavski, IMS)

Rainy days

Cases:

2015-10-07  
 2015-11-08  
 2015-12-17  
 2015-12-31  
 2016-01-01  
 2016-01-07  
 2016-01-24  
 2016-01-26  
 2016-02-21  
 2016-04-12

## Rain forecast skill verifications

- Cumulative Fractional Skill Score for several rainfall thresholds
- For a 50km radius
- 6h accumulating maps
- Compared with gauge-corrected radar maps

$$FSS = \sum_{th} FSS(th)$$

$$FSS(th) = 1 - \frac{BS(th)}{BS_{worst}(th)}$$

$$BS(th) = \sqrt{(M_{i,j} - O_{i,i})^2}$$

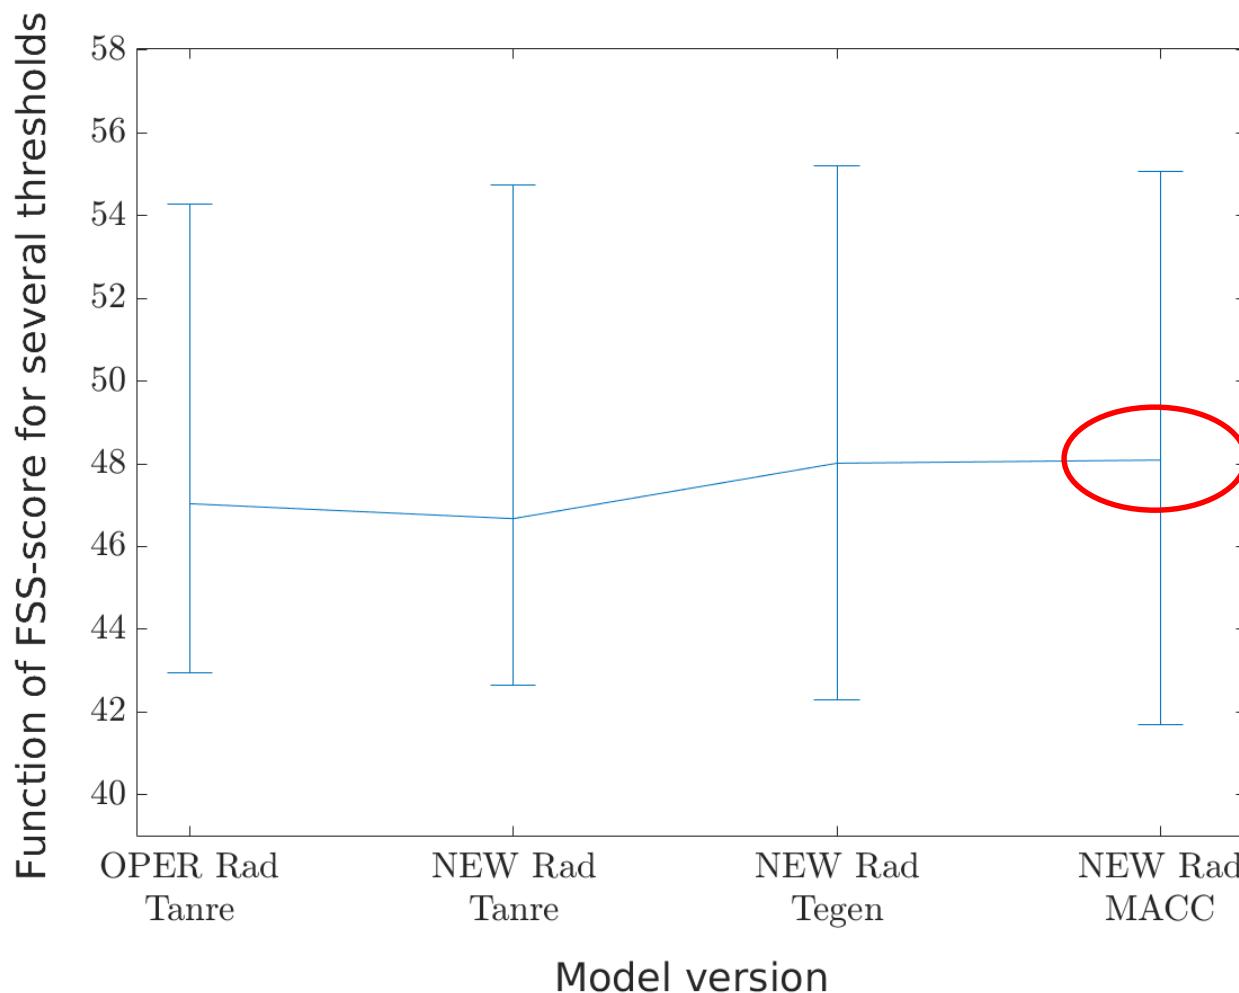

$$BS_{worst}(th) = \sqrt{M_{i,j}^2 + O_{i,i}^2}$$

$M_{i,j}$  = fraction of grid points above threshold in the **model**

$O_{i,j}$  = fraction of grid points above threshold in **observations**

## Rain forecast skill verifications

Cases:  
 2015-10-07  
 2015-11-08  
 2015-12-17  
 2015-12-31  
 2016-01-01  
 2016-01-07  
 2016-01-24  
 2016-01-26  
 2016-02-21  
 2016-04-12

## Concluding remarks

### Clear sky:

- Tanre climatology has AOD overestimation resulting negative bias of global radiation and surface temperature (-0.5K)
- Slight performance differences between Tegen and CAMS

### Cloudy sky:

- CAMS AOD forecast performs better than other models in terms of bias and RMSE
- The cloud-rad scheme is tuned for the (operational + Tanre) model, thus the GR bias is almost zero in this case – **under estimation of cloud thickness** to compensate for the aerosols over estimation
- GR & T2m RMSE is similar in all models
- Radiation-Aerosols model have small impact on rain forecast

## Bottom line

- The new cloud-rad scheme (RC)<sup>2</sup> perform well and gives better results for the surface temperature compared to the operational scheme.
- It is “safe” to use CAMS as the aerosols input for radiation. In clear skies condition it is good as or better than climatology models.
- After parameter tuning of the cloud-rad scheme, COSMO-CAMS is expected to give the best annual results (lets wait and see....).
- No added computational cost in model run but the pre-processing (int2Im, files download etc.) takes little more time

## Outlook

- New radiation scheme tuning: 10 selected tuning parameters using CALMO methodology. Planned: 1 year run on CSCS/ECMWF computers
- Testing Kinne (2012) climatology **itype\_aerosol = 3** 
- Coupling CAMS aerosols to microphysics
- Implementation of ICON-ART prognostic aerosols in COSMO
- And much more...
