Update on high-resolution experiments with ICON-LAM

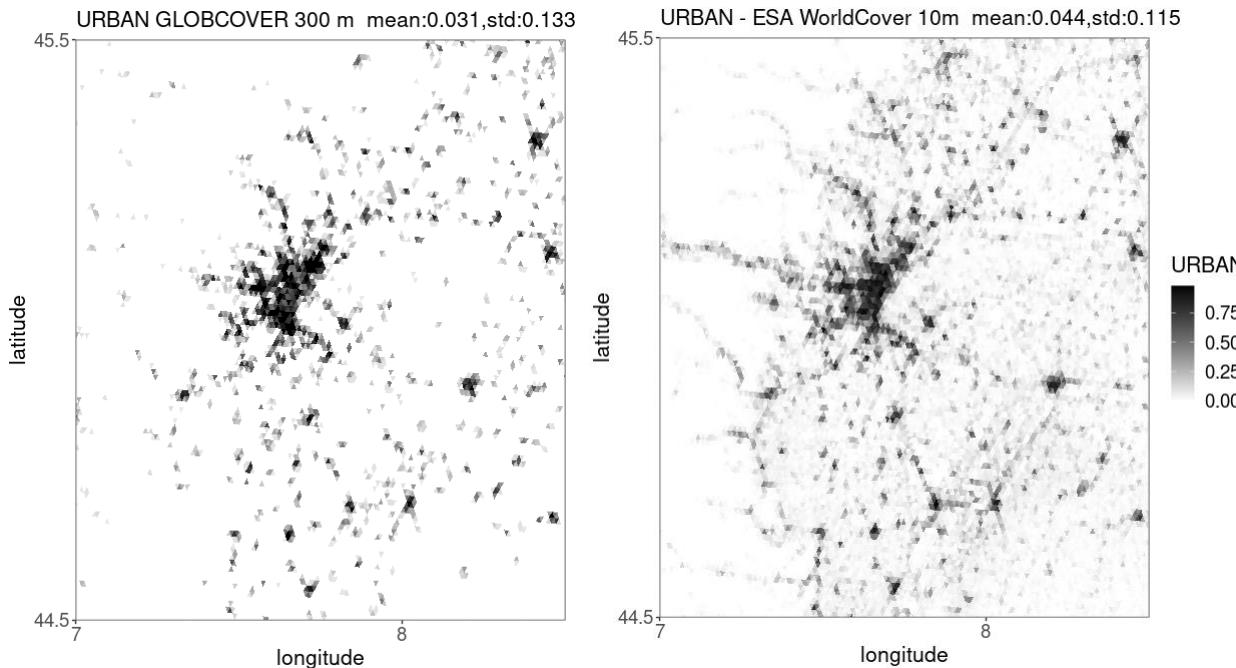

Valeria Garbero, Arpa Piemonte

ICON set-up

2 different Land Use Classification:

1. **GLOBCOVER 300 m** resolution (2019),
23 Land Use Classes, URBAN: LU=19
2. **ESA WorldCover 10 m** resolution (2021),
10 Land Use Classes, URBAN: LU=50*

*Roni Drori (IMS) converted 10 ESA LU classes into 23 GlobCov classes

ICON+TERRA_URB experiments

1 week simulation in hindcast mode during a heat waves: 9-16 June 2022

ICBC	Res	LU	Lterra_urb	c_soil	tkmmin	tkhmin	Name	
ICON-EU	1.3 km	GLOBCOVER	FALSE	1.25	0.75	0.5	CTRL	—
ICON-EU	1.3 km	GLOBCOVER	TRUE	1.25	0.75	0.5	URB1	—
ICON-EU	1.3 km	ESA	TRUE	1.25	0.75	0.5	URB2	—
ICON-EU	1.3 km	ESA	TRUE	0.8	0.75	0.5	URB3	—
ICON-EU	1.3 km	ESA	TRUE	1.25	0.3	0.3	URB4	—

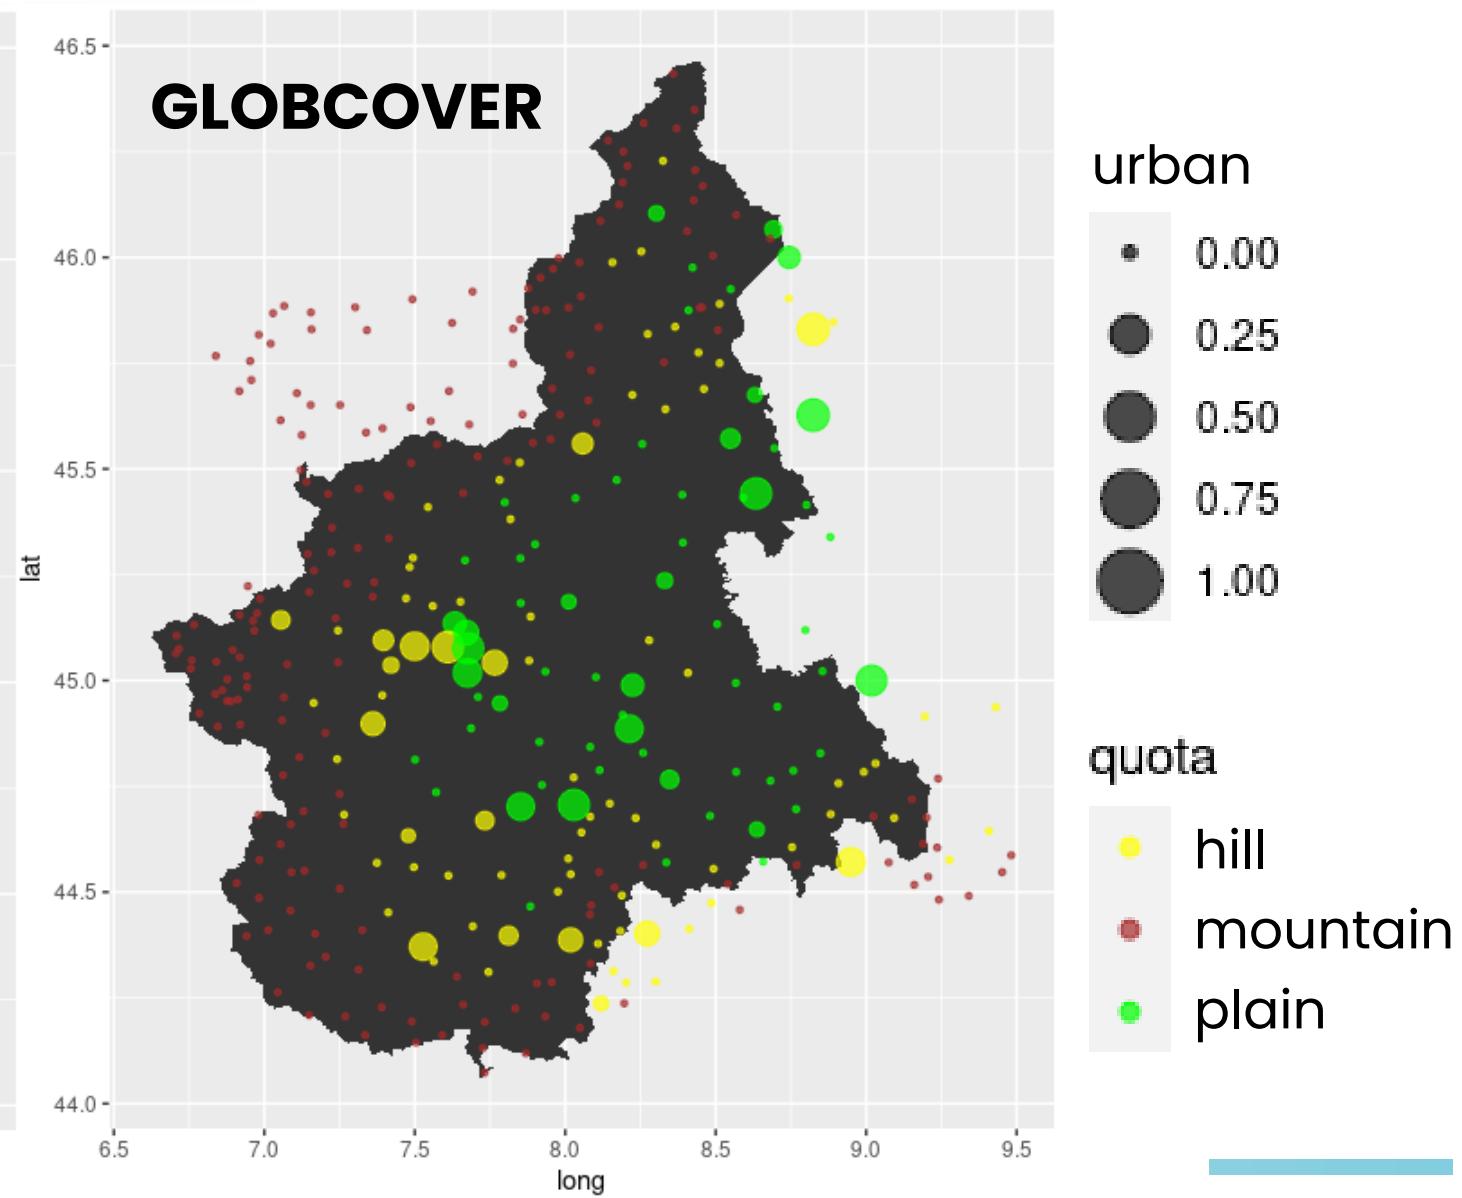

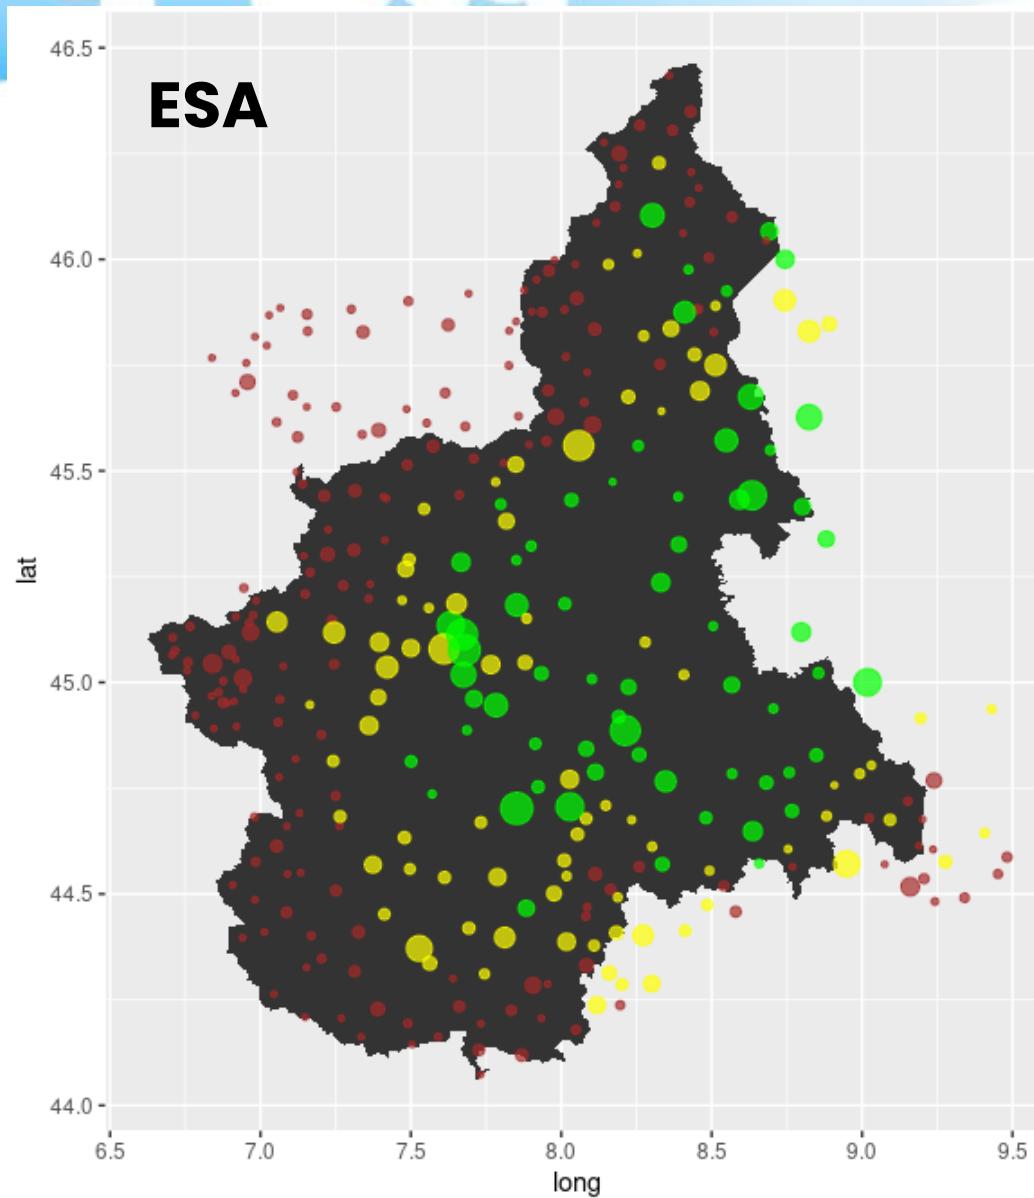

} DWD
namelist

lurbalb =TRUE
lurbahf=TRUE
itype_eisa=3

Tuning suggested by Pavel:

1. Reducing c_soil to reduce the fraction of evaporating surface
2. Reducing tkhmin and tkmmin to reduce the minimum allowed turbulence kinetic energy

Verification: Arpa Piemonte stations

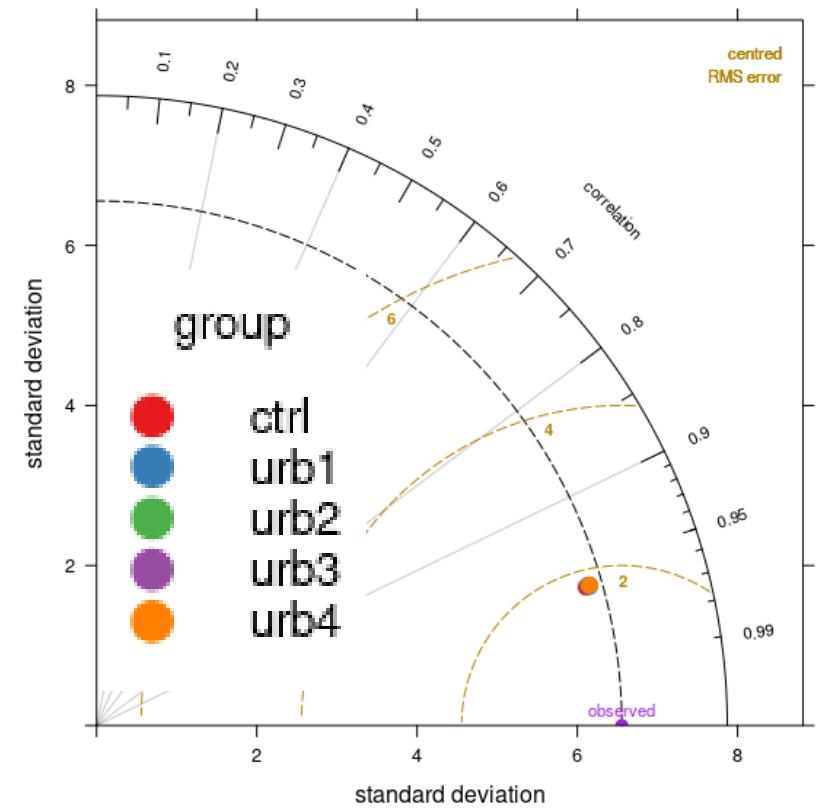

2M TEMPERATURE

Name	MB	RMSE	r	rank°
CTRL	-0.263	1.80	0.962	5
URB1	-0.175	1.79	0.962	4
URB2	-0.0209	1.81	0.961	3
URB3	0.139	1.81	0.962	1
URB4	-0.0226	1.80	0.962	2

*The ranking is based the COE performance, *Coefficient of Efficiency* based on Legates and McCabe

- **CTRL** underestimates mean 2m temperature
- **URB1** (`lterra_urb=TRUE`) slightly reduces MB and RMSE
- **URB2** (`ESA lu`) improves MB but increases RMSE
- **URB3** (`c_soil=0.8`) overestimates mean 2m temperature
- **URB4** (`thmmmin=thkmin=0.3`) slightly reduces RMSE and improves r

Taylor Diagram: 2m temperature (° C)

Good and comparable performance for all configurations, but improvement in MB for urban ones

2M TEMPERATURE

Name	MB	RMSE	r	rank
CTRL	-0.281	1.72	0.964	5
URB1	-0.21	1.71	0.964	4
URB2	-0.0977	1.70	0.964	3
URB3	0.0677	1.68	0.964	1
URB4	-0.0891	1.70	0.964	2

- **CTRL** underestimates mean 2m temperature both during night and day
- **URB1** (`lterra_urb=TRUE`) reduces MB and RMSE, particularly during night
- **URB2** (`ESA lu`) improves MB and RMSE during day but during night it overestimates t2m and worsens RMSE and r
- **URB3** (`c_soil=0.8`) improves MB and RMSE during day but worsens MB and RMSE during night
- **URB4** (`thmmmin=thkmin=0.3`) slightly improves indices during night

ESA LU increases RMSE during night

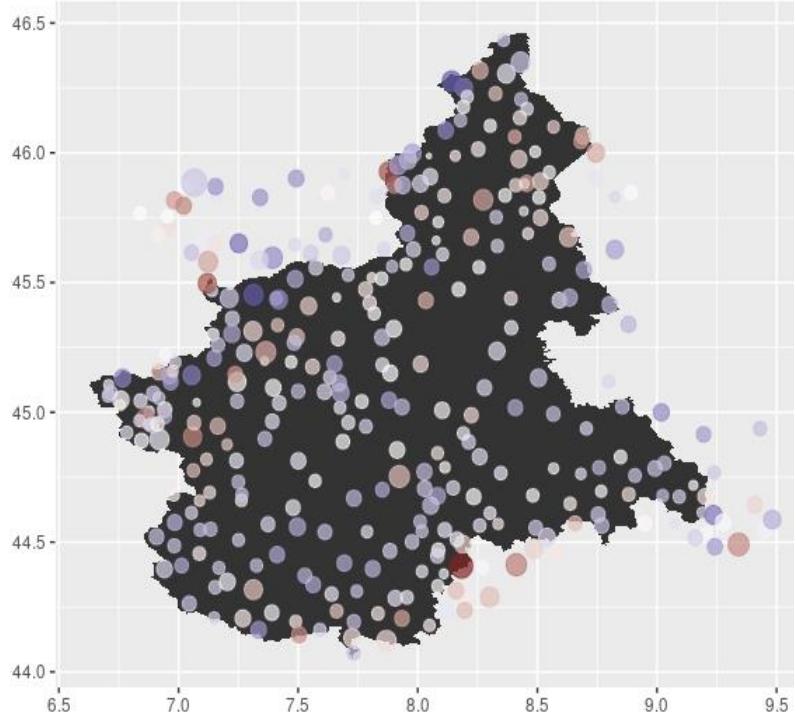

Name	MB	RMSE	R	rank
CTRL	-0.225	1.98	0.924	5
URB1	-0.0908	1.97	0.924	1
URB2	0.144	2.02	0.920	3
URB3	0.290	2.04	0.920	4
URB4	0.119	2.00	0.921	2

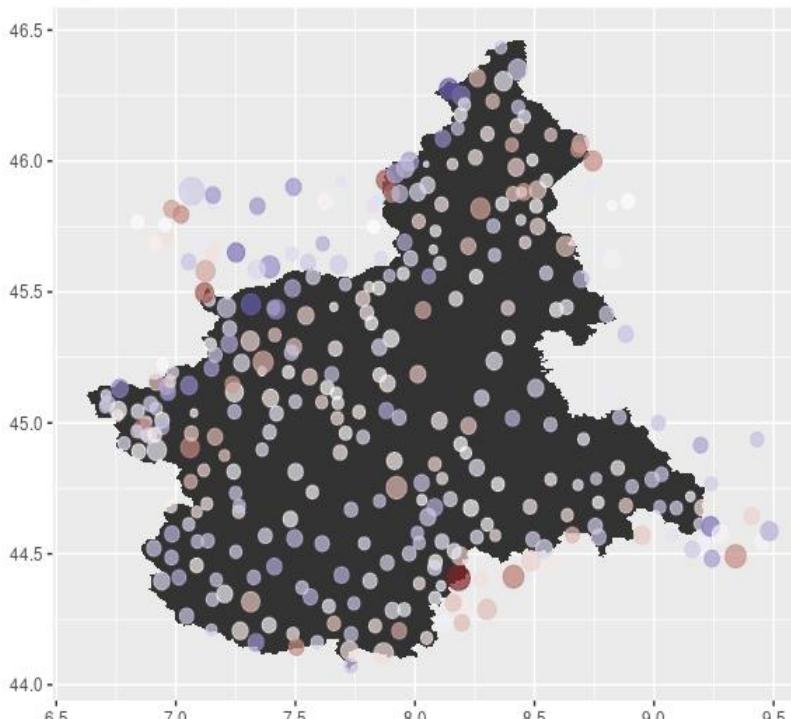

Good and comparable performance for all configurations, but improvement in MB for urban ones, both during day and night

exp=URB2

RMSE

MB

2M TEMPERATURE in «urban» stations

URBAN: ISA>0.5 – GC

Name	MB	RMSE	r	rank
URB3	-0.045	1.47	0.952	1
URB4	-0.177	1.46	0.953	2
URB2	-0.189	1.49	0.951	3
URB1	-0.091	1.53	0.948	4
CTRL	-0.747	1.76	0.948	5

URBAN: ISA>0.5 – ESA

Name	MB	RMSE	r	rank
URB3	0.014	1.37	0.961	1
URB4	-0.126	1.37	0.96	2
URB2	-0.122	1.39	0.961	3
URB1	-0.250	1.48	0.959	4
CTRL	-0.891	1.82	0.953	5

- **CTRL** strongly underestimates mean 2m temperature
- **URB1** (`lterra_urb=TRUE`) reduces MB and RMSE
- **URB2** (`ESA lu`) worsens MB but improves RMSE and r
- **URB3** (`c_soil=0.8`) improves MB (slight overestimation) and RMSE
- **URB4** (`thmmmin=thkmin=0.3`) worsens MB (underestimation) and r

Marked improvement for urban configurations in reproducing 2m temperature in urban stations
 ESA land use classification seems to improve all the indices → URB3 best configuration

PERIURBAN: $0.01 < \text{ISA} < 0.5$ - GC

Name	MB	RMSE	R	rank
URB2	0.250	1.91	0.931	5
URB3	0.430	1.93	0.932	3
URB4	0.239	1.89	0.933	2
CTRL	-0.299	1.83	0.939	4
URB1	-0.020	1.83	0.937	1

PERIURBAN: $0.01 < \text{ISA} < 0.5$ - ESA

Name	MB	RMSE	r	rank
URB2	0.034	1.91	0.942	5
URB3	0.209	1.91	0.942	2
URB4	0.029	1.90	0.942	4
CTRL	-0.273	1.87	0.946	3
URB1	-0.165	1.87	0.945	1

2M TEMPERATURE in «periurban» stations

- **CTRL** underestimates mean 2m temperature
- **URB1** (`lterra_urb=TRUE`) reduces MB (slightly underestimation) and improves r
- **URB2** (`ESA lu`) changes MB (slightly overestimation), worsens RMSE but improves r
- **URB3** (`c_soil=0.8`) worsens MB (overestimation)
- **URB4** (`thmmmin=thkmin=0.3`) slightly improve MB and RMSE

Slight improvements in MB for urban configurations in reproducing 2m temperature in peri-urban stations
 ESA land use classification improves the correlation but increases the RMSE

2M TEMPERATURE in «rural» stations

RURAL: ISA<0.01 – GC

Name	MB	RMSE	R	rank
URB3	0.127	1.81	0.96	1
URB4	-0.034	1.81	0.96	2
URB2	-0.032	1.81	0.96	3
URB1	-0.192	1.80	0.961	4
CTRL	-0.234	1.81	0.961	5

RURAL: ISA<0.01 – ESA

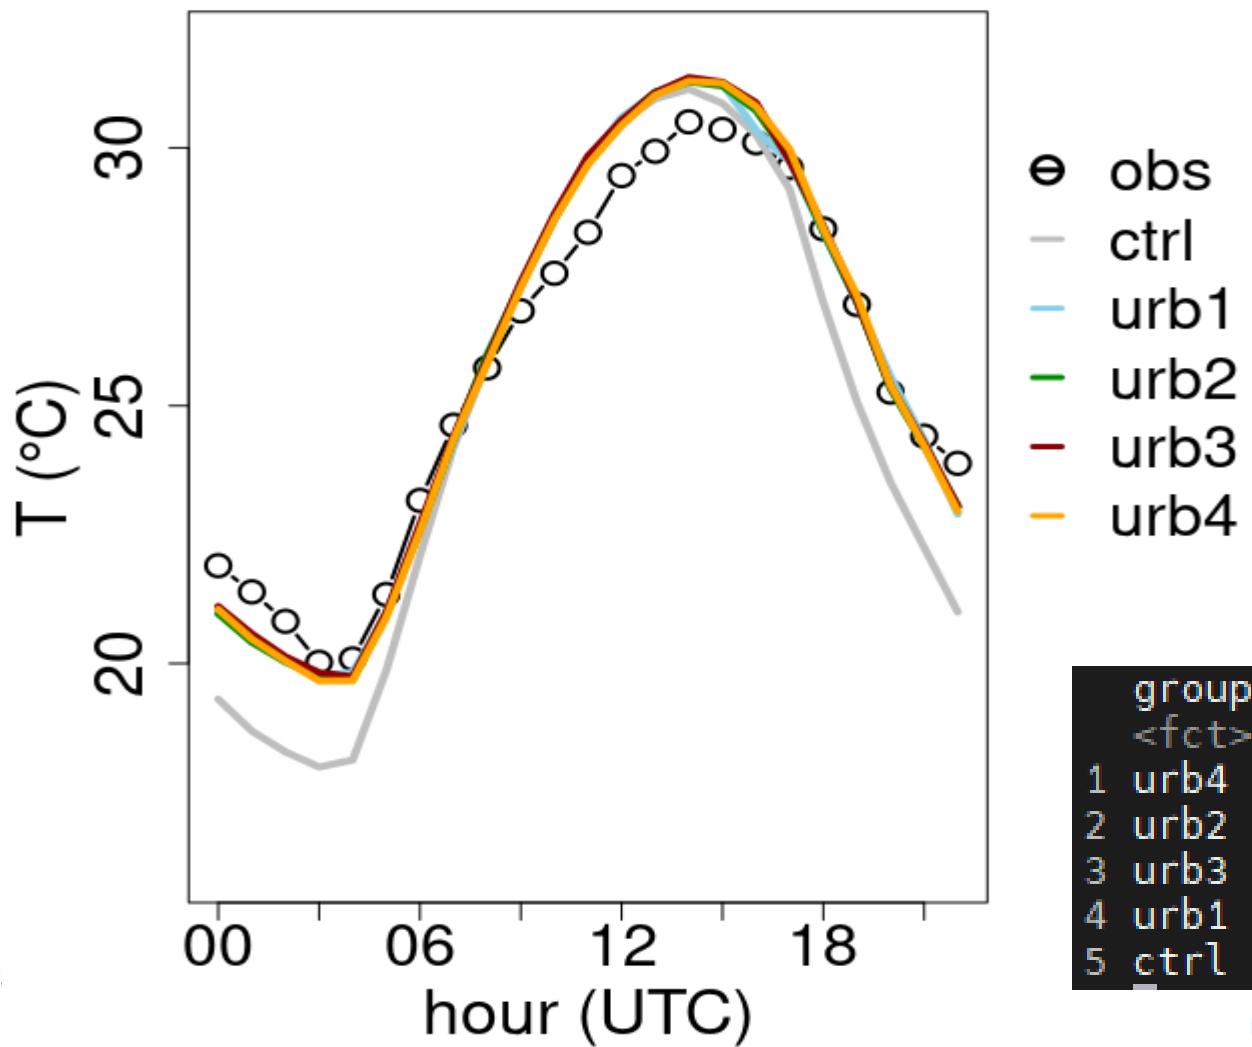

Name	MB	RMSE	r	rank
URB3	0.067	1.71	0.962	1
URB2	-0.074	1.71	0.962	2
URB4	-0.073	1.71	0.962	3
URB1	-0.182	1.73	0.961	4
CTRL	-0.202	1.73	0.961	5

- **CTRL** strongly underestimates mean 2m temperature
- **URB1** (Iterra_urb=TRUE) reduces MB and RMSE
- **URB2** (ESA lu) improves MB (slight underestimation), RMSE and r
- **URB3** (c_soil=0.8) changes MB (slight overestimation)
- **URB4** (thmmmin=thkmin=0.3) does not shows any effect

Marked improvement for urban configurations in reproducing 2m temperature in rural stations
 ESA land use classification seems to improve all the indices -> URB3 best configuration

UHI and UDI in Turin

TO CONSOLATA - BAUDUCCHI

TO CONSOLATA - BAUDUCCHI

CONCLUSIONS AND FUTURE WORKS

Very good preliminary results: TERRA_URB in ICON definitely improves the reproduction of 2m temperature and relative humidity in urban stations

ESA land use classification improves model performance in urban stations, but it worsens performance elsewhere: too few natural classes?

1. Further calibration to obtain optimal configuration. Any suggestions?
2. ECOCLIMAP dataset (33 classes, 10 LCZ urban classes)
3. IFS initial and boundary conditions
