

WG5 Parallel Sessions: Monday 02 September 2024

| WG5 Activities | | Room: Schlauch |
|---|------------------------|--|
| Chair: Flora Gofa | | |
| 09:00 – 10:40 | F. Fundel (20') | FFV2 updates including AI model verification |
| | F. Fundel (20') | News on AI front verification |
| | N. Vela (15') | VAST updated version |
| | P. Kaufmann (15') | Cloud and precipitation verification in ICON-CH models |
| | F. Fundel (10') | Verification of the ICON weather-interpretation |
| | D. Boucouvala (10') | Verification feedback over Greece |
| 10:40 – 11:00 | BREAK | |
| 11:00 – 12:30 | S. Gabrian (15') | Verification activities in NMA |
| | Artur Surowiecki (10') | Verification activities in IMGW-PIB |
| | N. Vela (15') | Precipitation FSS for COSMO CP |
| | S. Gabrian (25') | NMA task report for CP activities |
| | F. Gofa (25') | Presentation of seasonal CP reports |
| 12:30 – 14:00 | LUNCH | |
| WG5 PP-CARMENS: Joint with WG7 Room: Schlauch | | |
| Chair: Stefan Gabrian | | |
| 14:00 – 15:30 | S. Gabrian | Status of PP-CARMENS |
| | All | Short presentations from all PP participants |
| | All | Open Issues - Discussion |
| 18:00 – | ICE BREAKER | |

Last entries

comments/remarks at the END of presentations (when time allows)**

Common Plots Activity

*F. Fundel, J. Linkowska, N. Vela, S. Gabrian,
S. Dinicila, M.S.Tesini, F. Sudati, F. Batignani, D. Boucouvala, P. Kaufmann,
M. Zosicz, P. Khain, F.Gofa,....*

Common Plots Highlights: 2023-24

A. FF verification

- ✓ Migration to FFV2 – documentation
- ✓ MEC for IFS: included since SON2024 for all parameters in ComA1
- ✓ Include COSMO-LEPS control run with det models (started in August 2023)
- ✓ New Time series and HeatMap plots for long term trends

Additional: restrict forecast horizon, uniform length in model name for legend, added more parameters: 2mRH, 3h&6h Preci (all intervals)

Critical: Driving models (IFS, ICON, LEPScntr) currently only in A1 only

B. Conditional verification

- ✓ 2mT verification with thresholds on TCC (condition based on obs)
- ✓ Elevation stratification

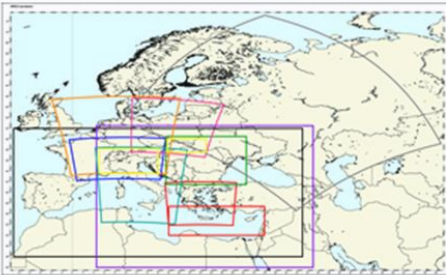

Critical: Conditioning based on external information (constant fields) necessary – performed by Felix previous years

C. Fuzzy verification

- ✓ include FBI and TS indices
- ✓ new software version with additional features – to be disseminated after GM2024

D. General Information

- ✓ FTP Platform for data exchange – NMA provided server with increased autonomy for WG5
- ✓ Guidelines for current year were adapted to new requirements and sent to users: necessary?
- ✓ **Constant delay in data exchange, incomplete data series, extra work load for NMA, not enough time to analyze before the GM**
- ✓ Annual Verif Report is prepared for new Newsletter format with trends from previous years

SUMMER

2m Temp

WINTER

Driving models: ICON-Global performs better than COSMO+IFS.

HighRes LAM: consistency in performance among CA regions

SysEr: Diurnal cycle (DC) of **RMSE** is present in all models.

Large Errors from **initialization** of run. Reduced RMSE DC with ICON models **especially reduction in BIAS DC (black+red+yellow)**.

SysEr: Larger error of 2mT at **night** and early morning in **winter** and at **midday** in the **summer**.

SUMMER

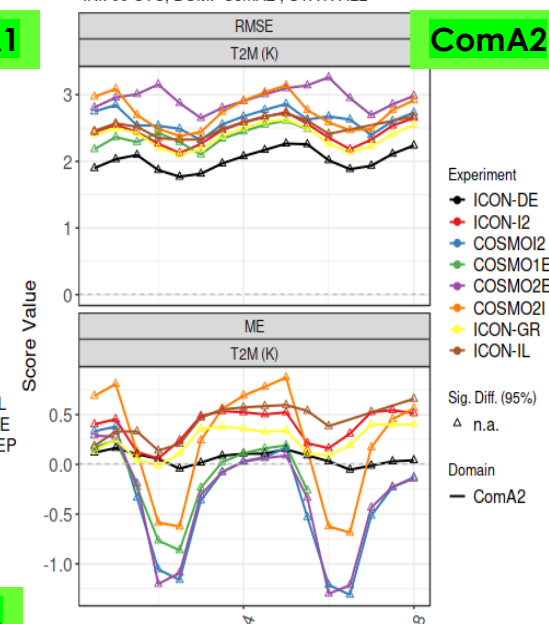

SysEr: Underestimation during **summer** warm hours. Overestimation during summer at night hour, but reduced with ICON

2023/01/01-00UTC - 2024/03/31-22UTC

SysEr: Systematic
ModDp: Model dependant

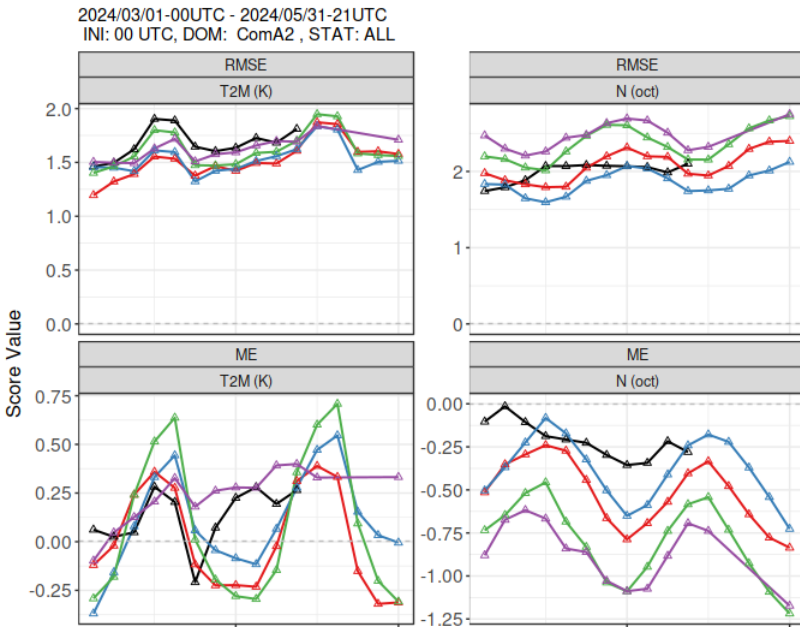

Condition on Cloudiness

C1. 2mT verification when: (condition on obs) Total cloud cover observation $\geq 75\%$
C2 2mT verification when: (condition on obs) Total cloud cover observation $\leq 25\%$

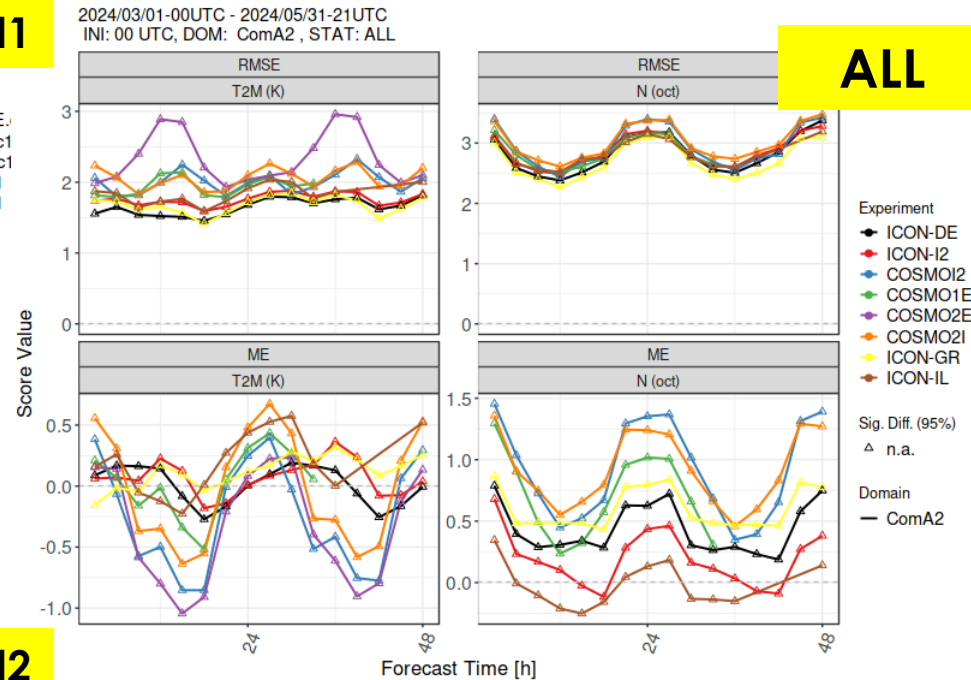

MAM2024

ComA2

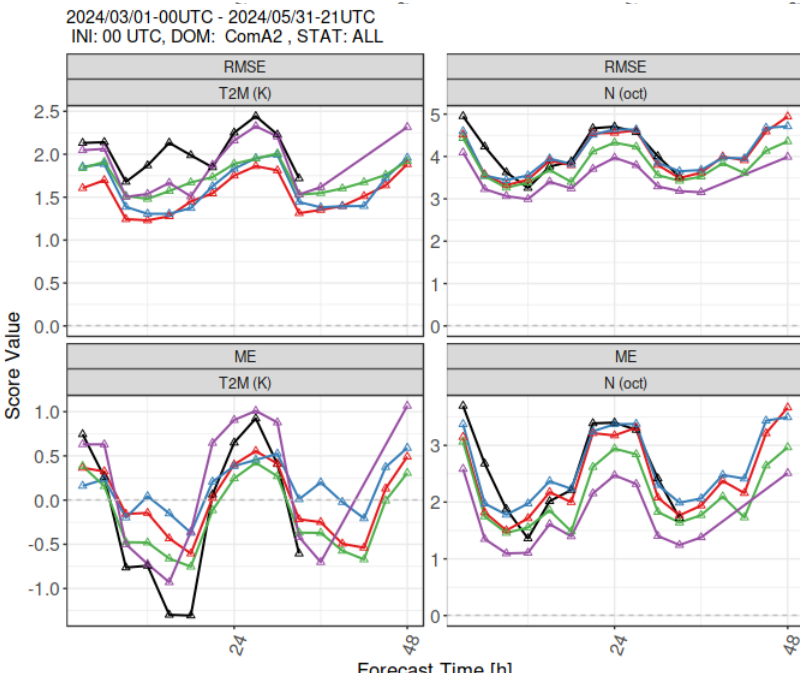

ALL

Cond1

Cond2

SysEr : Higher **2mT** errors for **low cloudiness**

SysEr : Underestimation of 2mT for CS in all models, in the **summer @noon**

SysEr : Overestimation of 2mT under cloudy conditions with ICONs **@night**

Cloud Cover

SysEr : Diurnal cycle of both **ME/RMSE** for TCC remains strong in all models.

SysEr : Large errors (2.5-3oct) **winter**, larger errors in **summer** (up to 4 oct)

SysEr : Higher errors during **nighttime** for all models

SysEr : TCC performance in **winter** is similar but improved with ICON overall especially w.r.t. to the **overestimation** at night.

ModDp : Higher **underestimation** for TCC in warm hours of the day with ICON in **winter**

ModDp : In the **summer** larger variability of ME and min/max among models

SUMMER

Wind speed

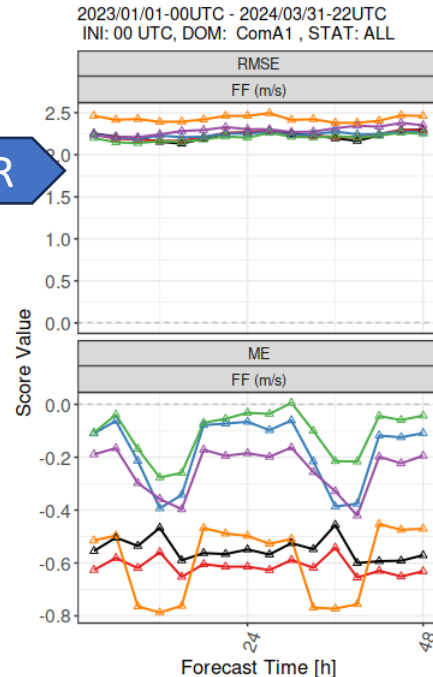

WINTER

Driving models: No significant differences in RMSE except IFS
HighRes LAM: No differences in RMSE among models mainly in winter

SysEr: Larger error cycle in summer

ModDp: negative bias in all seasons with max during nighttime in **ICON** models for both seasons, positive bias of **COSMO** models

SUMMER

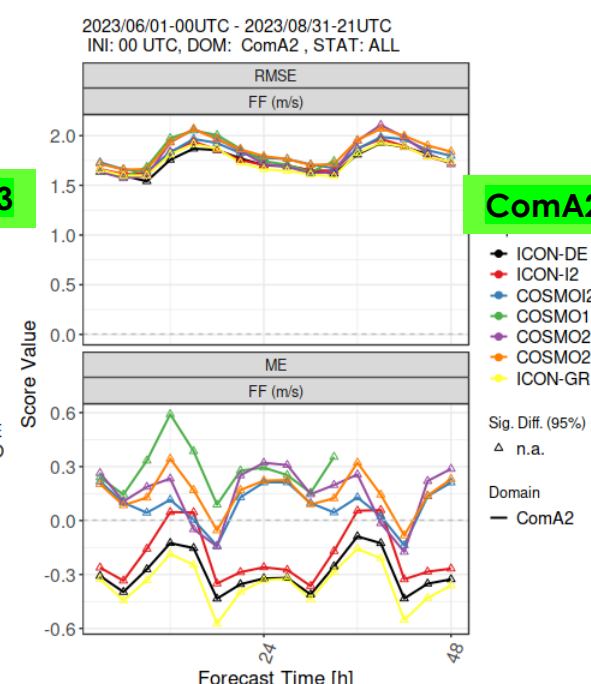

ComA1

ComA2

ComA3

ComA2

Pressure

SysEr: Clear improvement with **ICON** in errors and reduced tendency of increase with lead time in esp. in **winter**

ModDp: **Underestimation** of Pressure with **ICON** during summer+fall

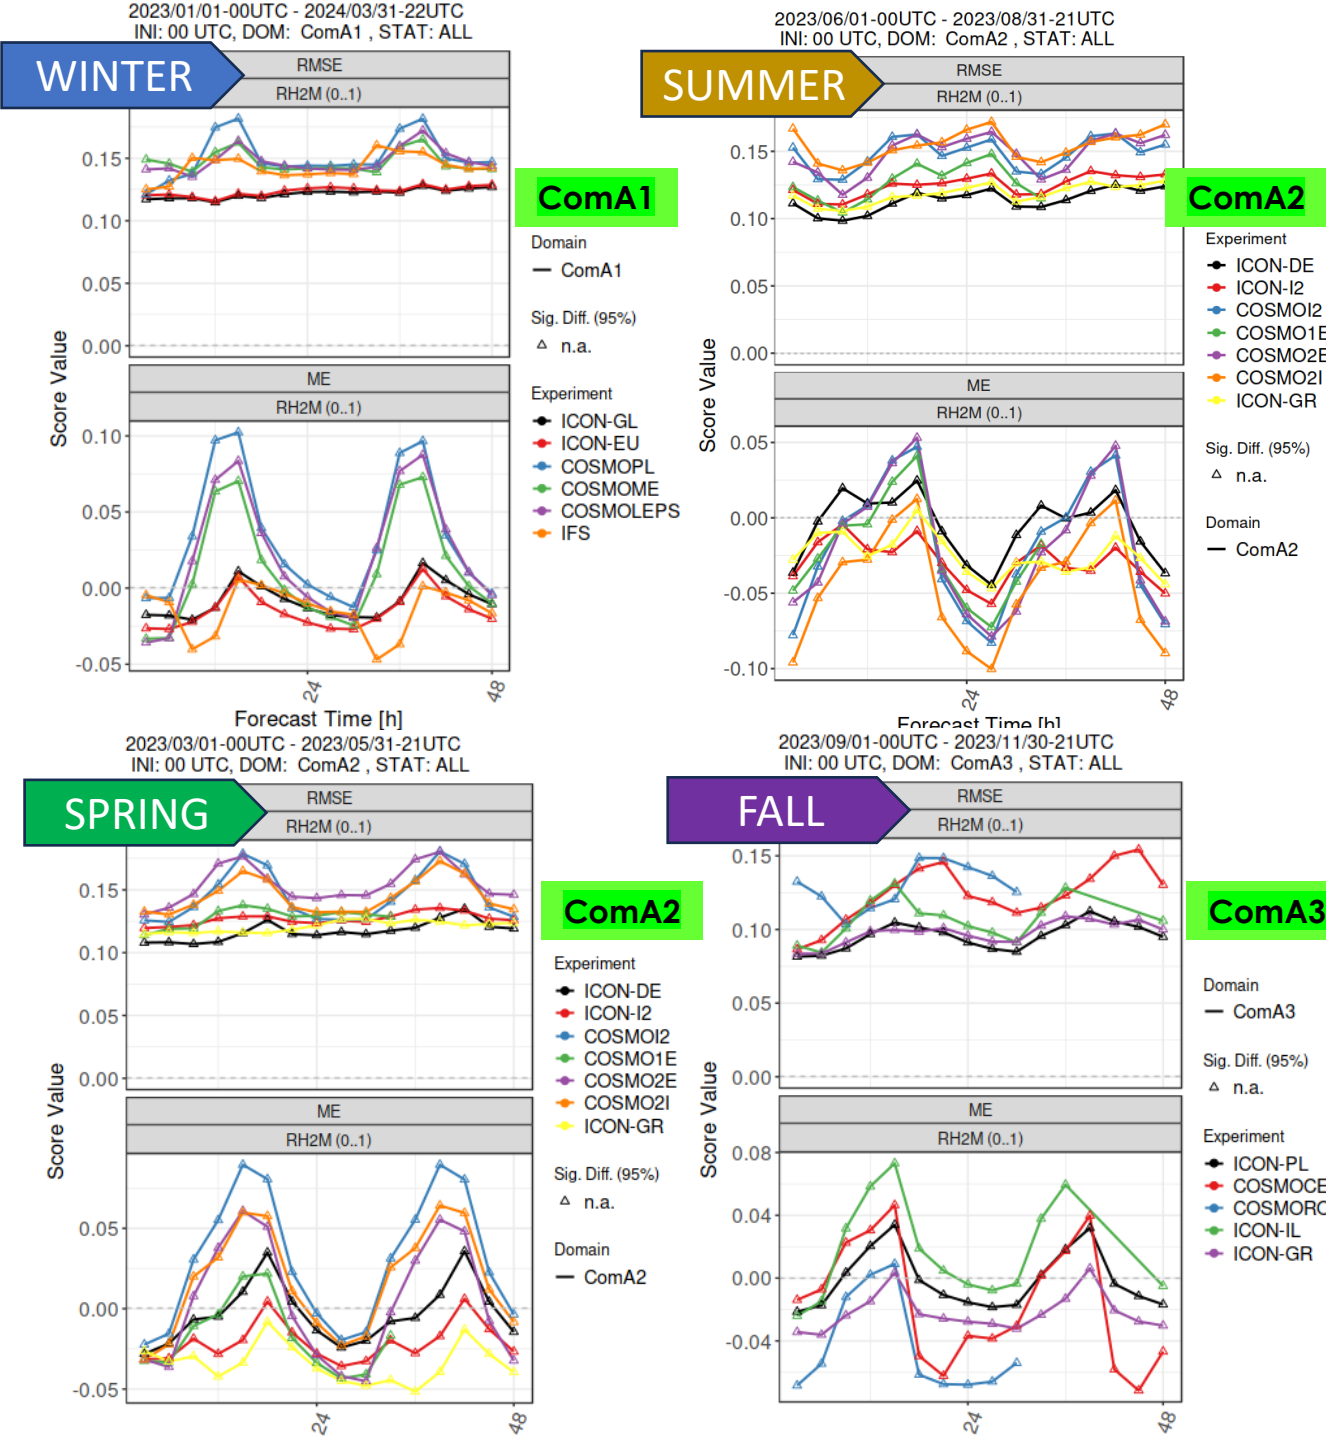

Humidity

SysEr : RelHum and Td
BIAS diurnal cycle,
strongly reduced in ICON
models.

SysEr : While RMSE is
reduced with **ICON**, errors
are attributed to the
overestimation during
daylight hours and the
underestimation at night
during almost all seasons

SysEr : ICON models
generally **drier**, esp. in
winter

6h Precipitation

2023.06.11-00UTC - 2023.08.31-21UTC
VAL: ALL UTC, INI: 00, STAT: ALL, DOM: ComA2

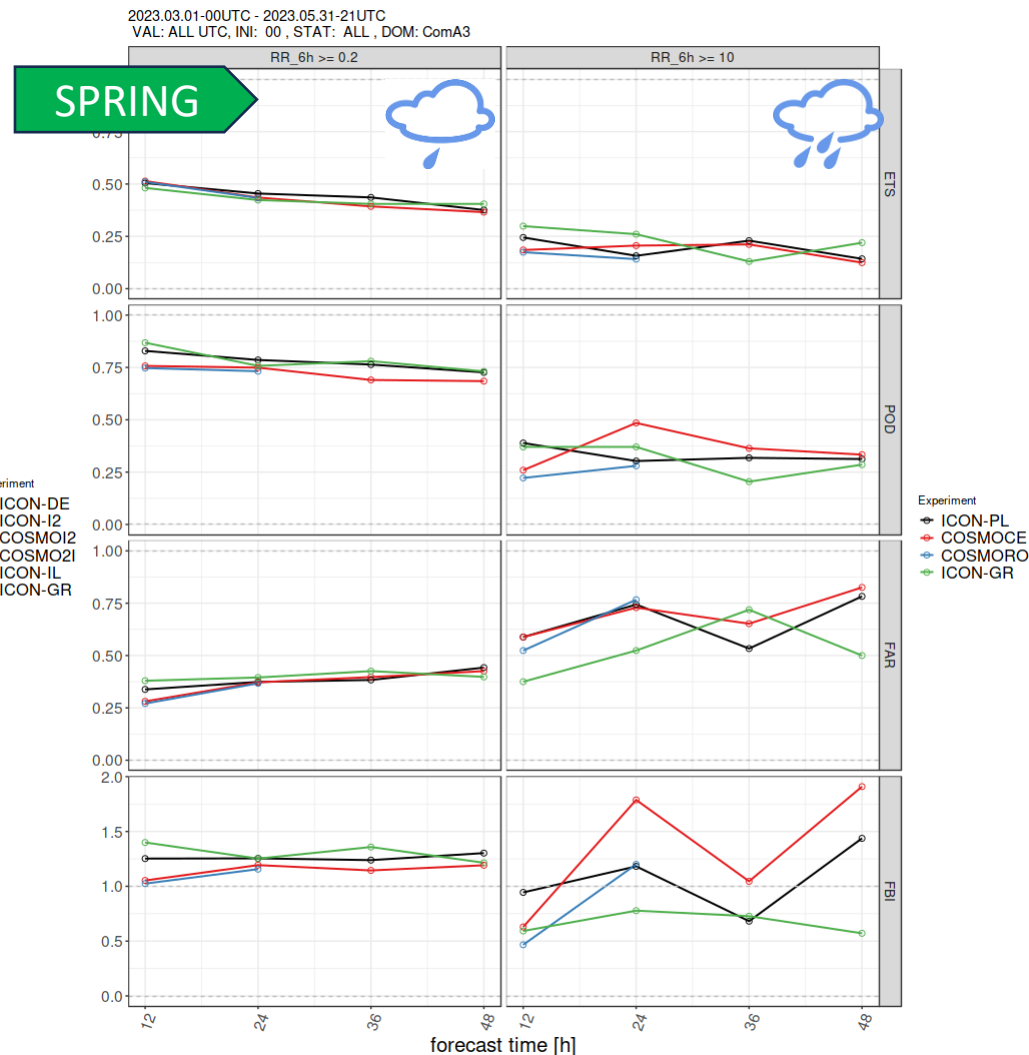

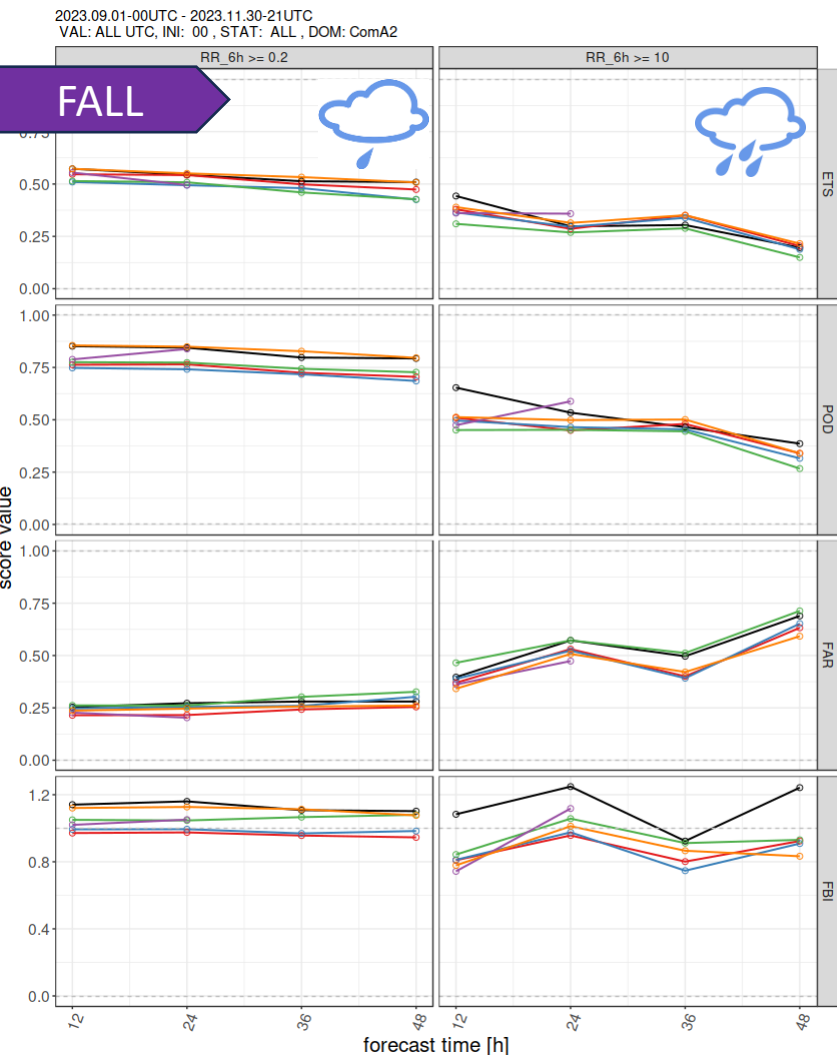

2023.12.01-00UTC - 2024.02.29-21UTC
VAL: ALL UTC, INI: 00, STAT: ALL, DOM: ComA2

- Clearer differences in performance in higher precipitation amounts
- MOD:** ETS, FAR are higher for **ICON** but with a tendency to underestimate small preci amounts

6h Precipitation

➤ Similar performance of all models for both seasons for small thresholds

SysEr: For higher amounts of preci, **ICON models seem drier with a tendency to underestimate mainly in summer.**

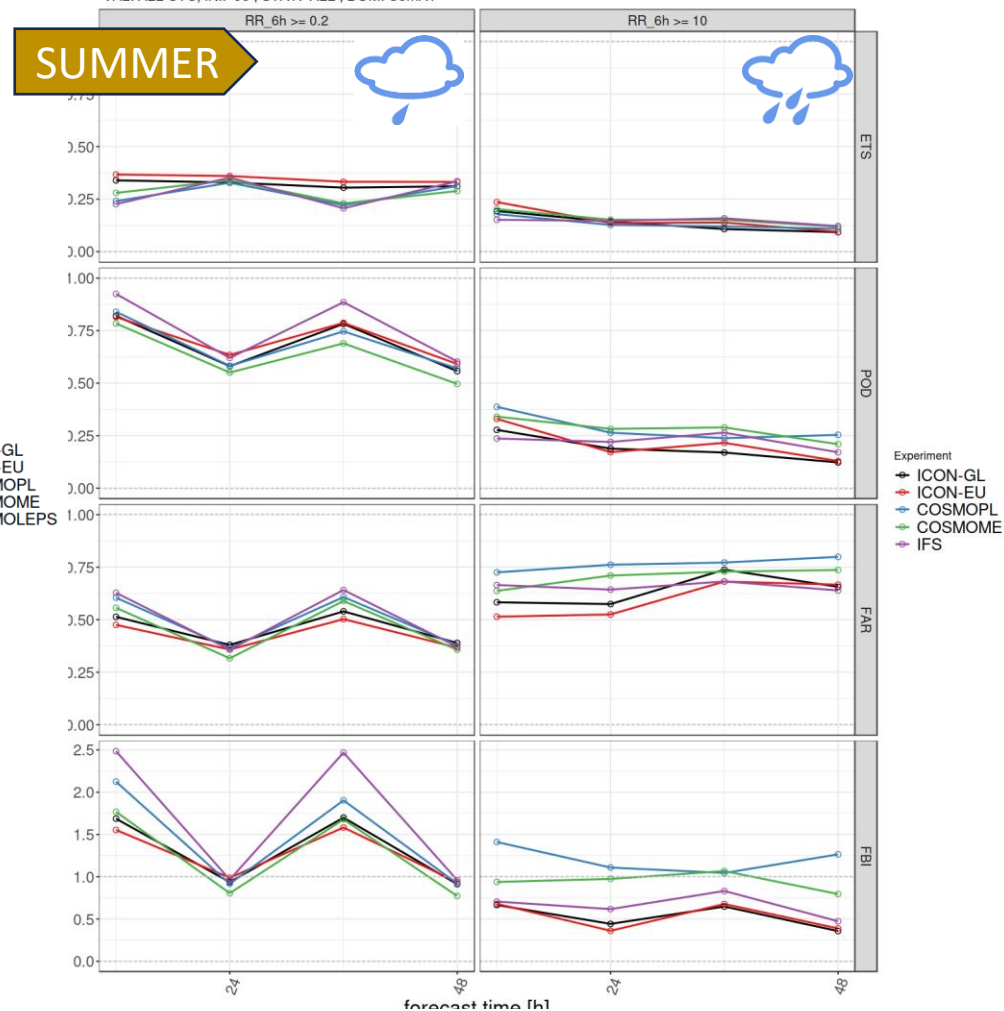

ModDp: Smaller POD but also smaller FAR in higher precipitation amounts

6h Precipitation

2023.01.01-00UTC - 2024.03.31-22UTC
VAL: ALL UTC, INI: 00, STAT: ALL, DOM: ComA1

2023.06.01-00UTC - 2023.09.15-21UTC
VAL: ALL UTC, INI: 00, STAT: ALL, DOM: ComA1

ModDp: Clear overprediction of small precipitation amounts with IFS compared to COSMO models for all seasons, linked also to higher POD and also higher FAR. For high precipitation amounts, ICON models overpredict and IFS underpredicts

Forecasts initialized from 2023/01/01 to 2024/03/31
Difference in POD [%], INI; 00UTC, SIGTEST: FALS

Forecasts initialized from 2023/01/01 to 2024/03/31
Difference in FAR [%], INI; 00UTC, SIGTEST: FALS

Forecasts initialized from 2023/01/01 to 2024/03/31
Difference in ETS [%], INI; 00UTC, SIGTEST: FALS

WG5

Time Series

2mT @12+24UTC: all COSMO/ICON ComA2. 2021-2024

Factorial timeseries linked to ME and RMSE, thicker lines represent the smoothed average. Used: `geom_smooth()` that adds a regression line to a plot, and it uses a `loess smooth` when there are fewer than 1000 observations, and a `GAM` when there are more.

ICON tendency to underestimate mainly in the winter night hours, much less than COSMO that underestimates at noon and overestimates at night (diurnal cycle minimized)

Winsp @12+24UTC: all COSMO/ICON ComA2, 2021-2024

Factorial timeseries linked to ME and RMSE, thicker lines represent the smoothed average. Used: `geom_smooth()` that adds a regression line to a plot, and it uses a `loess smooth` when there are fewer than 1000 observations, and a `GAM` when there are more.

Not clear change in performance with wind speed , tendency to underestimate mainly at night

TCC @12+24UTC: all COSMO/ICON ComA2, 2021-2024

Factorial timeseries linked to ME and RMSE, thicker lines represent the smoothed average. Used: `geom_smooth()` that adds a regression line to a plot, and it uses a `loess smooth` when there are fewer than 1000 observations, and a `GAM` when there are more.

Mean Error

Time series: TCC ME | Region: ComA2

Forecasting Period: 06/2021-05/2024 | 12:00 UTC

RMSE

Time series: TCC RMSE | Region: ComA2

Forecasting Period: 06/2021-05/2024 | 12:00 UTC

Mean Error

Time series: TCC ME | Region: ComA2

Forecasting Period: 06/2021-05/2024 | 24:00 UTC

RMSE

Time series: TCC RMSE | Region: ComA2

Forecasting Period: 06/2021-05/2024 | 24:00 UTC

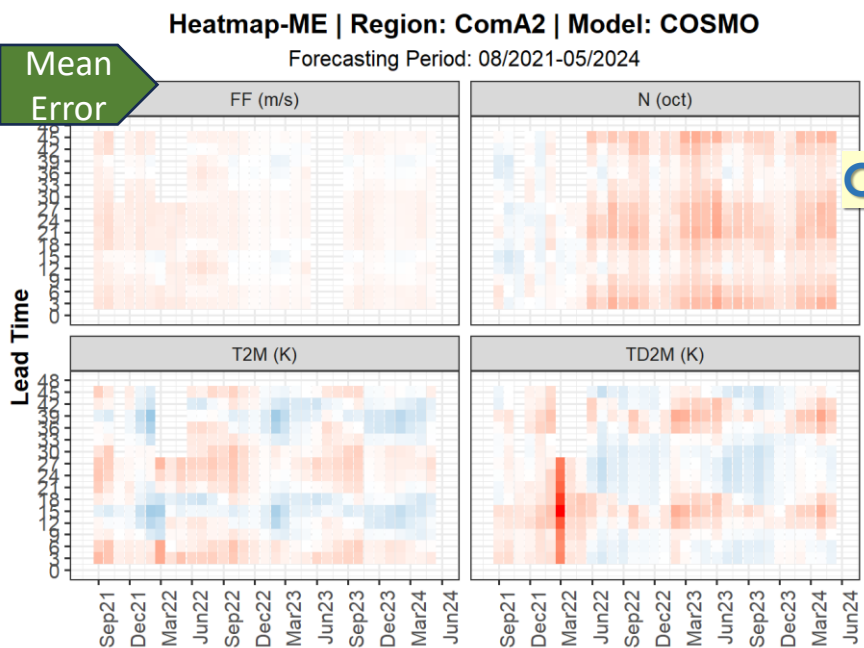

Ambiguous performance from RMSE, both models with a tendency to overestimate during warm months night hours.

WG5

Long-Term Trends

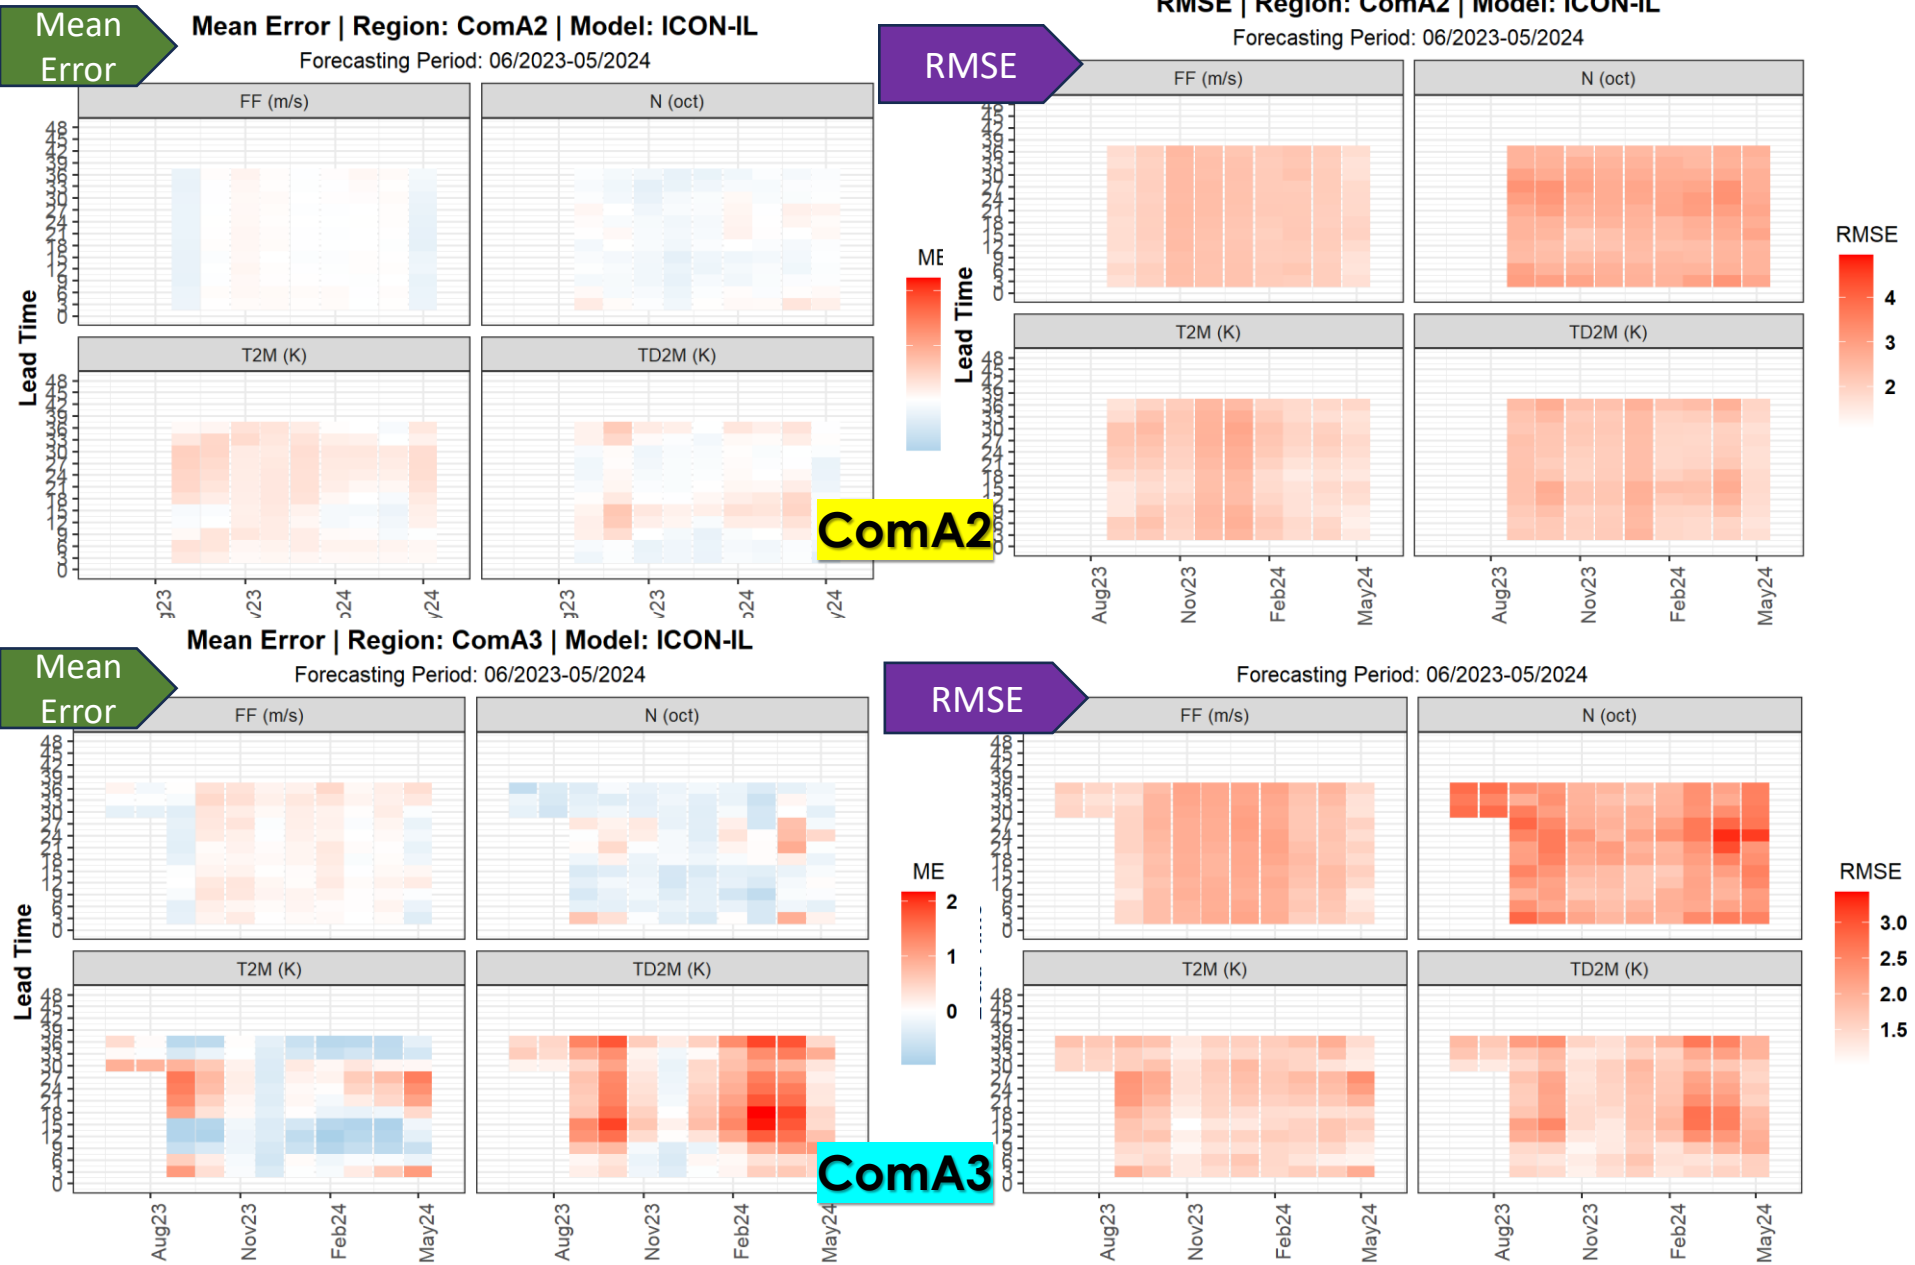

HeatMaps all COSMO/ICON ComA2, 2021-2024

HeatMaps **ICONGR** **ComA2** **ComA3**, 2023-2024

HeatMaps **ICON-IL** **ComA2** **ComA3**, 2023-2024

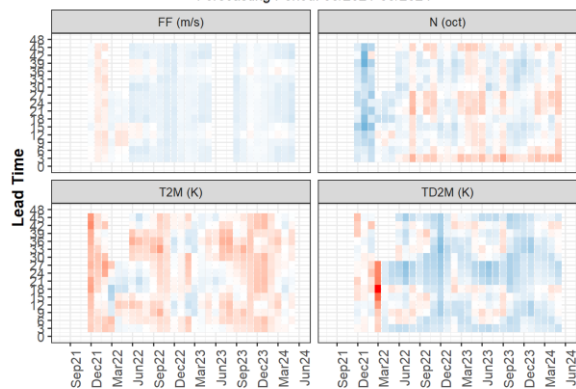

HeatMaps all models ComA2, 2021-2024

ICON

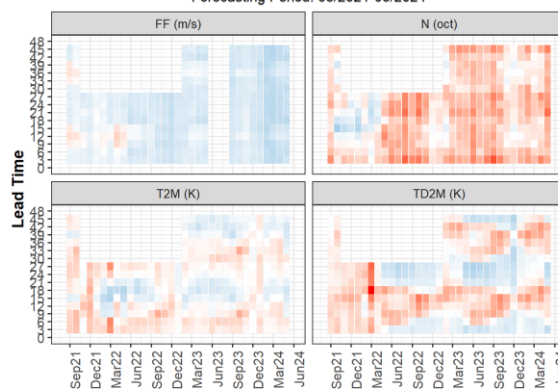

Mean Error | Region: ComA2 | Model: ICON-I2

Forecasting Period: 08/2021-05/2024

Mean Error | Region: ComA3 | Model: COSMORO

Forecasting Period: 06/2023-05/2024

Discussion on MODEL ERRORS

1st Meeting (Videoconference) 24.01.2024

Based on Common Area and National Domain verification results
Standard and Conditional Verification
Fuzzy on precipitation and TCC

Focus:

- Relative performance of COSMO/ICON implementations
- Reporting of systematic errors of ICON-LAMs (dependence on: season, hour, geographical location, weather, other parameters)
- Tuning on systematic model errors

Necessary to repeat such meetings on annual basis as the GM does not allow to focus on Common Plots extensively

**IDEAS for Content and Participants (other WGs)?
Timing?**

- ❑ **Common Plots analysis requires further attention to identify systematic errors and to be USEFUL**
- ❑ National domain analysis can be supplementary
- ❑ Necessary to tidy up CDSMO verification server for easier access
- ❑ Early preparation of plots will allow for a timely preparation before the GM
- ❑ New features of MEC/FFV2 can be tested (e.g. conditional verif on surface characteristics)
- ❑ Heatmaps and Time series plots can help identify gaps and errors easier but need effort to be utilized for the big number of models
- ❑ Possibility to add Performance diagrams in precipitation analysis
- ❑ EPS in common plots (can be discussed in joint meeting with WG7 @2pm (PP-CARMENS session))

...END
