1. General introduction/summary

5 min summary by each center (15-20 min total)

2. Open discussion

1. Common validation & comparisons: update?
1. data sharing needs:
 - Observations, examples: GTS, non-GTS conventional, RFI to DWD (cdfin: which domains, temporal availability), EUCOM / OPERA for LHN
 - LBC/IC: needs from DWD to share ICON-DREAM/ICON-FORCE
 - observations quality control: is someone pre-processing/checking the observations for specific quality controls? If so, how?
 - DA developments. Note: many devs for the reanalysis are part of the more general DA ones, so we would only focus on the ones needed only by the reanalysis and not the operational systems.

3. Conclusions/Next steps

Action points?
