Recent updates on the Best-Member approach using satellite data

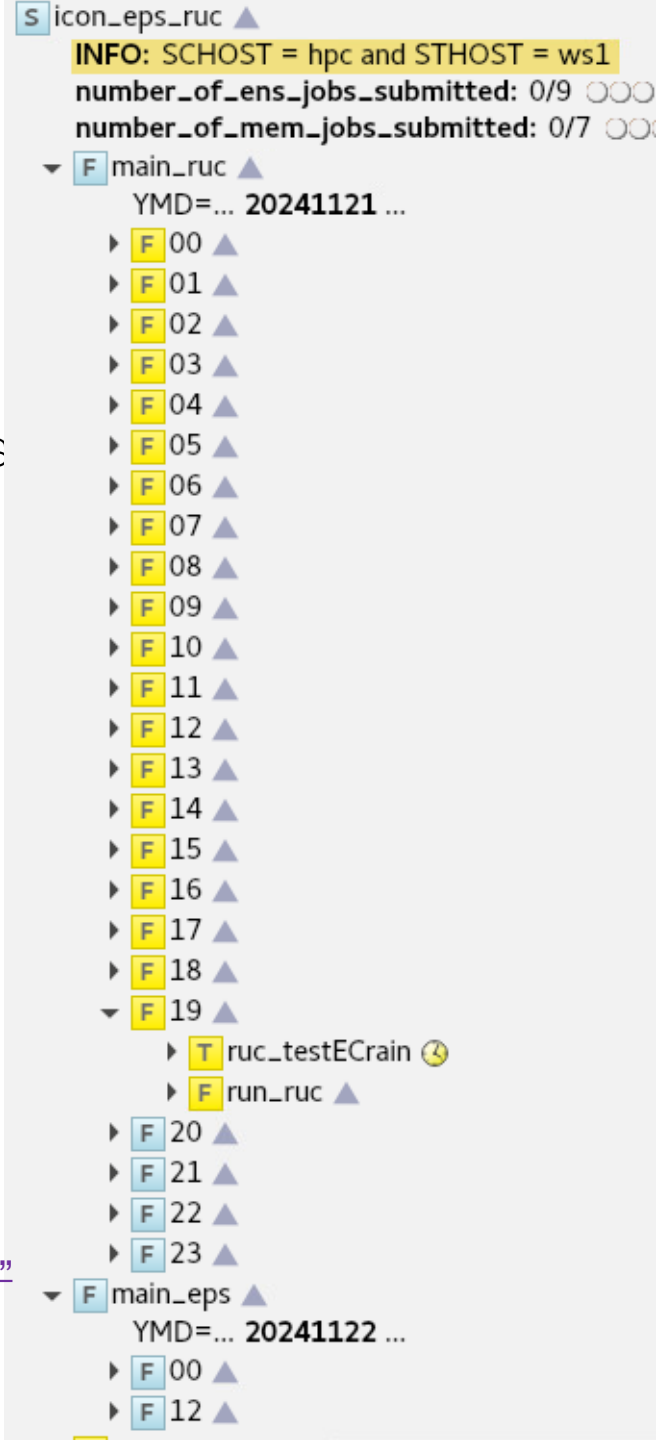

Pavel Khain, Amir Givati, Elyakom Vadislavsky, Yoav Levi
Israel Meteorological Service

Ensemble WG, GM 2026

Method

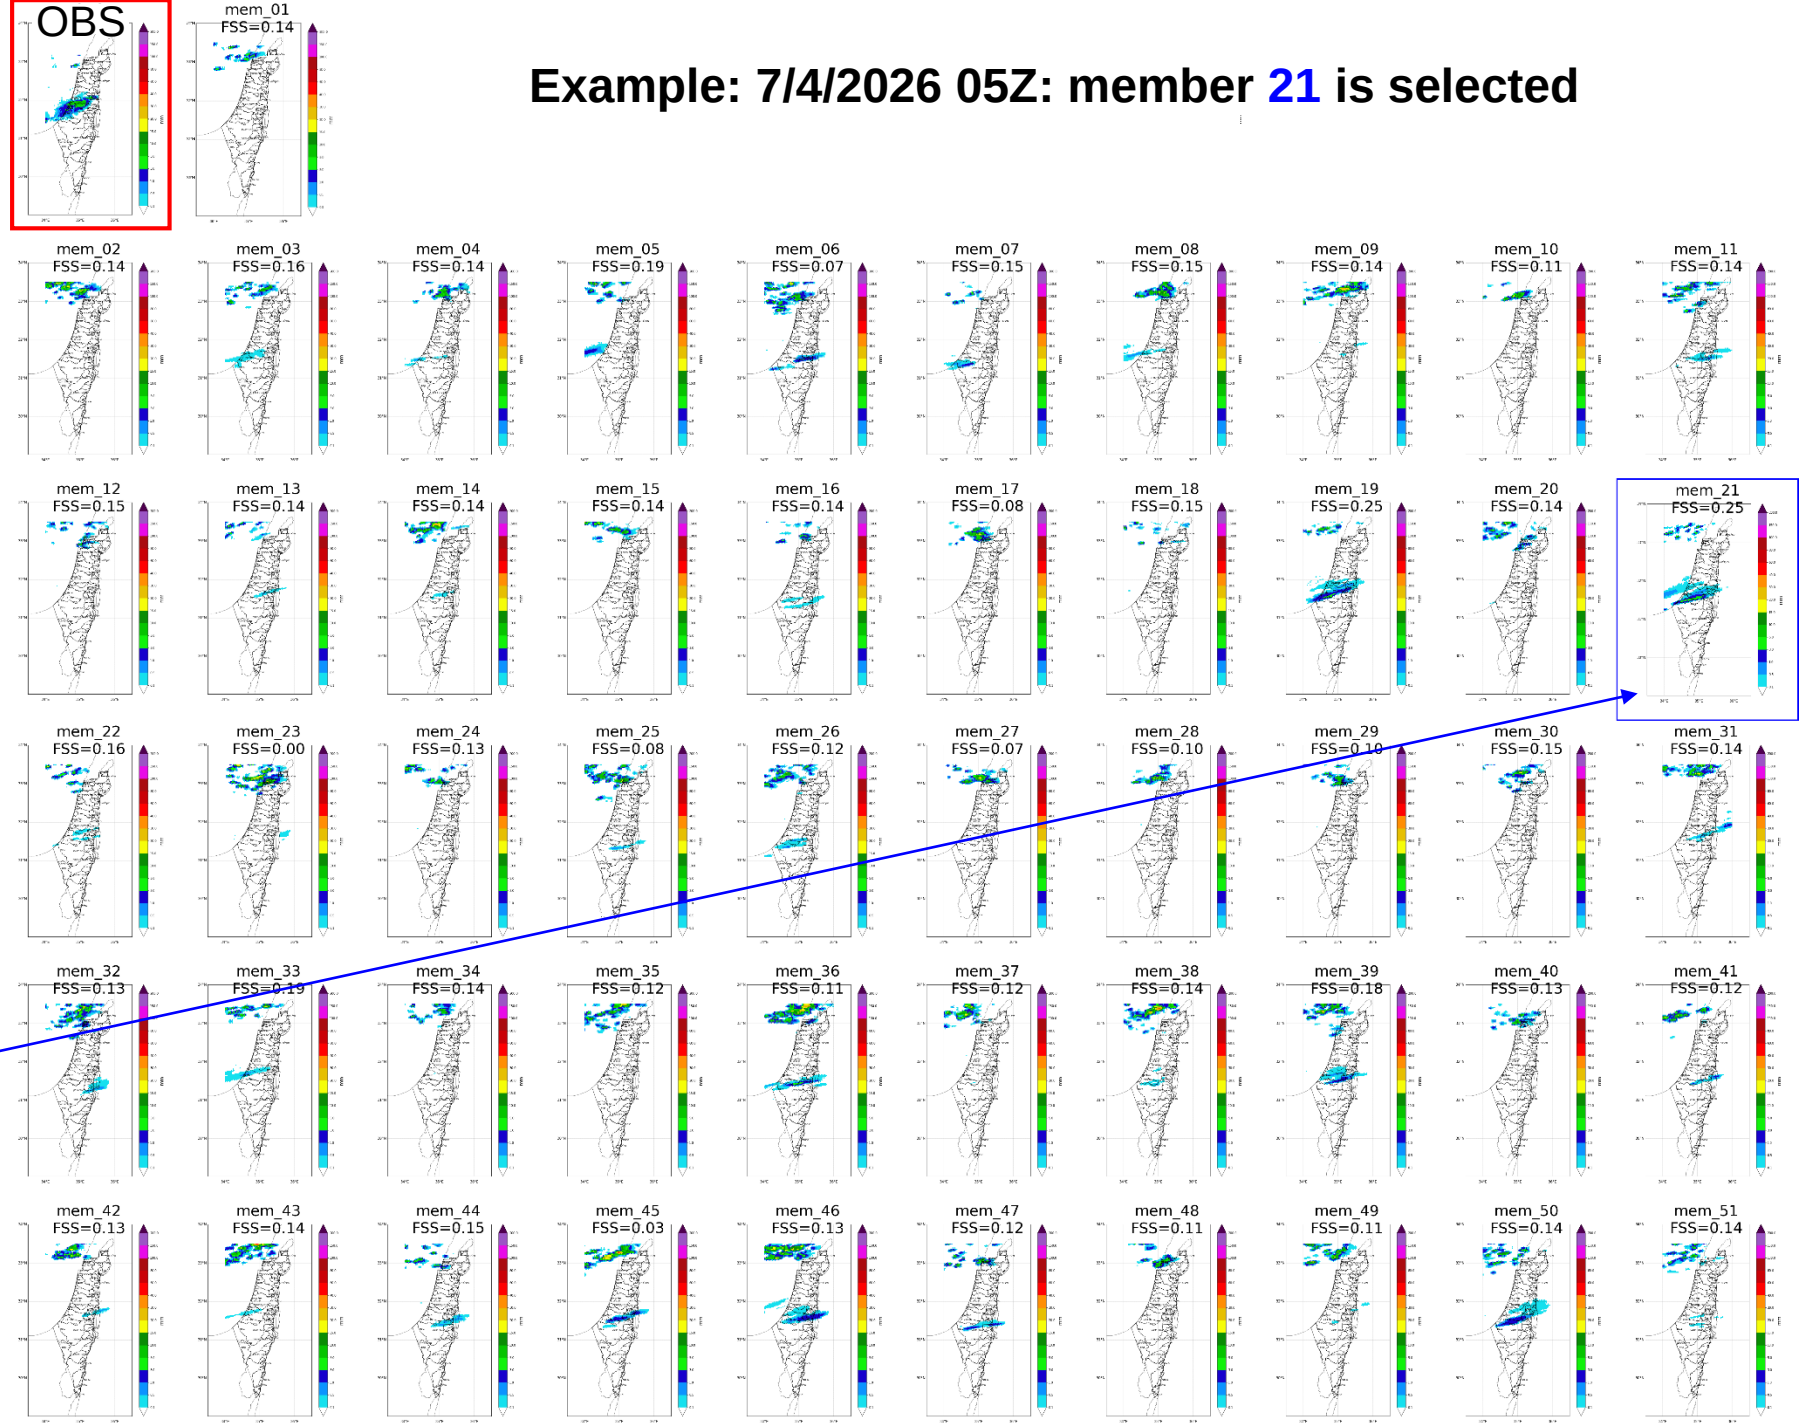

- Platform: ICON-EPS runs (ecFlow suite in Bologna) for rain nowcasting
- During rainy days (defined automatically by IFS forecast) ICON-EPS is running twice daily with **50 members**, driven by EC-ENS for 30 hours
- **Every hour**, all 50 ICON-EPS members are automatically verified versus the radar data during the last hour, using FSS, and the **best member** for the current hour is defined
- This member is rerun till that hour with radar-data assimilation (LHN) and then continued as free run for additional 12 hours
- This "best" member serves as our "deterministic" precipitation nowcast (also LPI and hail diagnostics)
- Includes: Urban scheme, Convective precipitation correction
- Recently:
  - ❑ all IMS deterministic models were added as optional “best members”
  - ❑ Lightning (ground measurements+MTG) helps choosing the “best member”
  - ❑ ~~EUMETSAT MTG FCI L2 AMV (Atmospheric Motion Vector) helps choosing the “best member”~~
  - ❑ MTG cloud top temperature
  - ❑ Radar DBZ

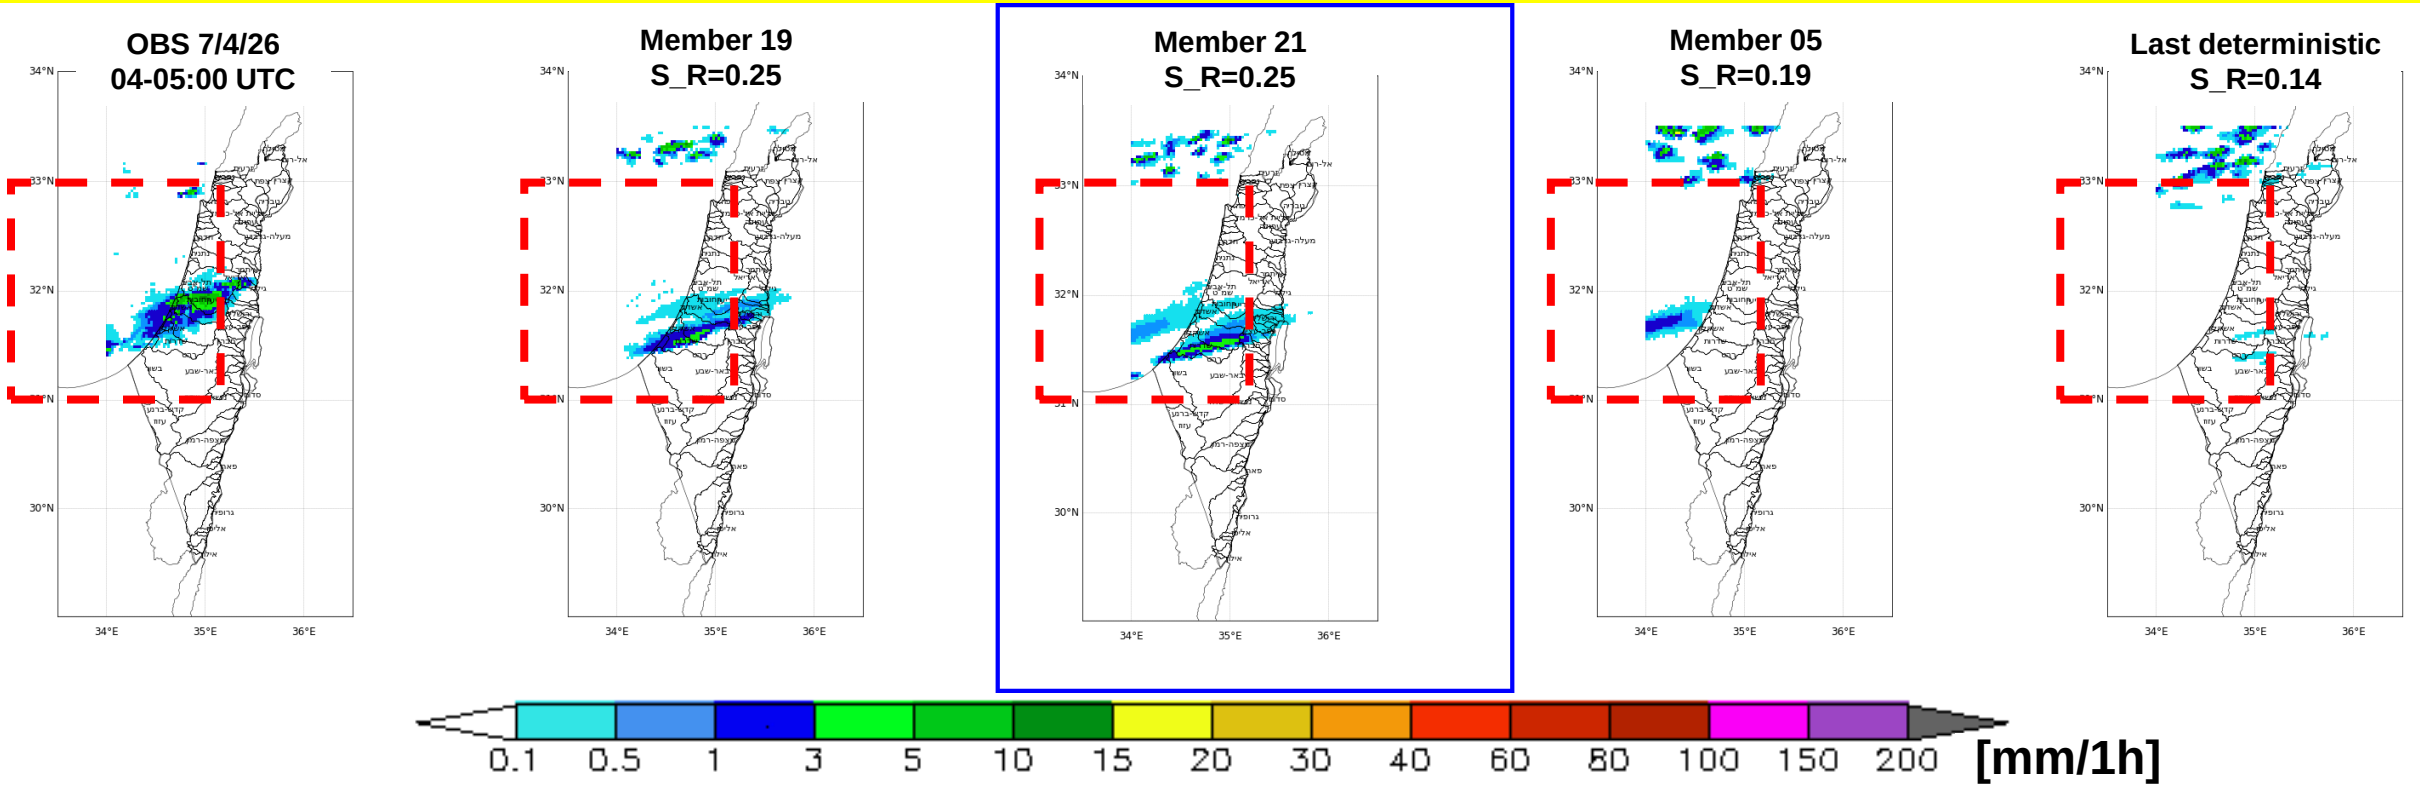

OBS during the last hour

Example: 7/4/2026 05Z: member 21 is selected

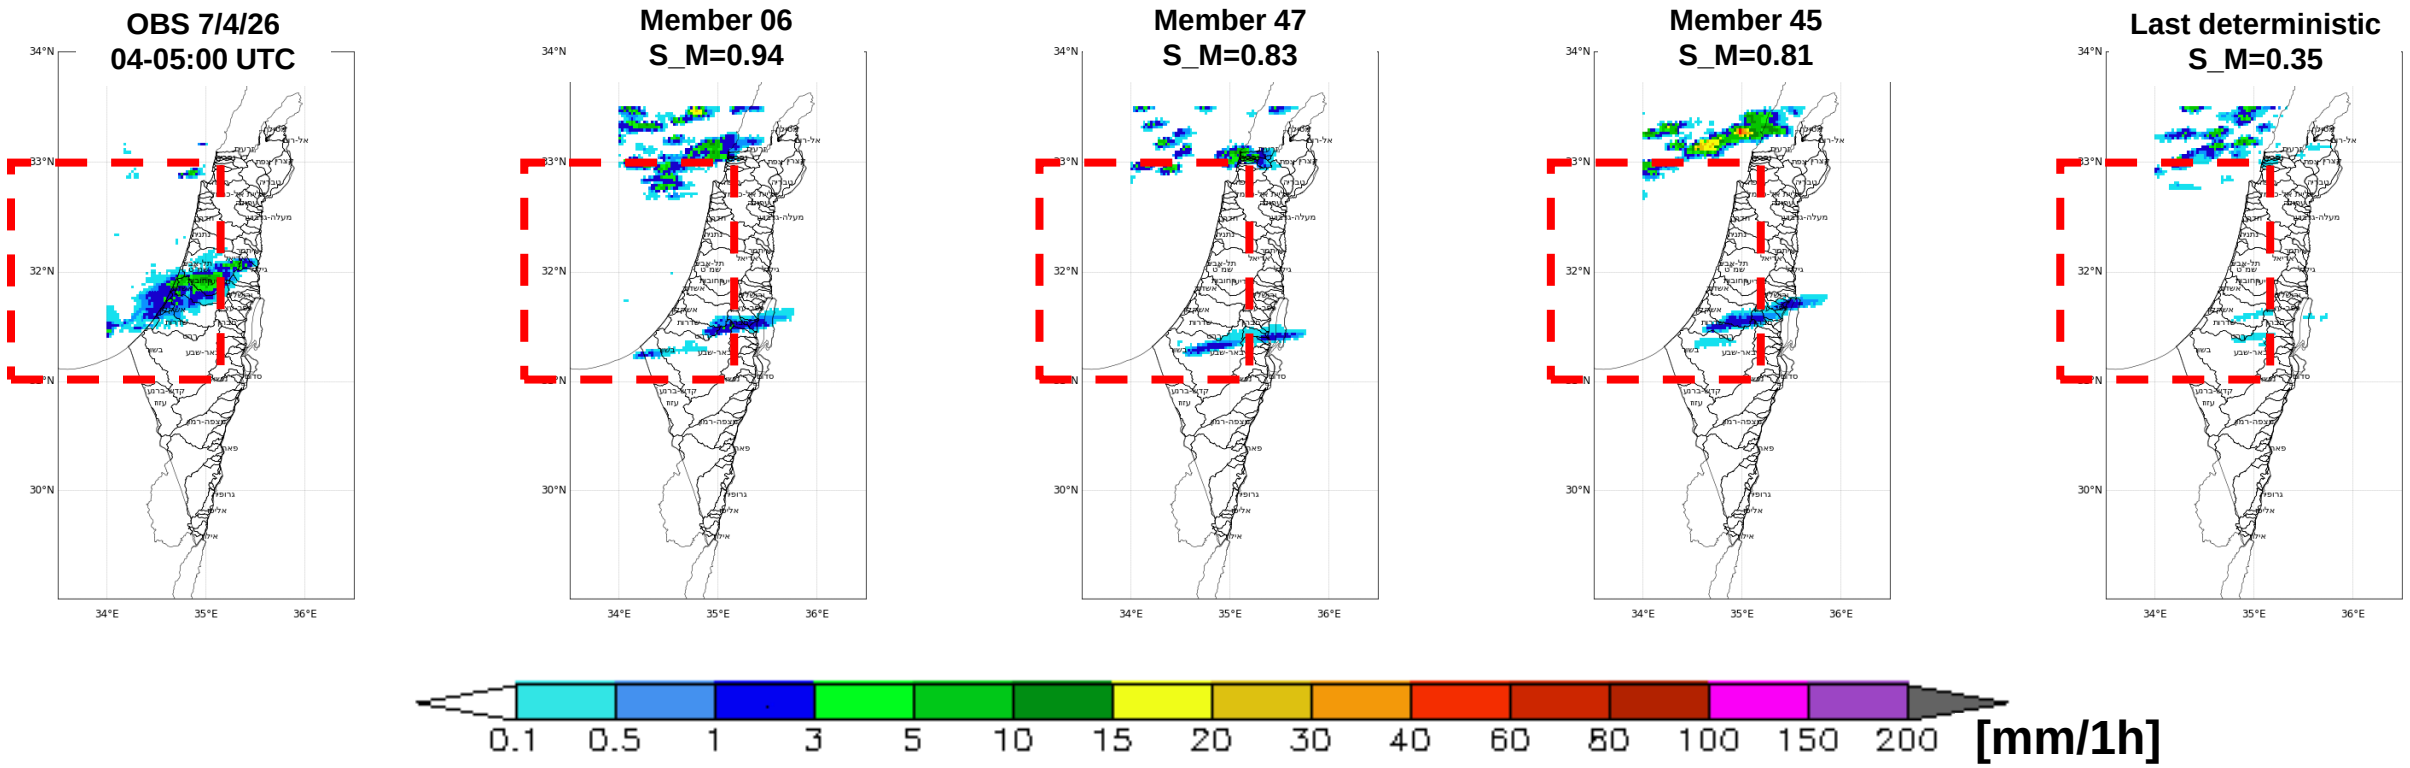

Best ensemble member during the last hour

Example: Precipitation score at 7/4/2026 05Z

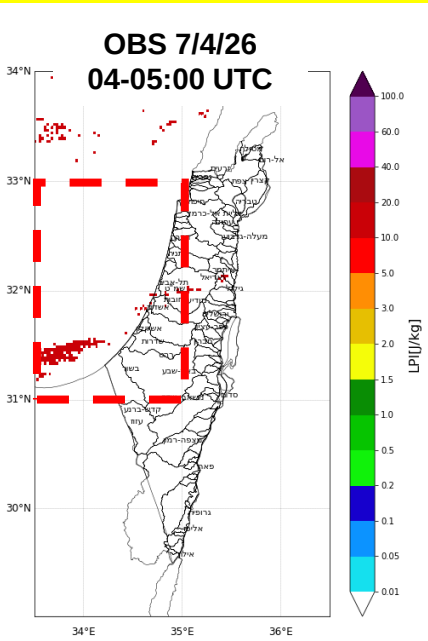

- Precipitation score S_R (based on RMSE over upscaled data), normalized over worst member
- Range: 0-1, the higher is better
- Above top three S_R are shown, as well as the deterministic

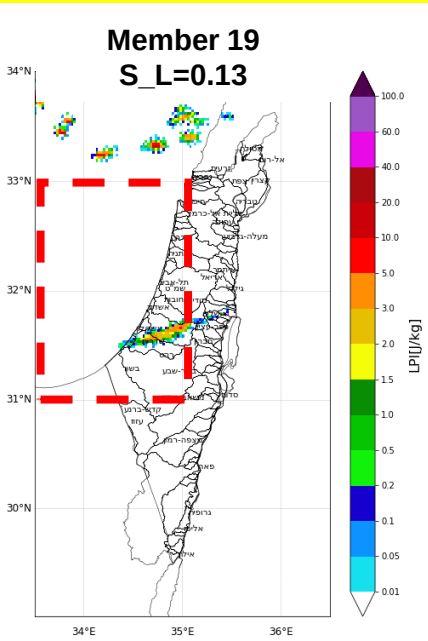

Example: Max Precipitation score at 7/4/2026 05Z

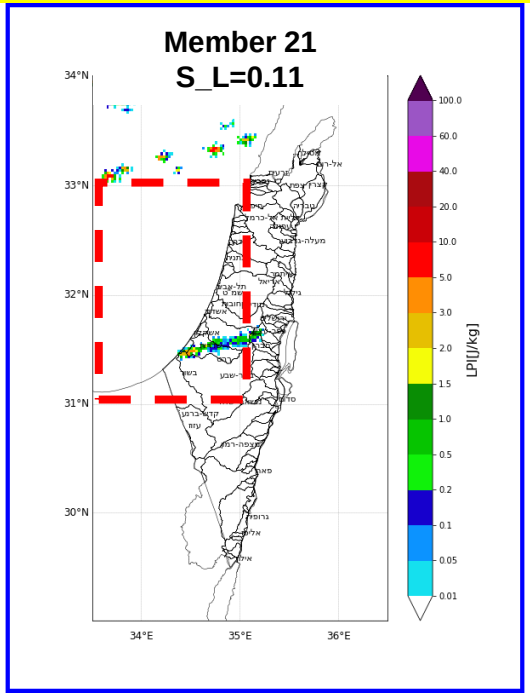

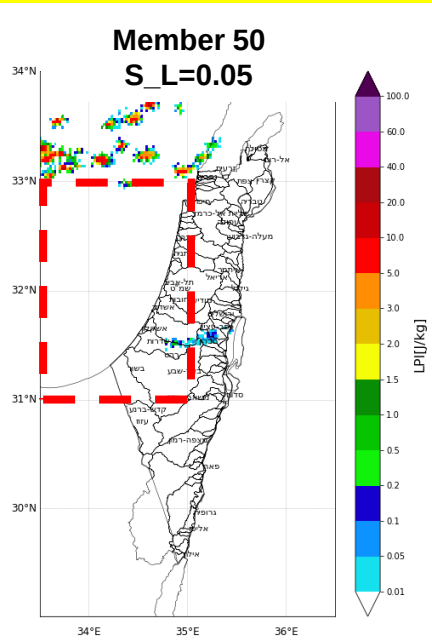

- Max Precipitation score S_M (based on absolute error of max values), normalized over worst member
- Range: 0-1, the higher is better
- Above top three S_M are shown, as well as the deterministic

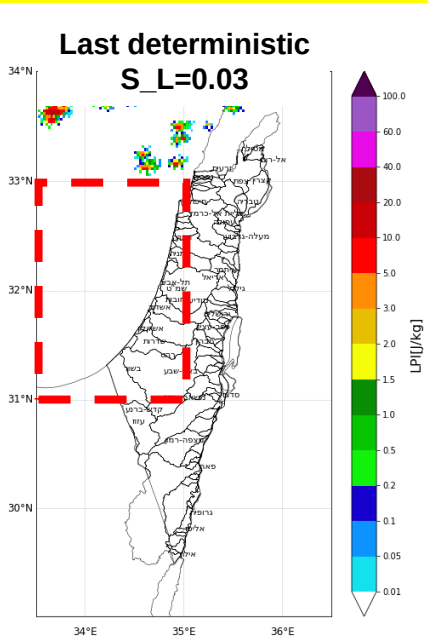

Example: Lightning score at 7/4/2026 05Z

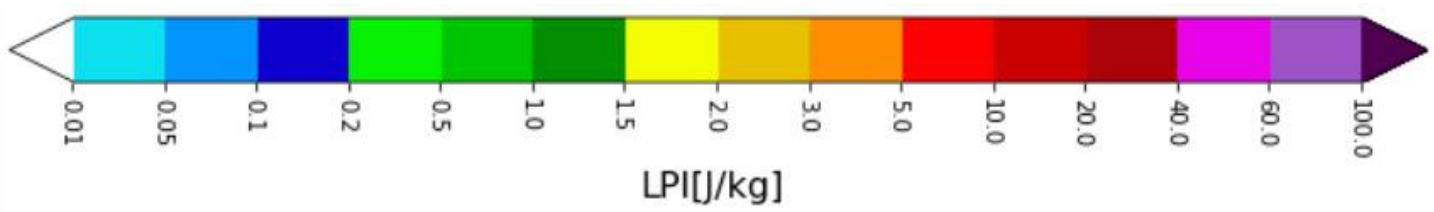

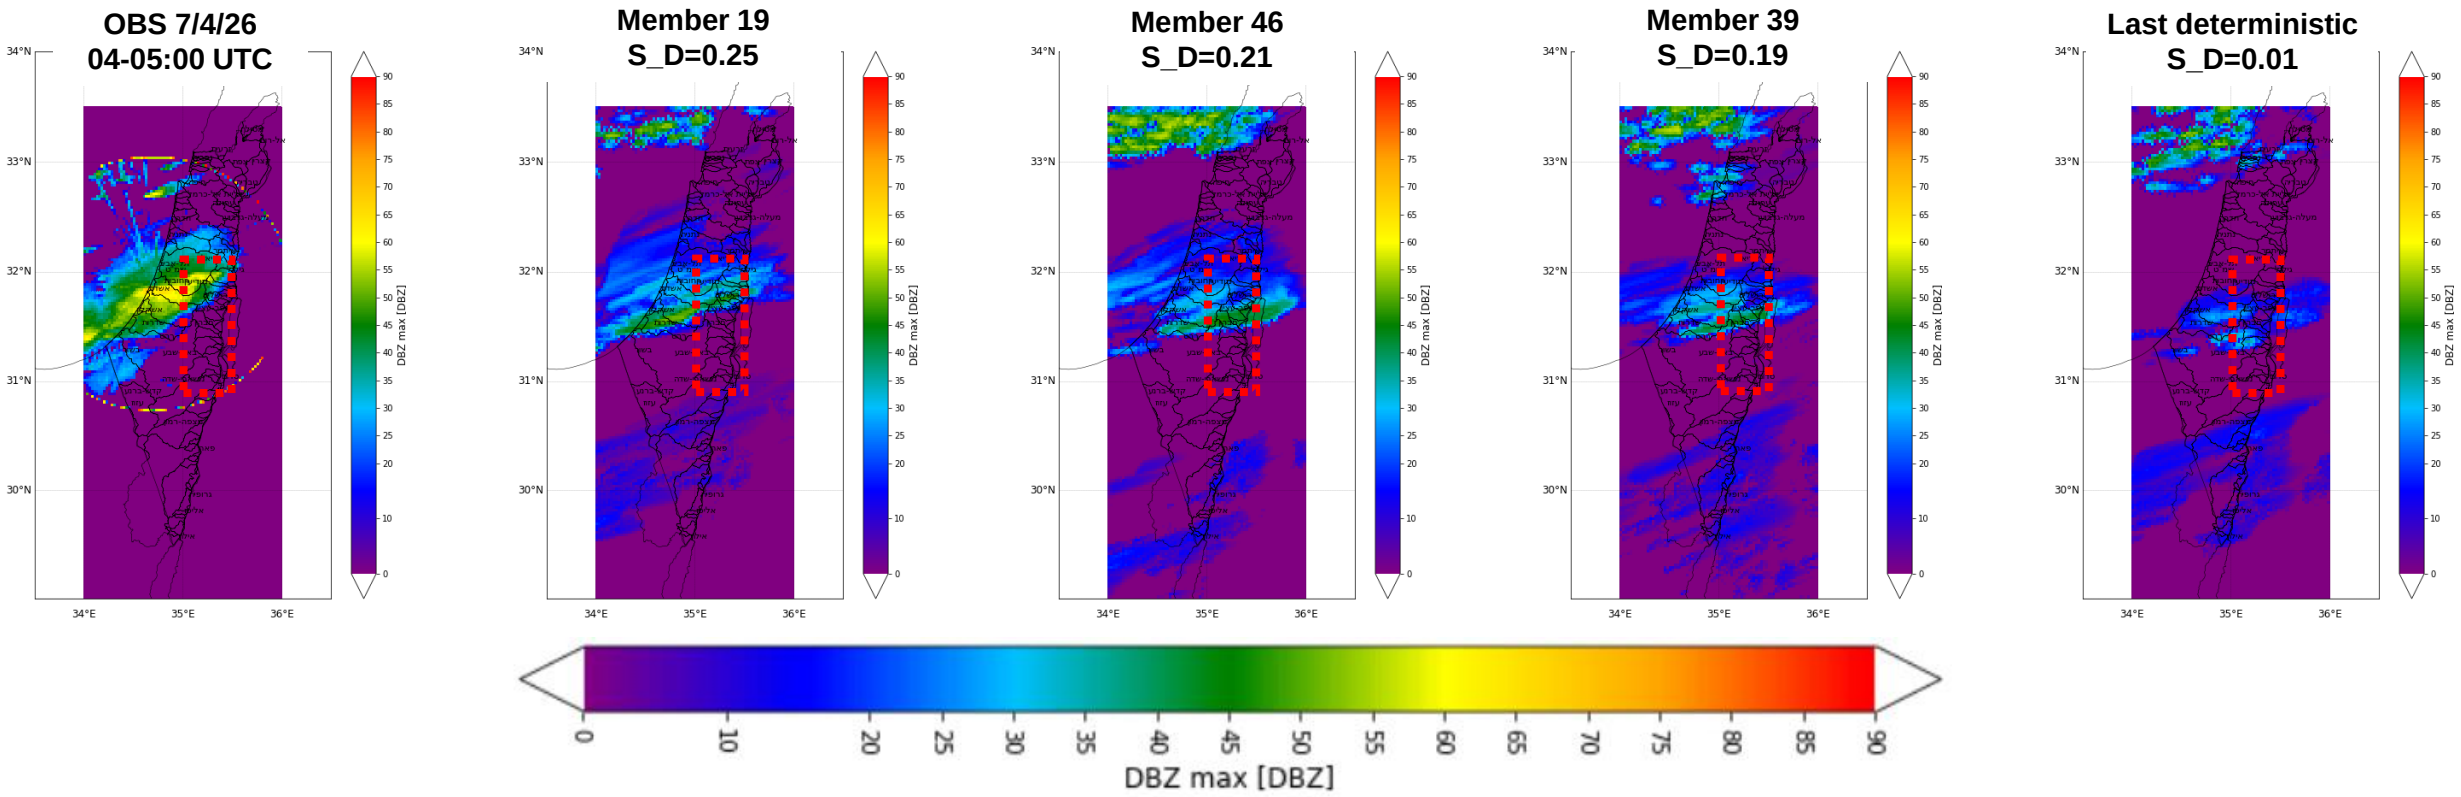

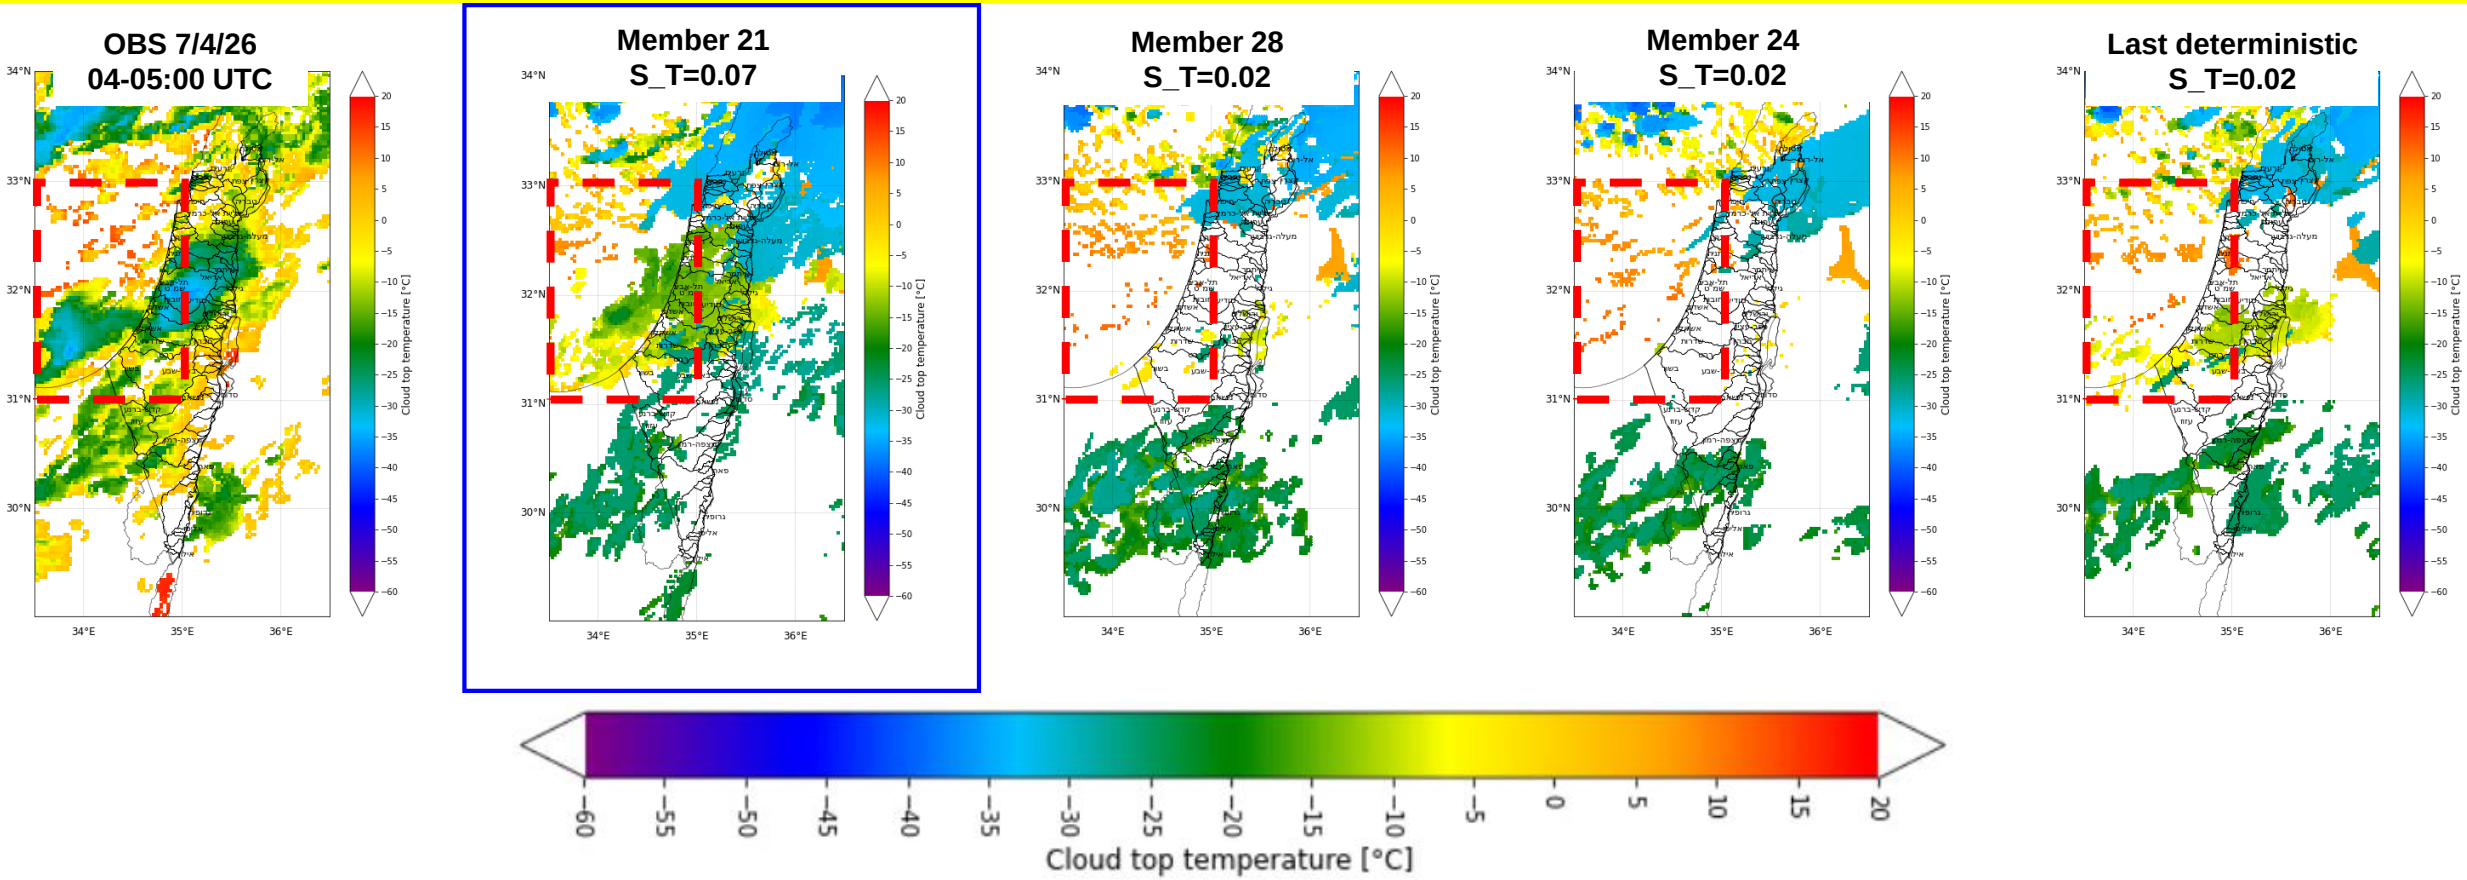

- Lightning score S_L (based on FSS vs ground measurements+MTG), normalized over worst member
- Range: 0-1, the higher is better
- Above top three S_L are shown, as well as the deterministic

Example: Max DBZ score at 7/4/2026 05Z

- Max DBZ score S_D (based on FSS, used over Judean dessert only), normalized over worst member
- Range: 0-1, the higher is better
- Above top three S_D are shown, as well as the deterministic

Example: Cloud top temperature score at 7/4/2026 05Z

- Cloud top temperature score S_T (based on FSS, thresh=5% of OBS temp), normalized over worst member
- Range: 0-1, the higher is better
- Above top three S_T are shown, as well as the deterministic

Final score calculation at 7/4/2026 05Z

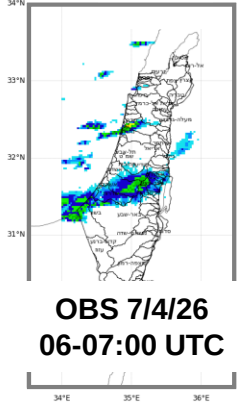

Score	Meaning	weight	Best 1	Best 2	Best 3	Best 4	Best 5
S_R	Precip. score	1	19	21	5	33	39
S_M	Max rain score	0.5	6	47	45	35	3
S_L	Lightning score	3	19	21	50	5	1
S_D	Max DBZ score	0	19	46	39	50	45
S_T	Cloud top temp	0.5	21	28	24	30	15
Final	**Weighted AVG**		**21**	**19**	**50**	**5**	**12**

FSS verification over many events

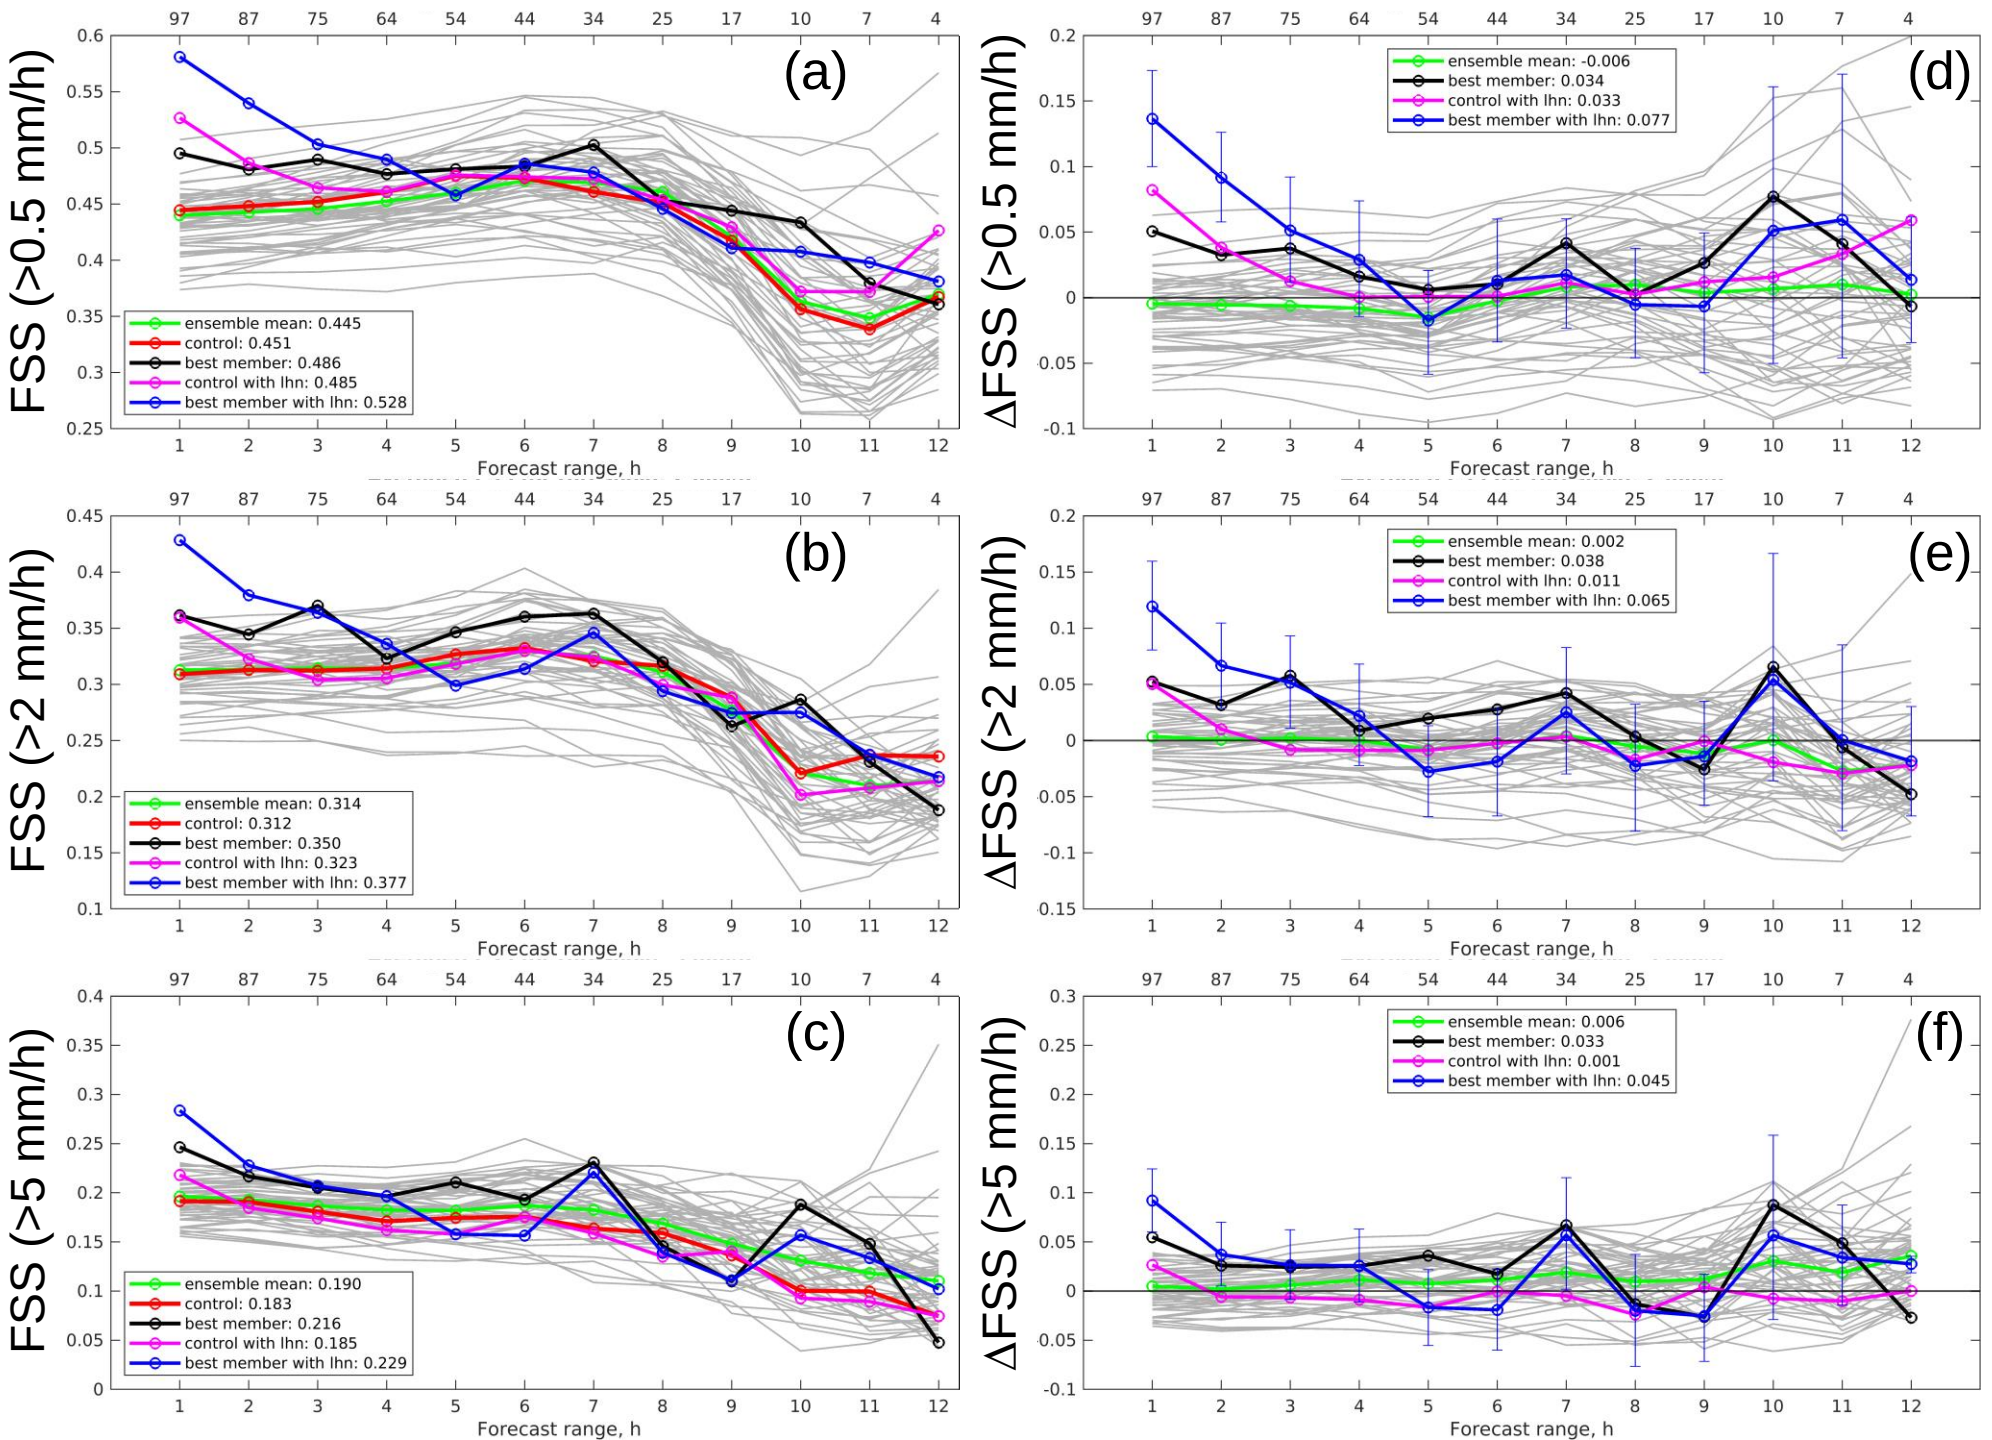

ICON best member is better than any other option for the first 4 hours!

FSS verification over many events

ICON best member is better than any other option for the first 4 hours!

Conclusions

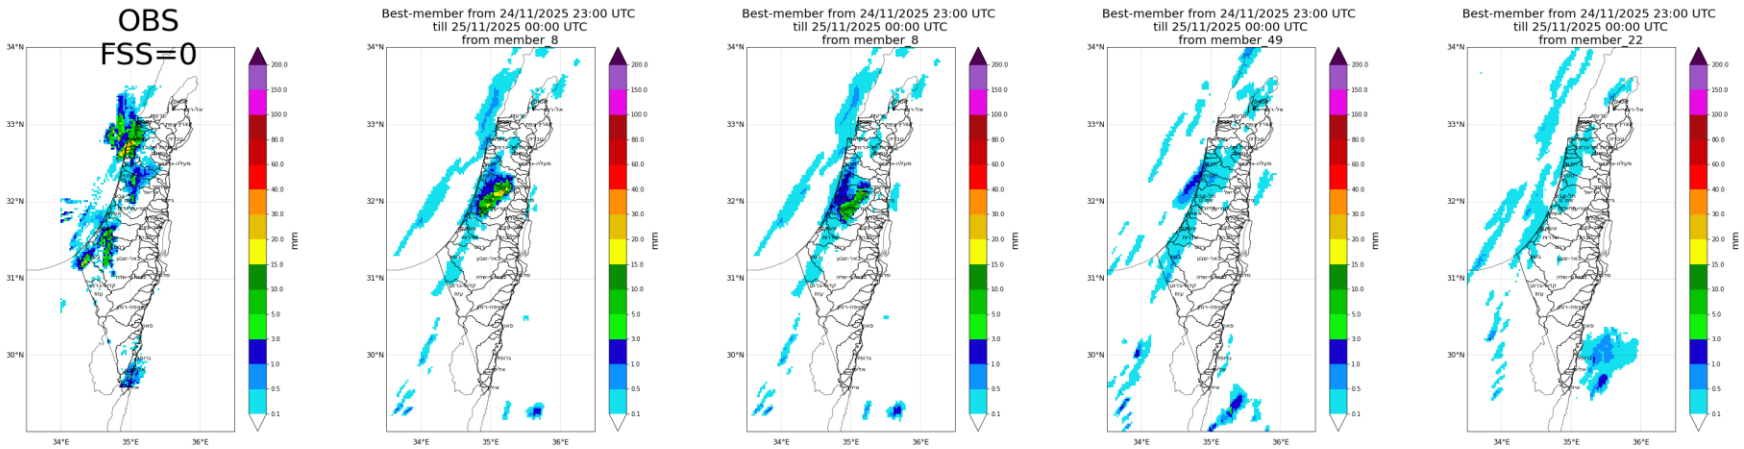

- ICON best ensemble member improves “deterministic” nowcasting of rain for the next 4 hours!

- A lot of open questions related to the choice of the current best ensemble member:
  - Metric?
  - Focus on entire area or strongest cells?
  - Time span to define the best member?
  - Met. Fields to define the best member?
  - New idea: run not only the best member, but an ensemble of several winners!
