Physically based stochastic perturbations for boundary layer turbulence :  
PSP (Kober and Craig, 2016)

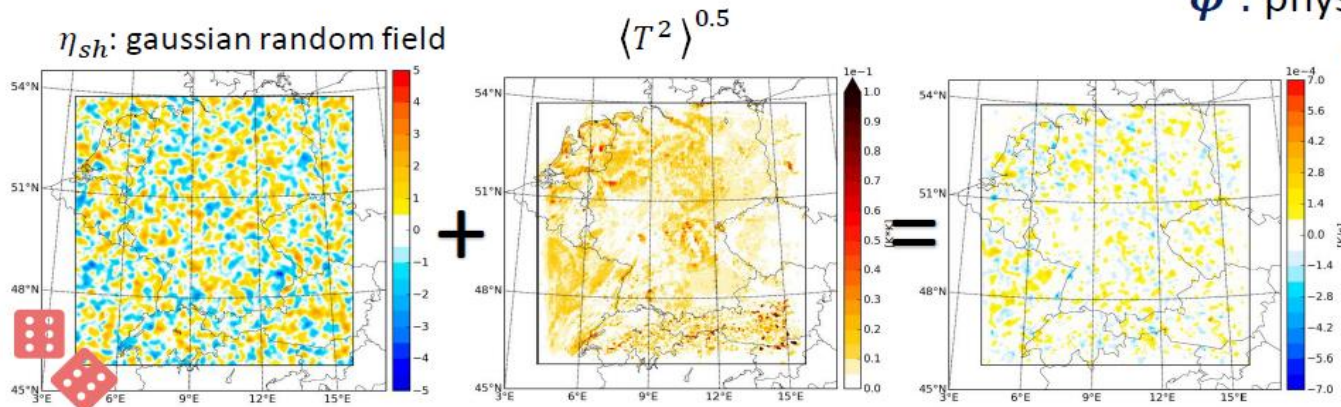

$$\left(\frac{\partial \phi}{\partial t}\right)_{all} = \frac{\partial \phi}{\partial t} + \underbrace{\alpha \cdot \eta}_{\text{Stochastic perturbations}} \cdot \sqrt{\overline{\phi'^2}}$$

$\phi = \{T, q, w\}$

$\eta(t, \sigma)$ : Random field , regenerated every 10 min with spatial correlation  $\sigma$

$\alpha$ : perturbation ampl., scaling factors

$\phi'$ : physical scaling/subgrid-scale variance of variable  $\phi$

(Kober and Craig, 2016)

## Modifications for improved physical consistency → PSP2

(Hirt et al., 2019, MWR)

- **Autoregressive Process**: Continuously modifying  $\eta$  at every time step, but temporally correlated:

$$\eta_t = \sigma_t \cdot \eta_{t-1} + \epsilon_t$$

- Constraining the perturbations to the boundary layer (HPBLcut)
  - Reduce impact of perturbations at night
  - Scheme developed for buoyant turbulence, not shear (vertically correlated perturbations)

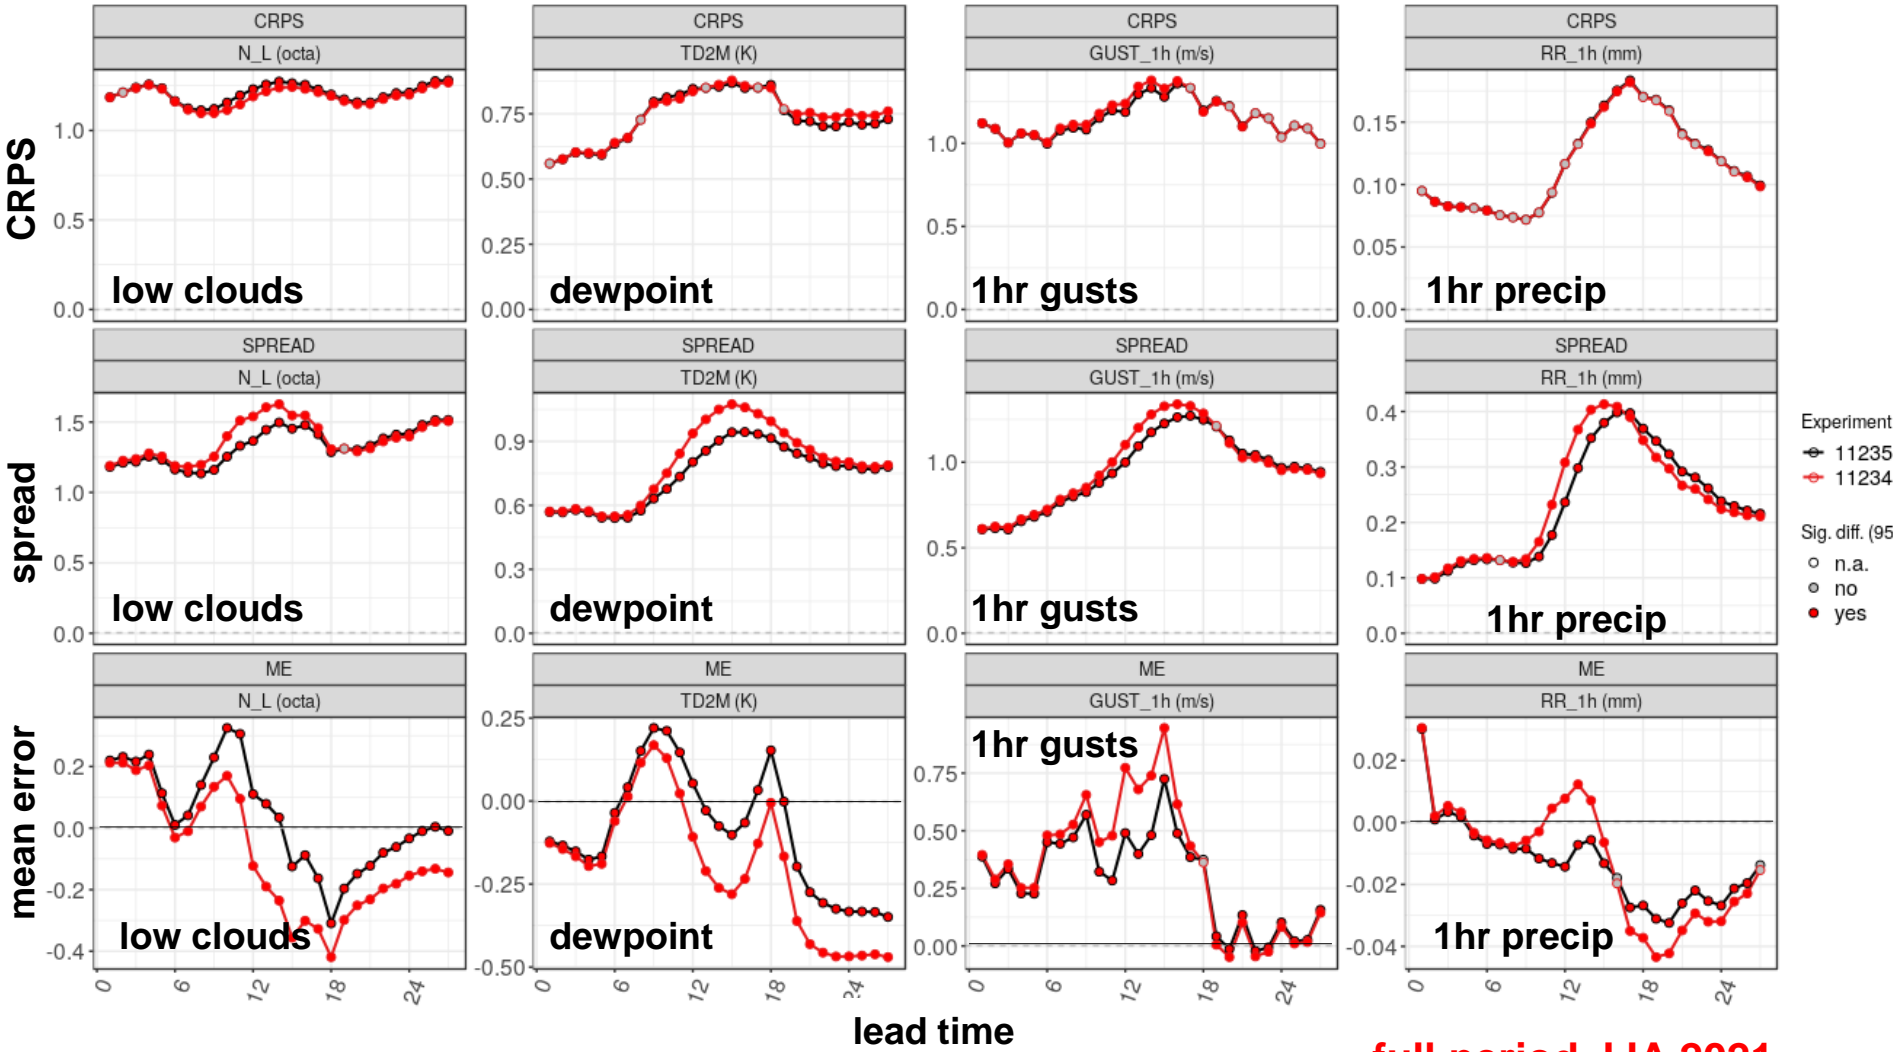

## Physically based stochastic perturbations for boundary layer turbulence (PSP2)

- cooperation with Ludwig-Maximilians-Universität in Munich (LMU)
- @COSMO GM 2021:
  - BACY tests for a short period in August 2020 with ICON-D2-EPS
  - Test run from May 26<sup>th</sup> to August 1<sup>st</sup> 2021 at DWD
- New @ICCARUS 2022
  - Increased period to August 31<sup>st</sup> 2021
  - Evaluation conditional on weak and strong forcing
  - Very first steps towards dealing with degradation for some variables
  - Next steps

2021/05/26 22UTC - 2021/08/31 21UTC  
 INI: 00 UTC, DOM: ALL

— PSP2 — reference

00 UTC runs

full period JJA 2021

- Synoptic forcing classification using the **convective adjustment timescale**  $\tau_c$ , an indicator of predictability of convective precipitation (Keil et al., 2014):
  - Upper 20% (13) of daily averaged  $\tau_c$ : **weak forcing**.
  - Lower 20% (13) of daily averaged  $\tau_c$ : **strong forcing**.

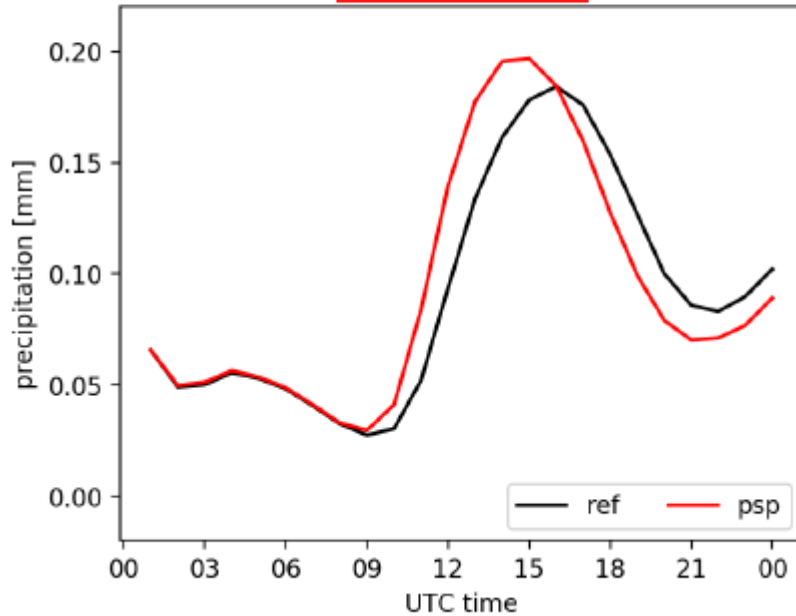

M .Puh, LMU

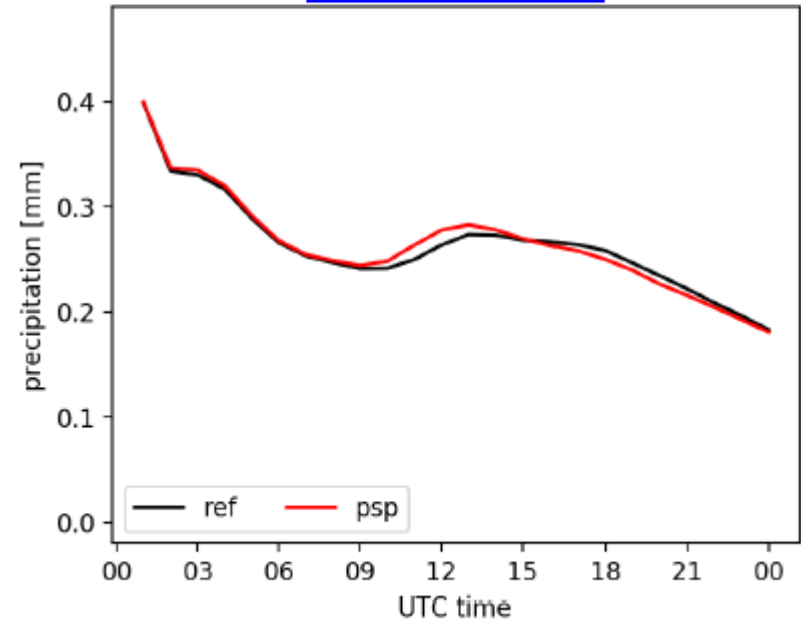

**upper 20%**  
(13 days)

**lower 20%**  
(13 days)

Composite of average hourly precipitation,  
**WEAK FORCING**

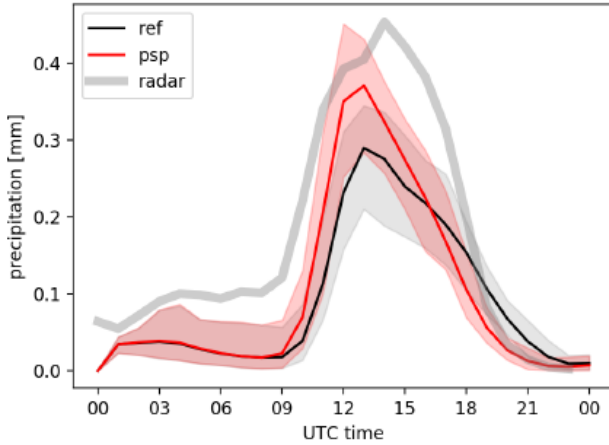

Composite of average hourly precipitation,  
**STRONG FORCING**

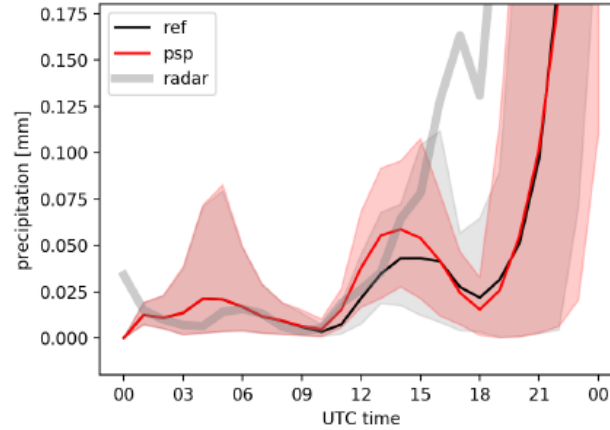

M .Puh, LMU

## Selected cases weak forcing

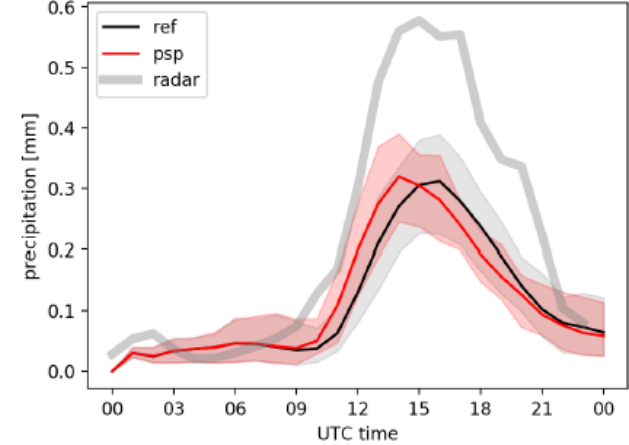

Domain averaged hourly precipitation, 09-06-2021

Domain averaged hourly precipitation, 19-06-2021

Domain averaged hourly precipitation, 26-07-2021

M .Puh, LMU

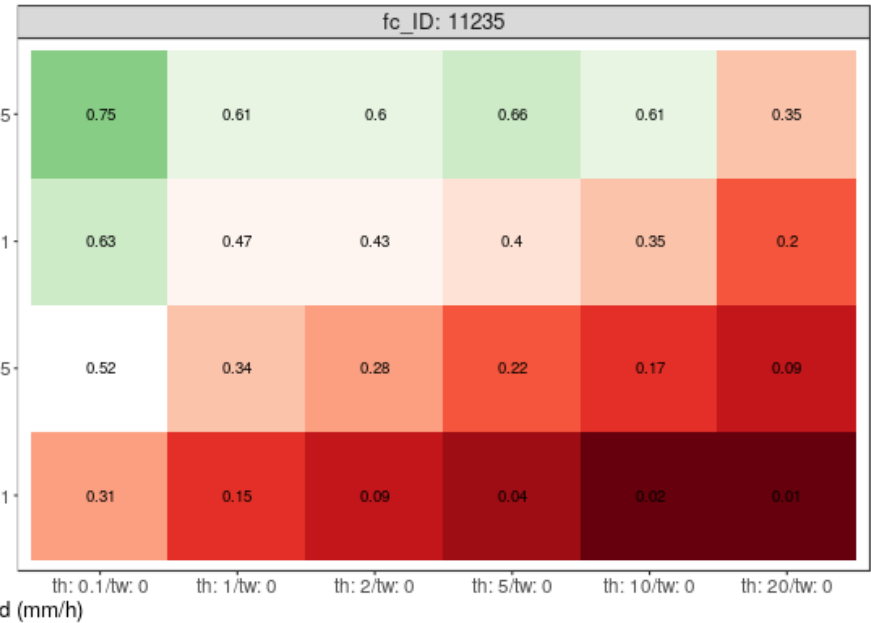

# FSS of precipitation using radar estimates

## Next steps

- make tests to further investigate deficiencies
- make tests closer to operational setting (i.e. initial and boundary conditions)
- further evaluations/verifications, i.e. FSS based on quantile threshold
- paper in preparation
- long-term goal: implement a version which is a candidate for operational implementation in ICON-D2-EPS
